data and storing user specified normative standard character text information of said information in said created character text sectional components,

wherein said character text components may include encrypted content wherein said encrypted content has the ability to be decrypted, and

wherein with a set of machine readable instructions in a computer-readable computing device's system, said character text components are processed in an automated fashion by said computer within said computing device's system, and

wherein with visual perception by a human user in said computing device's system said character text components are interacted upon and processed in a manual fashion by said user;

and, if user specified, additional sectional components wherein said character text formatted data comprises any of the following:

- scripting text,
- rich text,
- markup language text,
- compressed data text,
- [IEE*] Uniform Resource Locator (URL) character text,
- [IEE*] encoded data text,
- [IEE*] embedded data text of any type including that of the inscribed herein securable independent electronic document type,
- any other character text;

wherein said additional sectional components adapted for the storage of any of the following data types:

- character-based data-said character text comprising scripting text, rich text, markup language text, or other character text
- wherein said character text has the ability to include one or more of the following:

an character text Uniform Resource Locator (URL);

-----compressed data

wherein said compressed data comprising encrypted or embedded data of any type including that of the

intrinsic security feature data;
document type;

graphical image data;
raw binary data;

intrinsic security feature data;
container-based binary-based digital signature data;
any other non-specific data;

wherein with the creation of and population of said information in said container, said container includes at least one overall intrinsic data integrity hash check value;

wherein with said computing device system's automated interfacing of said graphical image container as binary file formatted type data in a direct non-altered single byte precision original "incrementally-filed" data handling and storage method, having said character text sectional components encapsulated in said binary file container, allows said encapsulated character text formatted data to sustain its original sequential filed data form, and

wherein said container's sectional component's creation and processing is independent of said container's creation and processing, and

wherein said sectional component's handling-intrinsic security feature data wherein coupling of said sectional component's security feature data generates and handles intrinsic security feature data associated creation and processing integrity is intervention independent of said container's association, and

wherein said intrinsic data or said sectional data is stored in any one of said sectional components or said sectional component;

wherein said sectional interface as binary file formatted type data in a direct non-altered, single byte precision original "incrementally-filed" data handling and storage method, whereby image and character text sectional component association in said binary document container allows said character text to sustain its original sequential filed data form; and

wherein independent creation and processing of said container from said sectional component's creation and processing; and

wherein integrity enhanced non-associated creation and processing intervention from said sectional component's creation and processing; and

wherein said normative standard adapted sectional component's intrinsic security feature information coupling of said sectional component's security channel information with data integrity is enhanced with the inclusion or coupling of other said sectional component's intrinsic security channel information, feature data, and

wherein said normative standard graphic image container and said normative standard adapted character test sectional components further allows the electronic document

integrity enhanced intervention and association control of processing and storage from non-desired additional parties,

independent interaction of processing and storage from non-desired additional parties,

independent validation of processing and storage from non-desired additional parties, and

independent processing of and storage in said machine computing device's readable instruction's computing platform.

2. (CORRECTED AMENDED) The method for the creation of an electronic document for securing information exchange of claim 1, wherein the said normative standard character test based adapted sectional components include digital signature sectional component(s) include signatures of one or more of the following types information data of a type of any of the following:

- (i) signature;
- (ii) co-signature;
- (iii) counter-signature.

3. (CORRECTED AMENDED) The method for the creation of an electronic document for securing information exchange of claim 2, wherein said document contains the method further comprises a step of creating one or more additional sectional components adapted for the storage of said normative non-specified standard graphical image container based binary encoded digital signature formatted data and storing in said additional sectional components said container based binary encoded digital signature formatted data, wherein said binary encoded container based digital signature sectional component(s) include signatures of one or more of the following type information data is of a type of any of the following:

- (i) signature;
- (ii) co-signature;
- (iii) counter-signature.

(THIS LISTING IS THE CORRECT AND COMPLETE TEXT OF THE CLAIMS AS OF 7/26/19)

CLAIMS: Latest as of 7/26/2019 #1 = Independent, #2 thru #4 = Dependant)

1. A method for the creation of an electronic document supporting specific platform and nonessential party independence for securing information exchange, tangibly embodied in a computer readable storage medium, the method, using a computing device, for securing the exchange of information within the securable independent electronic document comprises the steps of:

creating a normative standard graphical image based container adapted for sectional components,

populating the sectional component container with said information using, in a user specified order, the steps of:

creating one or more graphical image sectional components adapted for the storage of normative standard graphical image based formatted data of said graphical image container type and storing user specified normative standard graphical image information data of said information in said created graphical image sectional components,

wherein said graphical image components may include encrypted content wherein said encrypted content has the ability to be decrypted, and

wherein with a set of machine readable instructions in said computing device's system, said graphical image components are processed in an automated fashion within said computing device's system, and

wherein with visual perception by a human user in said computing device's system, said graphical image components are interacted upon and processed in a manual fashion by said user;

creating one or more character text sectional components adapted for the storage of normative standard character text based formatted data and storing user specified normative standard character text information data of said information in said created character text sectional components,

wherein said character text components may include encrypted content wherein said encrypted content has the ability to be decrypted, and

wherein with a set of machine readable instructions in said computing device's system, said character text

components are processed in an automated fashion within
 said computing device's system, and

wherein with manual perception by a human user in said
 computing device's system said character text components
 are interacted upon and processed in a manual fashion by
 said user;

wherein said character text formatted data comprises any of the
 following:

- scripting text,
- rich text,
- markup language text,
- compressed data text,
- {IEE*} Uniform Resource Locator (URL) character text,
- {IEE*} encoded data text,
- {IEE*} embedded data text of any type including that of the
 inscribed herein securable independent electronic document
 type,
- any other character text;

wherein said sectional components include intrinsic security feature
 data;

wherein with the creation of and population of said information in said
 container, said container includes at least one overall intrinsic
 data integrity hash check value;

wherein with said computing device system's automated interfacing of
 said graphical image container as binary file formatted type data in
 a direct non-altered single byte precision original "incrementally-
 tiled" data handling and storage method, having said character text
 sectional components encapsulated in said binary file container,
 allows said encapsulated character text formatted data to sustain
 its original sequential filed data form, and

wherein said container's sectional component's creation and processing
 is independent of said container's creation and processing, and

wherein said sectional component's associated creation and processing
 integrity is intervention independent of said container's
 association, and

wherein said sectional component's intrinsic security feature data
 integrity is enhanced with the inclusion or coupling of other said
 sectional component's intrinsic security feature data, and

wherein said normative standard graphic image container and said normative standard adapted character text sectional components further allows the electronic document:

integrity enhanced intervention and association control of processing and storage from non-desired additional parties,

independent interaction of processing and storage from non-desired additional parties,

independent validation of processing and storage from non-desired additional parties, and

independent processing of and storage in said computing device's readable instruction computing platform.

2. The method for the creation of an electronic document for securing information exchange of claim 1, wherein the said normative standard character text adapted sectional components include digital signature information data of a type of any of the following:

- (i) signature;
- (ii) co-signature;
- (iii) counter-signature.

3. The method for the creation of an electronic document for securing information exchange of claim 2, wherein the method further comprises a step of creating one or more additional sectional components adapted for the storage of said normative standard graphical image container based binary encoded digital signature formatted data and storing in said additional sectional components said container based binary encoded digital signature formatted data, wherein said binary encoded digital signature information data is of a type of any of the following:

- (i) signature;
- (ii) co-signature;
- (iii) counter-signature.

4. The method for the creation of an electronic document for securing information exchange of claim 3, wherein said sectional components include at least one cyclic redundancy check (CRC) value.

Doc Code: A.NE.AFCP

Document Description: After Final Consideration Pilot Program Request

PTO/SB/434 (05-13)

CERTIFICATION AND REQUEST FOR CONSIDERATION UNDER THE AFTER FINAL CONSIDERATION PILOT PROGRAM 2.0		
Practitioner Docket No.: 63451	Application No.: 12/316,699	Filing Date: Dec 15, 2008
First Named Inventor: John Lewis Guymon Jr	Title: Securable Independent Electronic Document	
<p>APPLICANT HEREBY CERTIFIES THE FOLLOWING AND REQUESTS CONSIDERATION UNDER THE AFTER FINAL CONSIDERATION PILOT PROGRAM 2.0 (AFCP 2.0) OF THE ACCOMPANYING RESPONSE UNDER 37 CFR 1.116.</p> <ol style="list-style-type: none"> 1. The above-identified application is (i) an original utility, plant, or design nonprovisional application filed under 35 U.S.C. 111(a) (a continuing application (e.g., a continuation or divisional application) is filed under 35 U.S.C. 111(a) and is eligible under (i)), or (ii) an international application that has entered the national stage in compliance with 35 U.S.C. 371(c). 2. The above-identified application contains an outstanding final rejection. 3. Submitted herewith is a response under 37 CFR 1.116 to the outstanding final rejection. The response includes an amendment to at least one independent claim, and the amendment does not broaden the scope of the independent claim in any aspect. 4. This certification and request for consideration under AFCP 2.0 is the only AFCP 2.0 certification and request filed in response to the outstanding final rejection. 5. Applicant is willing and available to participate in any interview requested by the examiner concerning the present response. 6. This certification and request is being filed electronically using the Office's electronic filing system (EFS-Web). 7. Any fees that would be necessary consistent with current practice concerning responses after final rejection under 37 CFR 1.116, e.g., extension of time fees, are being concurrently filed herewith. [There is no additional fee required to request consideration under AFCP 2.0.] 8. By filing this certification and request, applicant acknowledges the following: <ul style="list-style-type: none"> • Reissue applications and reexamination proceedings are not eligible to participate in AFCP 2.0. • The examiner will verify that the AFCP 2.0 submission is compliant, i.e., that the requirements of the program have been met (see items 1 to 7 above). For compliant submissions: <ul style="list-style-type: none"> ○ The examiner will review the response under 37 CFR 1.116 to determine if additional search and/or consideration (i) is necessitated by the amendment and (ii) could be completed within the time allotted under AFCP 2.0. If additional search and/or consideration is required but cannot be completed within the allotted time, the examiner will process the submission consistent with current practice concerning responses after final rejection under 37 CFR 1.116, e.g., by mailing an advisory action. ○ If the examiner determines that the amendment does not necessitate additional search and/or consideration, or if the examiner determines that additional search and/or consideration is required and could be completed within the allotted time, then the examiner will consider whether the amendment places the application in condition for allowance (after completing the additional search and/or consideration, if required). If the examiner determines that the amendment does not place the application in condition for allowance, then the examiner will contact the applicant and request an interview. <ul style="list-style-type: none"> ▪ The interview will be conducted by the examiner, and if the examiner does not have negotiation authority, a primary examiner and/or supervisory patent examiner will also participate. ▪ If the applicant declines the interview, or if the interview cannot be scheduled within ten (10) calendar days from the date that the examiner first contacts the applicant, then the examiner will proceed consistent with current practice concerning responses after final rejection under 37 CFR 1.116.

In the United States Patent and Trademark Office

Application Number: 12/316,699
Application Filed: December 15, 2008
Applicants: John Lewis Guymon Jr / Douglas Scott Litsey
Application Title: Securable Independent Electronic Document
Examiner/GAU: Kaveh Abrishamkar

Amendment in re Final Office Action dated April 26, 2019

July 26th, 2019

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir/ Madam:

In response to the Final Office Action dated April 26th, 2019, Applicants respectfully submit this AFCP amendment to the Application of Patent, #12/316,699, filed December 15th, 2008. This response is filed within the three month period for reply of the mailing date of the final Office Action, wherefore Applicants believe that no extension of time is required with the filing of this response.

This response is filed with a Certification and Request for Consideration under the After Final Consideration Pilot Program 2.0.

The following amendments and remarks are respectfully submitted. Reconsideration of the claims is respectfully requested.

SPECIFICATION:

Specification not changed.

AMj0726f.doc

Securable Independent Electronic Document
Guymon, et al

Serial No.: 12/316,699 AFCP Amendment
Page 2 of 16

CLAIMS:

Amended, printed and incorporated (Pages 9 through 13). Additionally supplied is the current claim set text for confirmed reference to the latest amended changes (Pages 14 through 16).

DRAWINGS:

Drawings not changed.

REMARKS:

1. Applicant has submitted amended claims that include an amendment to the independent claim #1 (and it's subsequent dependant claims #2, #3 and #4), with said amendment to the claims made in regard to the interview discussion Applicant had with Examiner on June 20th, 2019. Amendments to the claims are presented without broadening the claims in any way.

2. In regard to Examiner's '**Response to Arguments**', specifically '*Claim Rejections - 35 U.S.C. §101*', Applicant reaffirms that the claimed invention, in the least, is directed to eligible 35 U.S.C. §101 references, specifically that of:

- a) 'a new and useful Process', and
- b) 'any new and useful improvement thereof'

and has amended the current claim set as discussed and suggested by Examiner Abrishamkar in the interview dated June 20th, 2019 to have the claims more appropriately address the above eligible 35 U.S.C. §101 references. Applicant appreciates the time that Examiner Abrishamkar has taken to assist Applicant with the amendments to the claims for better conformity to these 35 U.S.C. §101 references. (Note: In previous replies Applicant has suggested and continues to maintain that the other 35 U.S.C. §101's category's apply to the invention described in the application, specifically that of an article of manufacture and composition of matter, and reserves the rights accordingly for such classification in the future, having the above 35 U.S.C. §101 directed eligible references the only ones referenced herein at this time for eligibility. Applicant believes that when the invention

AMj0726f.doc

Securable Independent Electronic Document
Guymon, et al

Serial No.: 12/316,699 AFCP Amendment
Page 3 of 16

described and written in the specification and claims is generated that it is an article, be it in electronic form, that was manufactured, having the manufacturing process be that of software development methods. Further, the electronic document that was generated from the manufactured process exists and requires storage, Applicant believes, as an ordered composition of matter having the same layout pattern as the first manufactured generation.)

3. Amendments to rejected claims #1 through #4 have been made and are included (see pages 9 through 12). The latest changes reorients the claim text very close to that of the originally included claim set, having the most significant alterations to the text supporting a method based claim type. Details of the changes included in the amended claims submitted with this 'After Final Office Action' AFCP amendment include the following:

a.) Articulation of currently rejected claims #1 through #4 to read as a method based claim set. Added actions 'verbs' to describe the different steps in the method. The claims are directed to a method type claim set as suggested by Examiner Abrishamkar during Applicant's June 20th, 2019 telephonic interview with Examiner.

b.) Confirmed a '**normative standard**' character text data description listing in the character text sub paragraph method section where the storing step of said text is mentioned to confirm the meaningful limits on the claim scope. In Claim #1 in the sub paragraph where the character text sectional components creation and storage method steps are listed, Applicant confirmed the wording 'normative standard' to describe the character text formatted information data that is being stored, as the main concept of the invention described in the specification and claims is the normative standard based graphical image and character text format combination, formatted accordingly in said normative standard based formats in the normative standard electronic document container. Although it was referenced in past claim

AMj0726f.doc

amendments, the method step needed the specific reference to the normative standard designation.

c.) Removed the '*and, if user specified, additional sectional components*' sub paragraph section. This conditional claim portion was not part of the originally submitted claims and is unnecessary as the said sub paragraph's functionality was to introduce the additional sectional components used in Dependant's dependant claim #3's container based digital signature data, having the introduction of the additional components now part of the dependant's claim method steps. Further, claim wording in said 'if user specified' section included text that should have been directed to the character text based sectional components, and therefore was removed from this 'if user specified' section and amended to the said character text based sectional component method steps sub paragraph wording section. The relocation of the character text's formatted data composition paragraph text restores proper character text format description type sub paragraph wording location. The sectional component intrinsic security feature data 'coupling', the #4Ig integrity attribute, originally included in the initial claims set describes the sectional coupling and intrinsic data generation as needed, having no requirement for the repetitive intrinsic data coupling attribute notification. Additional component sections can be included and worked with as the user specifies, having the mention of such not claim narrowing and removable without additional prior art searches done.

d.) Reference to '*at least one overall data integrity check value*' originally listed in the initially submitted claim set has been made within the amended claims, reinserted to make reference to said data integrity check value, one that is intrinsic as a result of a step in method claim, having the text removed in prior amended claim submissions when the claim's were directed to '*An electronic document*' or '*An information handling apparatus*' tangible object, having said tangible object's final

AMj0726f.doc

Securable Independent Electronic Document
Guymon, et al

Serial No.: 12/316,699 AFCP Amendment
Page 5 of 16

composition's 'hash value' a value available after said object's generation and not an actual part of said generated object, derived from the generated object's content, composition or otherwise 'summation'.

4. In support of the process for the Securable Independent Electronic Document invention described in the specification are details that reinforce Applicant's belief that the invention references a) 'a new and useful Process', and b) 'any new and useful improvement thereof' of 35 U.S.C. §101. Multiples of two types of currently 'world wide' ISO standard formats involved in computer processing, graphic image file formats and at least one or more character text file formats are mentioned and suggested to be in combination, using **'a new and useful Process'** to create **'a new and useful improvement thereof'**, allowing improvements to the functioning of a computer, or to any other technology or technical field with the described electronic document, allowing effective transformation of simple image files to a more secure interactive and purposeful electronic document container for information asset management. Enhanced operations and functionalities that are not available in the separate basic computing conceptual frameworks become available with the said combination. Further, in the specification many references are made to the usage of a computing device, having the majority of computing devices available today supporting the electronic document's generation, use and storage.

5. The electronic document and its method of generation described in the specification and claims exceed a simple data structure definition and is a combination of conventional elements in a conventional manner that includes functionality processes incorporating tangible digital type items. Further, the electronic document generation process includes incorporated structural limitations with and in conjunction to multiple unique and original user defined and specified data objects and/or elements in various systematic steps to methodically incorporate, use, maintain or otherwise manipulate said data object elements.

AMj0726f.doc

Securable Independent Electronic Document
Guymon, et al

Serial No.: 12/316,699 AFCP Amendment
Page 6 of 16

6. Previously on April 7th, 2014, Applicant submitted three (3) an additional claims that were method and system based claims. Applicant submitted these additional new claims with a request for Continued Examination (RCE). Applicant later, with his next amendment filed, removed these claims believing, in error, that the addition of said new claims was incorrect for the current prosecution phase, causing further rejections and/or problems with the application file, having Applicant planning to add such claims during the continued examination (RCE) period.

7. Applicant understands and accepts that the 'removal' of these newly added 'RCE' was done in error by Applicant; nevertheless, Applicant only wishes to inform the Office and the Examiner that these claims directed to a method and system were constructed by Applicant because the claim types are applicable to subject matter of the inscribed invention.

8. In previous claim amendments Applicant has done his best to make amendments based on Examiner objections and was not fully aware of the requirements of claim construction for 35 U.S.C. §101, having applicant believe that the wording, described processing steps and overall claim interpretations in combination with the included specification described in sufficient detail and appropriateness the invention, allowing

'a person having ordinary skill in the art, a person of (ordinary) skill in the art, a person skilled in the art, a skilled addressee or simply a skilled person who is presumed to be aware of all the pertinent prior art to be able to obtain an understanding of the invention',

having said person be that of the Examiner as well; Applicant can appreciate instances where a understanding may not be fully obtained by another and submits this reply and amendment to further such understanding. Applicants appreciate the patience of all those involved in working with Applicant's during the prosecution of the inscribed application.

AMj0726f.doc

Securable Independent Electronic Document
Guymon, et al

Serial No.: 12/316,699 AFCP Amendment
Page 7 of 16

9. Furthered understanding and determination of what the Applicant has invented by reviewing the entire application disclosure and construing the claims in accordance with their broadest reasonable interpretation (BRI) is desired by Applicant for the Examiner, and when considered in it's totality, the application for patent is for more than just a data structure as indicated by the Examiner, and that the generation of said method and system claims support the 'Subject Matter Eligibility Criteria' as outlined and described for 35 U.S.C. §101.

10. Therefore, the 'method based' claim set for the creation of an electronic document supporting specific platform and nonessential party independence for securing information exchange', described in the specification and presented amended claims supports and adheres to, as Applicants truly and honestly believe, meets the confines and requirements of 35 U.S.C. §101 for patent eligibility.

CONCLUSION:

11. For all the above reasons, Applicant submits that the amended claims are now in proper form to overcome 35 U.S.C. §101 rejections and define patentability over the prior art.

12. Applicants, insomuch as there being no further outstanding objections or rejections, therefore submits that this application is now in condition for allowance which Applicants respectfully solicit.

Respectfully submitted,

/JohnLewisGuymonJr/
John Lewis Guymon Jr.

~~inscribed herein securable independent electronic
document type;~~

~~graphic image data;~~

~~raw binary data;~~

~~intrinsic security feature data; data;~~

~~container based binary encoded digital signature data;~~

~~any other user specified data;~~

~~wherein with the creation of and population of said information in said
container, said container includes at least one overall intrinsic
data integrity hash check value;~~

~~wherein with said computing device system's automated interfacing of
said graphical image container as binary file formatted type data in
a direct non-altered single byte precision original 'incrementally-
filed' data handling and storage method, having said character text
sectional components encapsulated in said binary file container,
allows said encapsulated character text formatted data to sustain
its original sequential filed data form, and~~

~~wherein said container's sectional component's creation and processing
is independent of said container's creation and processing, and~~

~~wherein said additional sectional components include intrinsic security feature data
wherein coupling of said additional sectional component's security feature data
generates additional intrinsic security feature data associated creation and
processing integrity is intervention independent of said container's
association, and~~

~~wherein said intrinsic data or said additional intrinsic data is stored
in any one of said sectional components or said additional
sectional components,~~

~~wherein automated system interfacing as binary file formatted type data in a direct, non-
altered, single byte precision original 'incrementally filed' data handling and storage
method, whereby having said character text sectional component encapsulated in said
binary document container allows said character text to sustain its original sequential
filed data form, and~~

~~wherein independent creation and processing of said container from said sectional
component's creation and processing, and~~

~~wherein integrity enhanced non-associated creation and processing intervention from said
sectional component's creation and processing, and~~

~~wherein integrity enhanced incorporated~~ sectional component's intrinsic security feature ~~information coupling of said sectional component's security check information with~~ data integrity is enhanced with the inclusion or coupling of other said sectional component's intrinsic security check information, feature data, and

wherein said normative standard graphic image container and said normative standard adapted character text sectional components further allows the electronic document

integrity enhanced intervention and association control of processing and storage from non-desired additional parties,

independent interaction of processing and storage from non-desired additional parties,

independent validation of processing and storage from non-desired additional parties, and

independent processing of and storage in said ~~machine~~ computing device's readable instruction's computing platform.

2. (ORIGINAL AMENDED) The method for the creation of an electronic document for securing information exchange of claim 1, wherein the said normative standard character text based adapted sectional components include digital signature sectional component(s) include signatures of one or more of the following types: information data of a type of any of the following:

- (i) signature;
- (ii) co-signature;
- (iii) counter-signature.

3. (ORIGINAL AMENDED) ~~The~~ The method for the creation of an electronic document for securing information exchange of claim 2, wherein said document container the method further comprises a step of creating one or more additional sectional components adapted for the storage of said normative user specified standard graphical image container based binary encoded digital signature formatted data and storing in said additional sectional components said container based binary encoded digital signature formatted data, wherein said binary encoded container based digital signature sectional component(s) include signatures of one or more of the following types: information data is of a type of any of the following:

- (i) signature;
- (ii) co-signature;
- (iii) counter-signature.

(THIS LISTING IS THE CORRECT AND COMPLETE TEXT OF THE CLAIMS AS OF 7/26/19)

CLAIMS: Latest as of 7/26/2019 (#1 = Independent, #2 thru #4 = Dependant)

1. A method for the creation of an electronic document supporting specific platform and nonessential party independence for securing information exchange, tangibly embodied in a computer readable storage medium, the method, using a computing device, for securing the exchange of information within the securable independent electronic document comprises the steps of:

creating a normative standard graphical image based container adapted for sectional components,

populating the sectional component container with said information using, in a user specified order, the steps of:

creating one or more graphical image sectional components adapted for the storage of normative standard graphical image based formatted data of said graphical image container type and storing user specified normative standard graphical image information data of said information in said created graphical image sectional components,

wherein said graphical image components may include encrypted content wherein said encrypted content has the ability to be decrypted, and

wherein with a set of machine readable instructions in said computing device's system, said graphical image components are processed in an automated fashion within said computing device's system, and

wherein with visual perception by a human user in said computing device's system, said graphical image components are interacted upon and processed in a manual fashion by said user;

creating one or more character text sectional components adapted for the storage of normative standard character text based formatted data and storing user specified normative standard character text information data of said information in said created character text sectional components,

wherein said character text components may include encrypted content wherein said encrypted content has the ability to be decrypted, and

wherein with a set of machine readable instructions in said computing device's system, said character text

components are processed in an automated fashion within
said computing device's system, and

wherein with visual perception by a human user in said
computing device's system said character text components
are interacted upon and processed in a manual fashion by
said user;

wherein said character text formatted data comprises any of the
following:

scripting text,
rich text,
markup language text,
compressed data text,
(1Re*) Uniform Resource Locator (URL) character text,
(1Ec*) encoded data text,
(1Em*) embedded data text of any type including that of the
inscribed herein securable independent electronic document
type,
any other character text;

wherein said sectional components include intrinsic security feature
data;

wherein with the creation of and population of said information in said
container, said container includes at least one overall intrinsic
data integrity hash check value;

wherein with said computing device system's automated interfacing of
said graphical image container as binary file formatted type data in
a direct non-altered single byte precision original 'incrementally-
filed' data handling and storage method, having said character text
sectional components encapsulated in said binary file container,
allows said encapsulated character text formatted data to sustain
its original sequential filed data form, and

wherein said container's sectional component's creation and processing
is independent of said container's creation and processing, and

wherein said sectional component's associated creation and processing
integrity is intervention independent of said container's
association, and

wherein said sectional component's intrinsic security feature data
integrity is enhanced with the inclusion or coupling of other said
sectional component's intrinsic security feature data, and

AMj0726f.doc

Guymon, et al

Serial No.: 12/316,699 AFCP Amendment

Page 16 of 16

wherein said normative standard graphic image container and said normative standard adapted character text sectional components further allows the electronic document

integrity enhanced intervention and association control of processing and storage from non-desired additional parties,

independent interaction of processing and storage from non-desired additional parties,

independent validation of processing and storage from non-desired additional parties, and

independent processing of and storage in said computing device's readable instruction computing platform.

2. The method for the creation of an electronic document for securing information exchange of claim 1, wherein the said normative standard character text adapted sectional components include digital signature information data of a type of any of the following:

- (i) signature;
- (ii) co-signature;
- (iii) counter-signature.

3. The method for the creation of an electronic document for securing information exchange of claim 2, wherein the method further comprises a step of creating one or more additional sectional components adapted for the storage of said normative standard graphical image container based binary encoded digital signature formatted data and storing in said additional sectional components said container based binary encoded digital signature formatted data, wherein said binary encoded digital signature information data is of a type of any of the following:

- (i) signature;
- (ii) co-signature;
- (iii) counter-signature.

4. The method for the creation of an electronic document for securing information exchange of claim 3, wherein said sectional components include at least one cyclic redundancy check (CRC) value.

Document Description: After-Final Consideration Pilot Program Request

PTP/36/44/13

CERTIFICATION AND REQUEST FOR CONSIDERATION UNDER THE
AFTER-FINAL CONSIDERATION PILOT PROGRAM 2.0

Practitioner/Inventor No.:	Application No.:	Filing Date:
First Planned Invention:	Title:	

APPLICANT HEREBY CERTIFIES THE FOLLOWING AND REQUESTS CONSIDERATION UNDER THE AFTER-FINAL CONSIDERATION PILOT PROGRAM 2.0 (AFCP 2.0) OF THE ACCOMPANYING RESPONSE UNDER 37 CFR 1.116.

- The above-identified application is (i) an original utility, plant, or design nonprovisional application filed under 35 U.S.C. 111(a) (a continuing application (e.g., a continuation or divisional application) is filed under 35 U.S.C. 111(b) and is eligible under (ii), or (ii) an international application that has entered the national stage in compliance with 35 U.S.C. 371(c).
- The above-identified application contains an outstanding final rejection.
- Submitted herewith is a response under 37 CFR 1.116 to the outstanding final rejection. The response includes an amendment to at least one independent claim, and the amendment does not broaden the scope of the independent claim in any aspect.
- This certification and request for consideration under AFCP 2.0 is the only AFCP 2.0 certification and request filed in response to the outstanding final rejection.
- Applicant is willing and available to participate in any interview requested by the examiner concerning the present response.
- This certification and request is being filed electronically using the Office's electronic filing system (E-Filing).
- Any fees that would be necessary to proceed with current practice concerning responses after final rejection under 37 CFR 1.116, e.g., extension-of-time fees, are being concurrently filed herewith. (If there is one additional fee required to request consideration under AFCP 2.0.)
- By filing this certification and request, applicant acknowledges the following:
 - Previous applications and reexamination proceedings are not eligible to participate in AFCP 2.0.
 - The examiner will verify that the AFCP 2.0 submission is compliant, i.e., that the requirements of the program have been met (see items 1 to 7 above). For compliant submissions:
 - The examiner will review the response under 37 CFR 1.116 to determine if additional search and/or consideration (i) is necessitated by the amendment and (ii) could be completed within the time allotted under AFCP 2.0. If additional search and/or consideration is required but cannot be completed within the allotted time, the examiner will process the submission consistent with current practice concerning responses after final rejection under 37 CFR 1.116, e.g., by filing an advisory action.
 - If the examiner determines that the amendment does not necessitate additional search and/or consideration, and if the examiner determines that additional search and/or consideration is required and could be completed within the allotted time, then the examiner will consider whether the amendment places the application in condition for allowance (after completing the additional search and/or consideration, if required). If the examiner determines that the amendment does not place the application in condition for allowance, then the examiner will contact the applicant and request an interview.
 - The interview will be conducted by the examiner, and if the examiner does not have negotiation authority, a primary examiner and/or supervisory patent examiner will also participate.
 - If the applicant declines the interview, or if the interview cannot be scheduled within ten (10) calendar days from the date that the examiner first contacts the applicant, then the examiner will proceed consistent with current practice concerning responses after final rejection under 37 CFR 1.116.

Document Description: After Final Consideration Pilot Program Request

7/26/2019 3:43:19

CERTIFICATION AND REQUEST FOR CONSIDERATION UNDER THE AFTER FINAL CONSIDERATION PILOT PROGRAM 2.0

Practitioner/Declarant Name:	Application No.:	Filing Date:
First Named Inventor:	Title:	

APPLICATION NUMBER COMPLETES THE FOLLOWING AND REQUESTS CONSIDERATION UNDER THE AFTER FINAL CONSIDERATION PILOT PROGRAM 2.0 (AFCP 2.0) OF THE ACCOMPANYING RESPONSE UNDER 37 CFR 1.106.

1. The above-identified application is (i) an original utility, plant, or design (except ornamental) application filed under 35 U.S.C. 1.11(a) (a continuing application (e.g., a continuation or divisional application) is filed under 35 U.S.C. 1.11(a) and is eligible under (i), or (ii) an international application that has entered the national stage in compliance with 35 U.S.C. 379(c).
2. The above-identified application contains an outstanding final rejection.
3. Submitted herewith is a response under 37 CFR 1.106 to the outstanding final rejection. The response includes an amendment to at least one independent claim, and the amendment does not broaden the scope of the independent claim in any aspect.
4. This certification and request for reconsideration under AFCP 2.0 is the only AFCP 2.0 certification and request filed in response to the outstanding final rejection.
5. Applicant is willing and available to participate in any interview requested by the examiner concerning the present response.
6. This certification and request is being filed electronically using the office's electronic filing system (EFS 2002).
7. Any fees that would be necessary consistent with current practice concerning responses after final rejection under 37 CFR 1.106, e.g., extension of time fees, are being concurrently filed herewith. (There is no additional fee required to request reconsideration under AFCP 2.0.)
8. By filing this certification and request, applicant acknowledges the following:
 - Because applications and reexamination proceedings are not eligible to participate in AFCP 2.0.
 - The examiner will verify that the AFCP 2.0 submission is compliant, i.e., that the requirements of the program have been met (see items 1-6 above). For compliant submissions:
 - o The examiner will review the response under 37 CFR 1.106 to determine if additional search and/or consideration (i) is necessitated by the amendment and (ii) could be completed within the time set forth under AFCP 2.0. If additional search and/or consideration is required but cannot be completed within the allotted time, the examiner will process the submission consistent with current practice concerning responses after final rejection under 37 CFR 1.106, e.g., by raising an advisory action.
 - o If the examiner determines that the amendment does not necessitate additional search and/or consideration, or if the examiner determines that additional search and/or consideration is required and could be completed within the allotted time, then the examiner will consider whether the amendment places the application in condition for allowance (after completing the additional search and/or consideration, if required). If the examiner determines that the amendment does not place the application in condition for allowance, then the examiner will contact the applicant and request an interview.
 - The interview will be conducted by the examiner, and if the examiner does not have negotiation authority, a primary examiner and/or supervisor (parent examiner) will also participate.
 - If the applicant declines the interview, or if the interview cannot be scheduled within ten (10) calendar days from the date that the examiner first contacts the applicant, then the examiner will proceed consistent with current practice concerning responses after final rejection under 37 CFR 1.106.

Signature	Date
Practitioner	
(Print Type)	Registration No.

Note: This form must be signed in accordance with 37 CFR 1.331. See 37 CFR 1.331 for signature requirements and certifications. Submit multiple pages if more than one signature is required, see below*.

 Application Title: Security Independent Electronic Document
 Examiner:CAJGJ Karvela, Adriana

Amendment filed re: Final Office Action dated April 26, 2019

July 26th, 2019

Commissioner for Patents
 P.O. Box 4850
 Alexandria, VA 22313-1450

Sir Madam:

In response to the Final Office Action dated April 26th, 2019, Applicants respectfully submit this AOPC amendment to the Application of Patent, #12/916,699, filed December 15th, 2008. This response is filed within the three month period for reply of the mailing date of the final Office Action, wherefore Applicants believe that no extension of time is required with the filing of this response.

This response is filed with a Certification and Request for Consideration under the AOPC Final Consideration Pilot Program 2.0.

The following amendments and remarks are respectfully submitted. Reconsideration of the claims is respectfully requested.

SPRINGS: 4/16/2019
 Specification not changed.

CAJGJ/doc

BEST AVAILABLE COPY

Securable Independent Electronic Document
 Creighton, et al.

Serial No.: 129316,699 AFOAP Amendment
 Page 2 of 16

CLAIMS:

Amended, printed and incorporated (Pages 9 through 13). Additionally supplied is the current claim set text for convenient reference to the latest amended changes (Pages 14 through 16).

DELETIONS:

Changes not changed.

DELETED CLAIMS:

1. Applicant has submitted amended claims that include an amendment to the independent claim #1 (and it's subsequent dependent claims #2, #3 and #4), with said amendment to the claims made in regard to the interview discussion Applicant had with Examiner on June 29th, 2019. Amendments to the claims are presented without broadening the claims in any way.

2. In regard to Examiner's "Response to Arguments", specifically "Classifications - 35 U.S.C. §101", Applicant reaffirms that the claimed invention, in the least, is directed to eligible 35 U.S.C. §101 references, specifically that of:

- a) "a new and useful Process", and
- b) "any new and useful improvement thereof"

and has amended the current claim set as discussed and suggested by Examiner Adrishankar in the interview dated June 29th, 2019 to have the claims more appropriately address the above eligible 35 U.S.C. §101 references. Applicant appreciates the time that Examiner Adrishankar has taken to assist Applicant with the amendments to the claims for better conformity to these 35 U.S.C. §101 references. (Note: In previous replies Applicant has suggested and continues to maintain that the other 35 U.S.C. §101's category's apply to the invention described in the application, specifically that of an article of manufacture and composition of matter, and reserves the rights accordingly for such classification in the future, having the above 35 U.S.C. §101 directed eligible references the only ones referenced herein at this time for eligibility. Applicant believes that when the invention

BEST AVAILABLE COPY

Securable Independent Electronic Document
 Grayson, et al

Serial No.: 133316,699 AFCP Amendment
 Page 3 of 16

described and written in the specification and claims is generated that it is an article, be it in electronic form, that was manufactured, having the manufacturing process be that of software development methods. Further, the electronic document that was generated from the manufactured process exists and requires storage, Applicant believes, as an ordered composition of matter having the same layout pattern as the first manufactured generation.)

3. Amendments to rejected claims #1 through #4 have been made and are included (see pages 9 through 12). The latest changes recite the claim text very close to that of the originally included claim set, having the most significant alterations to the text supporting a method based claim type. Details of the changes included in the amended claims submitted with this After Final Office Action AFCP amendment include the following:

a.) Articulation of currently rejected claims #1 through #4 to read as a method based claim set. Added various "verbs" to describe the different steps in the method. The claims are directed to a method type claim set as suggested by Examiner Abernethy during Applicant's June 23rd, 2019 telephone interview with Examiner.

b.) Confirmed a "normative standard" character test data description listing in the character test sub paragraph method section where the storing step of said test is mentioned to confirm the meaningful limits on the claim scope. In Claim #1 in the sub paragraph where the character test additional components creation and storage method steps are listed, Applicant confirmed the wording "normative standard" to describe the character test formatted information data that is being stored, as the main concept of the invention described in the specification and claims is the normative standard based graphical image and character test format combination, formatted accordingly in said normative standard based format in the normative standard electronic document container. Although it was referenced in past claim

:\obj\93695.doc

BEST AVAILABLE COPY

Securable Independent Electronic Document
 Corporation, et al.

Serial No.: 133316,599 AIPCJF Amendment
 Page 4 of 16

amendments, the method step needed the specific reference to the normative standard designation.

c.) Removed the word, "if user specified, additional sectional components" sub paragraph section. This conditional claim portion was not part of the originally submitted claims and is unnecessary as the said sub paragraph's functionality was to introduce the additional sectional components used in Independent's dependent claim #3's container based digital signature data, having the introduction of the additional components now part of the dependent's claim method steps. Further, claim wording in said "if user specified" section included text that should have been directed to the character text based sectional components, and therefore was removed from this "if user specified" section and amended to the said character text based sectional component method steps sub paragraph wording section. The relocation of the character text's formatted data composition paragraph text restores proper character text format description type sub paragraph wording location. The sectional component intrinsic security feature data "coupling", the 4-11g integrity attribute, originally included in the initial claims set describes the sectional coupling and intrinsic data generation as needed, having no requirement for the repetitive intrinsic data coupling attribute notification. Additional component sections can be included and worded with as the user specifies, having the intention of such not claim numbering and reciteables without additional prior art searches done.

d.) Reference to "at least one overall data integrity check value" originally listed in the initially submitted claim set has been made within the amended claims, reworded to make reference to said data integrity check value, one that is intrinsic as a result of a step in method claim, having the text removed in prior amended claim submissions when the claim's were directed to "an electronic document" or "an information processing apparatus" tangible object, having said tangible object's final

Page 5 of 16

composition's "hash value" a value available after said object's generation and not an actual part of said generated object, derived from the generated object's content, composition or otherwise "summation".

4. In support of the process for the Securable Independent Electronic Document invention described in the specification are details that reinforce Applicant's belief that the invention references: a) 'a new and useful Process', and b) 'any new and useful improvement thereof' of 35 U.S.C. §101. Multiples of two types of currently "world wide" ISO standard formats involved in computer processing, graphic image file formats and at least one or more character text file formats are mentioned and suggested to be in combination, using 'a new and useful Process' to create 'a new and useful improvement thereof', allowing improvements to the functioning of a computer, or to any other technology or technical field with the described electronic document, allowing effective transmission of simple image files to a more secure interactive and processed electronic

Re: Susceptible Independent Electronic Document, Ser # US 2019 066993, filed December 15, 2008

Dear Sir or Madam,

Applicant presents this cover letter and contents accompanying Applicant's "AFCEP 2.0 Final Office Action Amendment" filed in response to the Final Office Action dated April 26, 2019. Applicant believes contents enclosed will place the application in proper context.

Contents of this amendment request include the following:

Title	Page Count
Certification And Request For Consideration (PTC/2513434) -- John Guyman	1
Certification And Request For Consideration (PTC/2513434) -- Douglas Linsay	1
Amendment in re Final Office Action dated April 26, 2019	16

Thank you for your consideration and time with this correspondence.

Respectfully submitted,

John.Lewis.Guyman@intellicoll.com

Document Description: After Final Consideration Pilot Program Request

PTO/SB/434 (05-13)

CERTIFICATION AND REQUEST FOR CONSIDERATION UNDER THE AFTER FINAL CONSIDERATION PILOT PROGRAM 2.0		
Practitioner Docket No.:	Application No.:	Filing Date:
63451	12/316,699	Dec 15, 2008
First Named Inventor:	Title:	
John Lewis Guymon Jr	Securable Independent Electronic Document	
<p>APPLICANT HEREBY CERTIFIES THE FOLLOWING AND REQUESTS CONSIDERATION UNDER THE AFTER FINAL CONSIDERATION PILOT PROGRAM 2.0 (AFCP 2.0) OF THE ACCOMPANYING RESPONSE UNDER 37 CFR 1.116.</p> <ol style="list-style-type: none"> The above-identified application is (i) an original utility, plant, or design nonprovisional application filed under 35 U.S.C. 111(a) [a continuing application (e.g., a continuation or divisional application) is filed under 35 U.S.C. 111(a) and is eligible under (i)], or (ii) an international application that has entered the national stage in compliance with 35 U.S.C. 371(c). The above-identified application contains an outstanding final rejection. Submitted herewith is a response under 37 CFR 1.116 to the outstanding final rejection. The response includes an amendment to at least one independent claim, and the amendment does not broaden the scope of the independent claim in any aspect. This certification and request for consideration under AFCP 2.0 is the only AFCP 2.0 certification and request filed in response to the outstanding final rejection. Applicant is willing and available to participate in any interview requested by the examiner concerning the present response. This certification and request is being filed electronically using the Office's electronic filing system (EFS-Web). Any fees that would be necessary consistent with current practice concerning responses after final rejection under 37 CFR 1.116, e.g., extension of time fees, are being concurrently filed herewith. [There is no additional fee required to request consideration under AFCP 2.0.] By filing this certification and request, applicant acknowledges the following: <ul style="list-style-type: none"> Reissue applications and reexamination proceedings are not eligible to participate in AFCP 2.0. The examiner will verify that the AFCP 2.0 submission is compliant, i.e., that the requirements of the program have been met (see items 1 to 7 above). For compliant submissions: <ul style="list-style-type: none"> The examiner will review the response under 37 CFR 1.116 to determine if additional search and/or consideration (i) is necessitated by the amendment and (ii) could be completed within the time allotted under AFCP 2.0. If additional search and/or consideration is required but cannot be completed within the allotted time, the examiner will process the submission consistent with current practice concerning responses after final rejection under 37 CFR 1.116, e.g., by mailing an advisory action. If the examiner determines that the amendment does not necessitate additional search and/or consideration, or if the examiner determines that additional search and/or consideration is required and could be completed within the allotted time, then the examiner will consider whether the amendment places the application in condition for allowance (after completing the additional search and/or consideration, if required). If the examiner determines that the amendment does not place the application in condition for allowance, then the examiner will contact the applicant and request an interview. <ul style="list-style-type: none"> The interview will be conducted by the examiner, and if the examiner does not have negotiation authority, a primary examiner and/or supervisory patent examiner will also participate. If the applicant declines the interview, or if the interview cannot be scheduled within ten (10) calendar days from the date that the examiner first contacts the applicant, then the examiner will proceed consistent with current practice concerning responses after final rejection under 37 CFR 1.116.

Application Number: 12/316,699
Application Filed: December 15, 2008
Applicants: John Lewis Guymon Jr / Douglas Scott Litsey
Application Title: Securable Independent Electronic Document
Examiner/GAU: Kaveh Abrishamkar

Amendment in re Final Office Action dated April 26, 2019

July 26th, 2019

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir/ Madam:

In response to the Final Office Action dated April 26th, 2019, Applicants respectfully submit this AFCP amendment to the Application of Patent, #12/316,699, filed December 15th, 2008. This response is filed within the three month period for reply of the mailing date of the final Office Action, wherefore Applicants believe that no extension of time is required with the filing of this response.

This response is filed with a Certification and Request for Consideration under the After Final Consideration Pilot Program 2.0.

The following amendments and remarks are respectfully submitted. Reconsideration of the claims is respectfully requested.

SPECIFICATION:

Specification not changed.

AMj0726f.doc

Securable Independent Electronic Document
Guymon, et al

Serial No.: 12/316,699 AFCP Amendment
Page 2 of 16

CLAIMS:

Amended, printed and incorporated (Pages 9 through 13). Additionally supplied is the current claim set text for confirmed reference to the latest amended changes (Pages 14 through 16).

DRAWINGS:

Drawings not changed.

REMARKS:

1. Applicant has submitted amended claims that include an amendment to the independent claim #1 (and it's subsequent dependant claims #2, #3 and #4), with said amendment to the claims made in regard to the interview discussion Applicant had with Examiner on June 20th, 2019. Amendments to the claims are presented without broadening the claims in any way.

2. In regard to Examiner's '**Response to Arguments**', specifically '*Claim Rejections - 35 U.S.C. §101*', Applicant reaffirms that the claimed invention, in the least, is directed to eligible 35 U.S.C. §101 references, specifically that of:

- a) 'a new and useful Process', and
- b) 'any new and useful improvement thereof'

and has amended the current claim set as discussed and suggested by Examiner Abrishamkar in the interview dated June 20th, 2019 to have the claims more appropriately address the above eligible 35 U.S.C. §101 references. Applicant appreciates the time that Examiner Abrishamkar has taken to assist Applicant with the amendments to the claims for better conformity to these 35 U.S.C. §101 references. (Note: In previous replies Applicant has suggested and continues to maintain that the other 35 U.S.C. §101's category's apply to the invention described in the application, specifically that of an article of manufacture and composition of matter, and reserves the rights accordingly for such classification in the future, having the above 35 U.S.C. §101 directed eligible references the only ones referenced herein at this time for eligibility. Applicant believes that when the invention

AMj0726f.doc

Securable Independent Electronic Document
Guymon, et al

Serial No.: 12/316,699 AFCP Amendment
Page 3 of 16

described and written in the specification and claims is generated that it is an article, be it in electronic form, that was manufactured, having the manufacturing process be that of software development methods. Further, the electronic document that was generated from the manufactured process exists and requires storage, Applicant believes, as an ordered composition of matter having the same layout pattern as the first manufactured generation.)

3. Amendments to rejected claims #1 through #4 have been made and are included (see pages 9 through 12). The latest changes reorients the claim text very close to that of the originally included claim set, having the most significant alterations to the text supporting a method based claim type. Details of the changes included in the amended claims submitted with this 'After Final Office Action' AFCP amendment include the following:

a.) Articulation of currently rejected claims #1 through #4 to read as a method based claim set. Added actions 'verbs' to describe the different steps in the method. The claims are directed to a method type claim set as suggested by Examiner Abrishamkar during Applicant's June 20th, 2019 telephonic interview with Examiner.

b.) Confirmed a '**normative standard**' character text data description listing in the character text sub paragraph method section where the storing step of said text is mentioned to confirm the meaningful limits on the claim scope. In Claim #1 in the sub paragraph where the character text sectional components creation and storage method steps are listed, Applicant confirmed the wording 'normative standard' to describe the character text formatted information data that is being stored, as the main concept of the invention described in the specification and claims is the normative standard based graphical image and character text format combination, formatted accordingly in said normative standard based formats in the normative standard electronic document container. Although it was referenced in past claim

AMj0726f.doc

amendments, the method step needed the specific reference to the normative standard designation.

c.) Removed the '*and, if user specified, additional sectional components*' sub paragraph section. This conditional claim portion was not part of the originally submitted claims and is unnecessary as the said sub paragraph's functionality was to introduce the additional sectional components used in Dependant's dependant claim #3's container based digital signature data, having the introduction of the additional components now part of the dependant's claim method steps. Further, claim wording in said 'if user specified' section included text that should have been directed to the character text based sectional components, and therefore was removed from this 'if user specified' section and amended to the said character text based sectional component method steps sub paragraph wording section. The relocation of the character text's formatted data composition paragraph text restores proper character text format description type sub paragraph wording location. The sectional component intrinsic security feature data 'coupling', the #4Ig integrity attribute, originally included in the initial claims set describes the sectional coupling and intrinsic data generation as needed, having no requirement for the repetitive intrinsic data coupling attribute notification. Additional component sections can be included and worked with as the user specifies, having the mention of such not claim narrowing and removable without additional prior art searches done.

d.) Reference to '*at least one overall data integrity check value*' originally listed in the initially submitted claim set has been made within the amended claims, reinserted to make reference to said data integrity check value, one that is intrinsic as a result of a step in method claim, having the text removed in prior amended claim submissions when the claim's were directed to '*An electronic document*' or '*An information handling apparatus*' tangible object, having said tangible object's final

AMj0726f.doc

Securable Independent Electronic Document
Guymon, et al

Serial No.: 12/316,699 AFCP Amendment
Page 5 of 16

composition's 'hash value' a value available after said object's generation and not an actual part of said generated object, derived from the generated object's content, composition or otherwise 'summation'.

4. In support of the process for the Securable Independent Electronic Document invention described in the specification are details that reinforce Applicant's belief that the invention references a) 'a new and useful Process', and b) 'any new and useful improvement thereof' of 35 U.S.C. §101. Multiples of two types of currently 'world wide' ISO standard formats involved in computer processing, graphic image file formats and at least one or more character text file formats are mentioned and suggested to be in combination, using **'a new and useful Process'** to create **'a new and useful improvement thereof'**, allowing improvements to the functioning of a computer, or to any other technology or technical field with the described electronic document, allowing effective transformation of simple image files to a more secure interactive and purposeful electronic document container for information asset management. Enhanced operations and functionalities that are not available in the separate basic computing conceptual frameworks become available with the said combination. Further, in the specification many references are made to the usage of a computing device, having the majority of computing devices available today supporting the electronic document's generation, use and storage.

5. The electronic document and its method of generation described in the specification and claims exceed a simple data structure definition and is a combination of conventional elements in a conventional manner that includes functionality processes incorporating tangible digital type items. Further, the electronic document generation process includes incorporated structural limitations with and in conjunction to multiple unique and original user defined and specified data objects and/or elements in various systematic steps to methodically incorporate, use, maintain or otherwise manipulate said data object elements.

AMj0726f.doc

Securable Independent Electronic Document
Guymon, et al

Serial No.: 12/316,699 AFCP Amendment
Page 6 of 16

6. Previously on April 7th, 2014, Applicant submitted three (3) an additional claims that were method and system based claims. Applicant submitted these additional new claims with a request for Continued Examination (RCE). Applicant later, with his next amendment filed, removed these claims believing, in error, that the addition of said new claims was incorrect for the current prosecution phase, causing further rejections and/or problems with the application file, having Applicant planning to add such claims during the continued examination (RCE) period.

7. Applicant understands and accepts that the 'removal' of these newly added 'RCE' was done in error by Applicant; nevertheless, Applicant only wishes to inform the Office and the Examiner that these claims directed to a method and system were constructed by Applicant because the claim types are applicable to subject matter of the inscribed invention.

8. In previous claim amendments Applicant has done his best to make amendments based on Examiner objections and was not fully aware of the requirements of claim construction for 35 U.S.C. §101, having applicant believe that the wording, described processing steps and overall claim interpretations in combination with the included specification described in sufficient detail and appropriateness the invention, allowing

'a person having ordinary skill in the art, a person of (ordinary) skill in the art, a person skilled in the art, a skilled addressee or simply a skilled person who is presumed to be aware of all the pertinent prior art to be able to obtain an understanding of the invention',

having said person be that of the Examiner as well; Applicant can appreciate instances where a understanding may not be fully obtained by another and submits this reply and amendment to further such understanding. Applicants appreciate the patience of all those involved in working with Applicant's during the prosecution of the inscribed application.

AMj0726f.doc

Securable Independent Electronic Document
Guymon, et al

Serial No.: 12/316,699 AFCP Amendment
Page 7 of 16

9. Furthered understanding and determination of what the Applicant has invented by reviewing the entire application disclosure and construing the claims in accordance with their broadest reasonable interpretation (BRI) is desired by Applicant for the Examiner, and when considered in its totality, the application for patent is for more than just a data structure as indicated by the Examiner, and that the generation of said method and system claims support the 'Subject Matter Eligibility Criteria' as outlined and described for 35 U.S.C. §101.

10. Therefore, the 'method based' claim set for the creation of an electronic document supporting specific platform and nonessential party independence for securing information exchange', described in the specification and presented amended claims supports and adheres to, as Applicants truly and honestly believe, meets the confines and requirements of 35 U.S.C. §101 for patent eligibility.

CONCLUSION:

11. For all the above reasons, Applicant submits that the amended claims are now in proper form to overcome 35 U.S.C. §101 rejections and define patentability over the prior art.

12. Applicants, insomuch as there being no further outstanding objections or rejections, therefore submits that this application is now in condition for allowance which Applicants respectfully solicit.

Respectfully submitted,

/JohnLewisGuymonJr/

~~inscribed herein securable independent electronic
 document type;~~

~~graphic image data;~~

~~raw binary data;~~

~~intrinsic security feature data;~~

~~container-based binary encoded digital signature data;~~

~~any other user specified data;~~

wherein with the creation of and population of said information in said
 container, said container includes at least one overall intrinsic
 data integrity hash check value;

wherein with said computing device system's automated interfacing of
 said graphical image container as binary file formatted type data in
 a direct non-altered single byte precision original 'incrementally-
 filed' data handling and storage method, having said character text
 sectional components encapsulated in said binary file container,
 allows said encapsulated character text formatted data to sustain
 its original sequential filed data form, and

wherein said container's sectional component's creation and processing
 is independent of said container's creation and processing, and

wherein said additional sectional components include intrinsic security feature data
 wherein coupling of said additional sectional component's security feature data
 generates additional intrinsic security feature data associated creation and
 processing integrity is intervention independent of said container's
 association, and

~~wherein said intrinsic data or said additional intrinsic data is stored
 in any one of said sectional components or said additional
 sectional components;~~

~~wherein automated system interfacing as binary file formatted type data in a direct, non-
 altered, single byte precision original 'incrementally filed' data handling and storage
 method, whereby having said character text sectional component encapsulated in said
 binary document container allows said character text to sustain its original sequential
 filed data form, and~~

~~wherein independent creation and processing of said container from said sectional
 component's creation and processing, and~~

~~wherein integrity enhanced non-associated creation and processing intervention from said
 sectional component's creation and processing, and~~

AMj0726f.doc

~~wherein integrity enhanced incorporated~~ sectional component's intrinsic security feature ~~information coupling of said sectional component's security check information with~~ data integrity is enhanced with the inclusion or coupling of other said sectional component's intrinsic security check information, feature data, and

wherein said normative standard graphic image container and said normative standard adapted character text sectional components further allows the electronic document

integrity enhanced intervention and association control of processing and storage from non-desired additional parties,

independent interaction of processing and storage from non-desired additional parties,

independent validation of processing and storage from non-desired additional parties, and

independent processing of and storage in said ~~machine~~ computing device's readable instruction's computing platform.

2. (ORIGINAL AMENDED) The method for the creation of an electronic document for securing information exchange of claim 1, wherein the said normative standard character text based adapted sectional components include digital signature sectional component(s) include signatures of one or more of the following types: information data of a type of any of the following:

- (i) signature;
- (ii) co-signature;
- (iii) counter-signature.

3. (ORIGINAL AMENDED) ~~The~~ The method for the creation of an electronic document for securing information exchange of claim 2, wherein said document container the method further comprises a step of creating one or more additional sectional components adapted for the storage of said normative user specified standard graphical image container based binary encoded digital signature formatted data and storing in said additional sectional components said container based binary encoded digital signature formatted data, wherein said binary encoded container based digital signature sectional component(s) include signatures of one or more of the following types: information data is of a type of any of the following:

- (i) signature;
- (ii) co-signature;
- (iii) counter-signature.

(THIS LISTING IS THE CORRECT AND COMPLETE TEXT OF THE CLAIMS AS OF 7/26/19)

CLAIMS: Latest as of 7/26/2019 (#1 = Independent, #2 thru #4 = Dependant)

1. A method for the creation of an electronic document supporting specific platform and nonessential party independence for securing information exchange, tangibly embodied in a computer readable storage medium, the method, using a computing device, for securing the exchange of information within the securable independent electronic document comprises the steps of:

creating a normative standard graphical image based container adapted for sectional components,

populating the sectional component container with said information using, in a user specified order, the steps of:

creating one or more graphical image sectional components adapted for the storage of normative standard graphical image based formatted data of said graphical image container type and storing user specified normative standard graphical image information data of said information in said created graphical image sectional components,

wherein said graphical image components may include encrypted content wherein said encrypted content has the ability to be decrypted, and

wherein with a set of machine readable instructions in said computing device's system, said graphical image components are processed in an automated fashion within said computing device's system, and

wherein with visual perception by a human user in said computing device's system, said graphical image components are interacted upon and processed in a manual fashion by said user;

creating one or more character text sectional components adapted for the storage of normative standard character text based formatted data and storing user specified normative standard character text information data of said information in said created character text sectional components,

wherein said character text components may include encrypted content wherein said encrypted content has the ability to be decrypted, and

wherein with a set of machine readable instructions in said computing device's system, said character text

components are processed in an automated fashion within said computing device's system, and

wherein with visual perception by a human user in said computing device's system said character text components are interacted upon and processed in a manual fashion by said user;

wherein said character text formatted data comprises any of the following:

scripting text,
rich text,
markup language text,

wherein said normative standard graphic image container and said normative standard adapted character text sectional components further allows the electronic document

integrity enhanced intervention and association control of processing and storage from non-desired additional parties,

independent interaction of processing and storage from non-desired additional parties,

independent validation of processing and storage from non-desired additional parties, and

independent processing of and storage in said computing device's readable instruction computing platform.

2. The method for the creation of an electronic document for securing information exchange of claim 1, wherein the said normative standard character text adapted sectional components include digital signature information data of a type of any of the following:
 - (i) signature;
 - (ii) co-signature;
 - (iii) counter-signature.
3. The method for the creation of an electronic document for securing information exchange of claim 2, wherein the method further comprises a step of creating one or more additional sectional components adapted for the storage of said normative standard graphical image container based binary encoded digital signature formatted data and storing in said additional sectional components said container based binary encoded digital signature formatted data, wherein said binary encoded digital signature information data is of a type of any of the following:
 - (i) signature;
 - (ii) co-signature;
 - (iii) counter-signature.
4. The method for the creation of an electronic document for securing information exchange of claim 3, wherein said sectional components include at least one cyclic redundancy check (CRC) value.

Ref: Securable Independent Electronic Document, Ser #12/316699, filed December 15, 2008

Dear Sir or Madam,

Applicant presents this cover letter and contents comprising Applicants 'AFCP 2.0 Final Office Action Amendment' filed in response to the Final Office Action dated April 26, 2019. Applicant believes contents enclosed will place the application in proper order.

Contents of this amendment request include the following:

<u>Title</u>	<u>Page Count</u>
Certification And Request For Consideration (PTO/SB/434) - John Guymon	1
Certification And Request For Consideration (PTO/SB/434) - Douglas Litsey	1
Amendment in re Final Office Action dated April 26, 2019	16

Thank you for your consideration and time with this correspondence.

Respectfully submitted,

/JohnLewisGuymonJr/

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

<i>Applicant-Initiated Interview Summary</i>	Application No. 12/316,699	Applicant(s) Guymon et al.	
	Examiner KAVEH ABRISHAMKAR	Art Unit 3649	AIA (FITF) Status No

All participants (applicant, applicants representative, PTO personnel):

(1) Kaveh Abrishamkar. (3) _____.

(2) John Guymon. (4) _____.

Date of Interview: 19 June 2019.

Type: Telephonic Video Conference
 Personal [copy given to: applicant applicant's representative]

Exhibit shown or demonstration conducted: Yes No.
If Yes, brief description: _____.

Issues Discussed 101 112 102 103 Others
(For each of the checked box(es) above, please describe below the issue and detailed description of the discussion)

Claim(s) discussed: 1.

Identification of prior art discussed: N/A.

Substance of Interview

(For each issue discussed, provide a detailed description and indicate if agreement was reached. Some topics may include: identification or clarification of a reference or a portion thereof, claim interpretation, proposed amendments, arguments of any applied references etc...)

A general nature of the invention was discussed. The 101 rejection was discussed. The Examiner advised the client that an electronic document is merely a data structure and is not patentable because it is not directed towards one of the four categories of invention. The Examiner suggested revising the claim to direct it towards a method of creating the electronic document (including its different properties) and using that document to secure communication between two parties. No agreement as to patentability was reached..

Applicant recordation instructions: The formal written reply to the last Office action must include the substance of the interview. (See MPEP section 713.04). If a reply to the last Office action has already been filed, applicant is given a non-extendable period of the longer of one month or thirty days from this interview date, or the mailing date of this interview summary form, whichever is later, to file a statement of the substance of the interview.

Examiner recordation instructions: Examiners must summarize the substance of any interview of record. A complete and proper recordation of the substance of an interview should include the items listed in MPEP 713.04 for complete and proper recordation including the identification of the general thrust of each argument or issue discussed, a general indication of any other pertinent matters discussed regarding patentability and the general results or outcome of the interview, to include an indication as to whether or not agreement was reached on the issues raised.

/KAVEH ABRISHAMKAR/
Primary Examiner, Art Unit 3649

Summary of Record of Interview Requirements

Manual of Patent Examining Procedure (MPEP), Section 713.04, Substance of Interview Must be Made of Record

A complete written statement as to the substance of any face-to-face, video conference, or telephone interview with regard to an application must be made of record in the application whether or not an agreement with the examiner was reached at the interview.

Title 37 Code of Federal Regulations (CFR) 1.133 Interviews Paragraph (b)

In every instance where reconsideration is requested in view of an interview with an examiner, a complete written statement of the reasons presented at the interview as warranting favorable action must be filed by the applicant. An interview does not remove the necessity for reply to Office action as specified in §§ 1.111, 1.135. (35 U.S.C. 132)

37 CFR §1.2 Business to be transacted in writing.

All business with the Patent and Trademark Office should be transacted in writing. The personal attendance of applicants or their attorneys or agents at the Patent and Trademark Office is unnecessary. The action of the Patent and Trademark Office will be based exclusively on the written record in the Office. No attention will be paid to any alleged oral promise, stipulation, or understanding in relation to which there is disagreement or doubt.

The action of the Patent and Trademark Office cannot be based exclusively on the written record in the Office if that record is itself incomplete through the failure to record the substance of interviews.

It is the responsibility of the applicant or the attorney or agent to make the substance of an interview of record in the application file, unless the examiner indicates he or she will do so. It is the examiners responsibility to see that such a record is made and to correct material inaccuracies which bear directly on the question of patentability.

Examiners must complete an Interview Summary Form for each interview held where a matter of substance has been discussed during the interview by checking the appropriate boxes and filling in the blanks. Discussions regarding only procedural matters, directed solely to restriction requirements for which interview recordation is otherwise provided for in Section 812.01 of the Manual of Patent Examining Procedure, or pointing out typographical errors or unreadable script in Office actions or the like, are excluded from the interview recordation procedures below. Where the substance of an interview is completely recorded in an Examiners Amendment, no separate Interview Summary Record is required.

The Interview Summary Form shall be given an appropriate Paper No., placed in the right hand portion of the file, and listed on the "Contents" section of the file wrapper. In a personal interview, a duplicate of the Form is given to the applicant (or attorney or agent) at the conclusion of the interview. In the case of a telephone or video-conference interview, the copy is mailed to the applicants correspondence address either with or prior to the next official communication. If additional correspondence from the examiner is not likely before an allowance or if other circumstances dictate, the Form should be mailed promptly after the interview rather than with the next official communication.

The Form provides for recordation of the following information:

- Application Number (Series Code and Serial Number)
- Name of applicant
- Name of examiner
- Date of interview
- Type of interview (telephonic, video-conference, or personal)
- Name of participant(s) (applicant, attorney or agent, examiner, other PTO personnel, etc.)
- An indication whether or not an exhibit was shown or a demonstration conducted
- An identification of the specific prior art discussed
- An indication whether an agreement was reached and if so, a description of the general nature of the agreement (may be by attachment of a copy of amendments or claims agreed as being allowable). Note: Agreement as to allowability is tentative and does not restrict further action by the examiner to the contrary.
- The signature of the examiner who conducted the interview (if Form is not an attachment to a signed Office action)

It is desirable that the examiner orally remind the applicant of his or her obligation to record the substance of the interview of each case. It should be noted, however, that the Interview Summary Form will not normally be considered a complete and proper recordation of the interview unless it includes, or is supplemented by the applicant or the examiner to include, all of the applicable items required below concerning the substance of the interview.

A complete and proper recordation of the substance of any interview should include at least the following applicable items:

- 1) A brief description of the nature of any exhibit shown or any demonstration conducted,-
- 2) an identification of the claims discussed,
- 3) an identification of the specific prior art discussed,
- 4) an identification of the principal proposed amendments of a substantive nature discussed, unless these are already described on the Interview Summary Form completed by the Examiner,
- 5) a brief identification of the general thrust of the principal arguments presented to the examiner,
(The identification of arguments need not be lengthy or elaborate. A verbatim or highly detailed description of the arguments is not required. The identification of the arguments is sufficient if the general nature or thrust of the principal arguments made to the examiner can be understood in the context of the application file. Of course, the applicant may desire to emphasize and fully describe those arguments which he or she feels were or might be persuasive to the examiner.)
- 6) a general indication of any other pertinent matters discussed, and
- 7) if appropriate, the general results or outcome of the interview unless already described in the Interview Summary Form completed by the examiner.

Examiners are expected to carefully review the applicants record of the substance of an interview. If the record is not complete and accurate, the examiner will give the applicant an extendable one month time period to correct the record.

Examiner to Check for Accuracy

If the claims are allowable for other reasons of record, the examiner should send a letter setting forth the examiners version of the statement attributed to him or her. If the record is complete and accurate, the examiner should place the indication, Interview Record OK on the paper recording the substance of the interview along with the date and the examiners initials.

Summary of Record of Interview Requirements

Manual of Patent Examining Procedure (MPEP), Section 713.04, Substance of Interview Must be Made of Record

A complete written statement as to the substance of any face-to-face, video conference, or telephone interview with regard to an application must be made of record in the application whether or not an agreement with the examiner was reached at the interview.

Title 37 Code of Federal Regulations (CFR) 1.133 Interviews Paragraph (b)

In every instance where reconsideration is requested in view of an interview with an examiner, a complete written statement of the reasons presented at the interview as warranting favorable action must be filed by the applicant. An interview does not remove the necessity for reply to Office action as specified in §§ 1.111, 1.135. (35 U.S.C. 132)

37 CFR §1.2 Business to be transacted in writing.

All business with the Patent or Trademark Office should be transacted in writing. The personal attendance of applicants or their attorneys or agents at the Patent and Trademark Office is unnecessary. The action of the Patent and Trademark Office will be based exclusively on the written record in the Office. No attention will be paid to any alleged oral promise, stipulation, or understanding in relation to which there is disagreement or doubt.

The action of the Patent and Trademark Office cannot be based exclusively on the written record in the Office if that record is itself incomplete through the failure to record the substance of interviews.

It is the responsibility of the applicant or the attorney or agent to make the substance of an interview of record in the application file, unless the examiner indicates he or she will do so. It is the examiners responsibility to see that such a record is made and to correct material inaccuracies which bear directly on the question of patentability.

Examiners must complete an Interview Summary Form for each interview held where a matter of substance has been discussed during the interview by checking the appropriate boxes and filling in the blanks. Discussions regarding only procedural matters, directed solely to restriction requirements for which interview recordation is otherwise provided for in Section 812.01 of the Manual of Patent Examining Procedure, or pointing out typographical errors or unreadable script in Office actions or the like, are excluded from the interview recordation procedures below. Where the substance of an interview is completely recorded in an Examiners Amendment, no separate Interview Summary Record is required.

The Interview Summary Form shall be given an appropriate Paper No., placed in the right hand portion of the file, and listed on the "Contents" section of the file wrapper. In a personal interview, a duplicate of the Form is given to the applicant (or attorney or agent) at the conclusion of the interview. In the case of a telephone or video-conference interview, the copy is mailed to the applicants correspondence address either with or prior to the next official communication. If additional correspondence from the examiner is not likely before an allowance or if other circumstances dictate, the Form should be mailed promptly after the interview rather than with the next official communication.

The Form provides for recordation of the following information:

- Application Number (Series Code and Serial Number)
- Name of applicant
- Name of examiner
- Date of interview
- Type of interview (telephonic, video-conference, or personal)
- Name of participant(s) (applicant, attorney or agent, examiner, other PTO personnel, etc.)
- An indication whether or not an exhibit was shown or a demonstration conducted
- An identification of the specific prior art discussed
- An indication whether an agreement was reached and if so, a description of the general nature of the agreement (may be by attachment of a copy of amendments or claims agreed as being allowable). Note: Agreement as to allowability is tentative and does not restrict further action by the examiner to the contrary.
- The signature of the examiner who conducted the interview (if Form is not an attachment to a signed Office action)

It is desirable that the examiner orally remind the applicant of his or her obligation to record the substance of the interview of each case. It should be noted, however, that the Interview Summary Form will not normally be considered a complete and proper recordation of the interview unless it includes, or is supplemented by the applicant or the examiner to include, all of the applicable items required below concerning the substance of the interview.

A complete and proper recordation of the substance of any interview should include at least the following applicable items:

- 1) A brief description of the nature of any exhibit shown or any demonstration conducted,-
- 2) an identification of the claims discussed,
- 3) an identification of the specific prior art discussed,
- 4) an identification of the principal proposed amendments of a substantive nature discussed, unless these are already described on the Interview Summary Form completed by the Examiner,
- 5) a brief identification of the general thrust of the principal arguments presented to the examiner,
(The identification of arguments need not be lengthy or elaborate. A verbatim or highly detailed description of the arguments is not required. The identification of the arguments is sufficient if the general nature or thrust of the principal arguments made to the examiner can be understood in the context of the application file. Of course, the applicant may desire to emphasize and fully describe those arguments which he or she feels were or might be persuasive to the examiner.)
- 6) a general indication of any other pertinent matters discussed, and
- 7) if appropriate, the general results or outcome of the interview unless already described in the Interview Summary Form completed by the examiner.

Examiners are expected to carefully review the applicants record of the substance of an interview. If the record is not complete and accurate, the examiner will give the applicant an extendable one month time period to correct the record.

Examiner to Check for Accuracy

If the claims are allowable for other reasons of record, the examiner should send a letter setting forth the examiners version of the statement attributed to him or her. If the record is complete and accurate, the examiner should place the indication, Interview Record OK on the paper recording the substance of the interview along with the date and the examiners initials.

The time period for reply, if any, is set in the attached communication.

<i>Applicant-Initiated Interview Summary</i>	Application No. 12/316,699	Applicant(s) Guymon et al.	
	Examiner KAVEH ABRISHAMKAR	Art Unit 3649	AIA (FITF) Status No

All participants (applicant, applicants representative, PTO personnel):

- (1) Kaveh Abrishamkar. (3) ____.
- (2) John Guymon. (4) ____.

Date of Interview: 19 June 2019.

Type: Telephonic Video Conference
 Personal [copy given to: applicant applicant's representative]

Exhibit shown or demonstration conducted: Yes No.
If Yes, brief description: ____.

Issues Discussed 101 112 102 103 Others
(For each of the checked box(es) above, please describe below the issue and detailed description of the discussion)

Claim(s) discussed: 1.

Identification of prior art discussed: N/A.

Substance of Interview

(For each issue discussed, provide a detailed description and indicate if agreement was reached. Some topics may include: identification or clarification of a reference or a portion thereof, claim interpretation, proposed amendments, arguments of any applied references etc...)

A general nature of the invention was discussed. The 101 rejection was discussed. The Examiner advised the client that an electronic document is merely a data structure and is not patentable because it is not directed towards one of the four categories of invention. The Examiner suggested revising the claim to direct it towards a method of creating the electronic document (including its different properties) and using that document to secure communication between two parties. No agreement as to patentability was reached..

Applicant recordation instructions: The formal written reply to the last Office action must include the substance of the interview. (See MPEP section 713.04). If a reply to the last Office action has already been filed, applicant is given a non-extendable period of the longer of one month or thirty days from this interview date, or the mailing date of this interview summary form, whichever is later, to file a statement of the substance of the interview.

Examiner recordation instructions: Examiners must summarize the substance of any interview of record. A complete and proper recordation of the substance of an interview should include the items listed in MPEP 713.04 for complete and proper recordation including the identification of the general thrust of each argument or issue discussed, a general indication of any other pertinent matters discussed regarding patentability and the general results or outcome of the interview, to include an indication as to whether or not agreement was reached on the issues raised.

/KAVEH ABRISHAMKAR/ Primary Examiner, Art Unit 3649	
--	--

Summary of Record of Interview Requirements

Manual of Patent Examining Procedure (MPEP), Section 713.04, Substance of Interview Must be Made of Record

A complete written statement as to the substance of any face-to-face, video conference, or telephone interview with regard to an application must be made of record in the application whether or not an agreement with the examiner was reached at the interview.

Title 37 Code of Federal Regulations (CFR) 1.133 Interviews

Paragraph (b)

In every instance where reconsideration is requested in view of an interview with an examiner, a complete written statement of the reasons presented at the interview as warranting favorable action must be filed by the applicant. An interview does not remove the necessity for reply to Office action as specified in §§ 1.111, 1.135. (35 U.S.C. 132)

37 CFR §1.2 Business to be transacted in writing.

All business with the Patent or Trademark Office should be transacted in writing. The personal attendance of applicants or their attorneys or agents at the Patent and Trademark Office is unnecessary. The action of the Patent and Trademark Office will be based exclusively on the written record in the Office. No attention will be paid to any alleged oral promise, stipulation, or understanding in relation to which there is disagreement or doubt.

The action of the Patent and Trademark Office cannot be based exclusively on the written record in the Office if that record is itself incomplete through the failure to record the substance of interviews.

It is the responsibility of the applicant or the attorney or agent to make the substance of an interview of record in the application file, unless the examiner indicates he or she will do so. It is the examiners responsibility to see that such a record is made and to correct material inaccuracies which bear directly on the question of patentability.

Examiners must complete an Interview Summary Form for each interview held where a matter of substance has been discussed during the interview by checking the appropriate boxes and filling in the blanks. Discussions regarding only procedural matters, directed solely to restriction requirements for which interview recordation is otherwise provided for in Section 812.01 of the Manual of Patent Examining Procedure, or pointing out typographical errors or unreadable script in Office actions or the like, are excluded from the interview recordation procedures below. Where the substance of an interview is completely recorded in an Examiners Amendment, no separate Interview Summary Record is required.

The Interview Summary Form shall be given an appropriate Paper No., placed in the right hand portion of the file, and listed on the "Contents" section of the file wrapper. In a personal interview, a duplicate of the Form is given to the applicant (or attorney or agent) at the conclusion of the interview. In the case of a telephone or video-conference interview, the copy is mailed to the applicants correspondence address either with or prior to the next official communication. If additional correspondence from the examiner is not likely before an allowance or if other circumstances dictate, the Form should be mailed promptly after the interview rather than with the next official communication.

The Form provides for recordation of the following information:

- Application Number (Series Code and Serial Number)
- Name of applicant
- Name of examiner
- Date of interview
- Type of interview (telephonic, video-conference, or personal)
- Name of participant(s) (applicant, attorney or agent, examiner, other PTO personnel, etc.)
- An indication whether or not an exhibit was shown or a demonstration conducted
- An identification of the specific prior art discussed
- An indication whether an agreement was reached and if so, a description of the general nature of the agreement (may be by attachment of a copy of amendments or claims agreed as being allowable). Note: Agreement as to allowability is tentative and does not restrict further action by the examiner to the contrary.
- The signature of the examiner who conducted the interview (if Form is not an attachment to a signed Office action)

It is desirable that the examiner orally remind the applicant of his or her obligation to record the substance of the interview of each case. It should be noted, however, that the Interview Summary Form will not normally be considered a complete and proper recordation of the interview unless it includes, or is supplemented by the applicant or the examiner to include, all of the applicable items required below concerning the substance of the interview.

A complete and proper recordation of the substance of any interview should include at least the following applicable items:

- 1) A brief description of the nature of any exhibit shown or any demonstration conducted,-
- 2) an identification of the claims discussed,
- 3) an identification of the specific prior art discussed,
- 4) an identification of the principal proposed amendments of a substantive nature discussed, unless these are already described on the Interview Summary Form completed by the Examiner,
- 5) a brief identification of the general thrust of the principal arguments presented to the examiner,
(The identification of arguments need not be lengthy or elaborate. A verbatim or highly detailed description of the arguments is not required. The identification of the arguments is sufficient if the general nature or thrust of the principal arguments made to the examiner can be understood in the context of the application file. Of course, the applicant may desire to emphasize and fully describe those arguments which he or she feels were or might be persuasive to the examiner.)
- 6) a general indication of any other pertinent matters discussed, and
- 7) if appropriate, the general results or outcome of the interview unless already described in the Interview Summary Form completed by the examiner.

Examiners are expected to carefully review the applicants record of the substance of an interview. If the record is not complete and accurate, the examiner will give the applicant an extendable one month time period to correct the record.

Examiner to Check for Accuracy

If the claims are allowable for other reasons of record, the examiner should send a letter setting forth the examiners version of the statement attributed to him or her. If the record is complete and accurate, the examiner should place the indication, Interview Record OK on the paper recording the substance of the interview along with the date and the examiners initials.

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

<i>Applicant-Initiated Interview Summary</i>	Application No. 12/316,699	Applicant(s) Guymon et al.	
	Examiner KAVEH ABRISHAMKAR	Art Unit 3649	AIA (FITF) Status No

All participants (applicant, applicants representative, PTO personnel):

(1) Kaveh Abrishamkar. (3) _____.

(2) John Guymon. (4) _____.

Date of Interview: 20 June 2019.

Type: Telephonic Video Conference
 Personal [copy given to: applicant applicant's representative]

Exhibit shown or demonstration conducted: Yes No.
If Yes, brief description: _____.

Issues Discussed 101 112 102 103 Others
(For each of the checked box(es) above, please describe below the issue and detailed description of the discussion)

Claim(s) discussed: 1-4.

Identification of prior art discussed: N/A.

Substance of Interview

(For each issue discussed, provide a detailed description and indicate if agreement was reached. Some topics may include: identification or clarification of a reference or a portion thereof, claim interpretation, proposed amendments, arguments of any applied references etc...)

A general nature of the invention was discussed. The 101 rejection was discussed and possible amendments to overcome the 101 rejection were also discussed. No agreement to the patentability of the claims was reached..

Applicant recordation instructions: The formal written reply to the last Office action must include the substance of the interview. (See MPEP section 713.04). If a reply to the last Office action has already been filed, applicant is given a non-extendable period of the longer of one month or thirty days from this interview date, or the mailing date of this interview summary form, whichever is later, to file a statement of the substance of the interview.

Examiner recordation instructions: Examiners must summarize the substance of any interview of record. A complete and proper recordation of the substance of an interview should include the items listed in MPEP 713.04 for complete and proper recordation including the identification of the general thrust of each argument or issue discussed, a general indication of any other pertinent matters discussed regarding patentability and the general results or outcome of the interview, to include an indication as to whether or not agreement was reached on the issues raised.

Summary of Record of Interview Requirements

Manual of Patent Examining Procedure (MPEP), Section 713.04, Substance of Interview Must be Made of Record

A complete written statement as to the substance of any face-to-face, video conference, or telephone interview with regard to an application must be made of record in the application whether or not an agreement with the examiner was reached at the interview.

Title 37 Code of Federal Regulations (CFR) 1.133 Interviews

Paragraph (b)

In every instance where reconsideration is requested in view of an interview with an examiner, a complete written statement of the reasons presented at the interview as warranting favorable action must be filed by the applicant. An interview does not remove the necessity for reply to Office action as specified in §§ 1.111, 1.135. (35 U.S.C. 132)

37 CFR §1.2 Business to be transacted in writing.

All business with the Patent or Trademark Office should be transacted in writing. The personal attendance of applicants or their attorneys or agents at the Patent and Trademark Office is unnecessary. The action of the Patent and Trademark Office will be based exclusively on the written record in the Office. No attention will be paid to any alleged oral promise, stipulation, or understanding in relation to which there is disagreement or doubt.

The action of the Patent and Trademark Office cannot be based exclusively on the written record in the Office if that record is itself incomplete through the failure to record the substance of interviews.

It is the responsibility of the applicant or the attorney or agent to make the substance of an interview of record in the application file, unless the examiner indicates he or she will do so. It is the examiners responsibility to see that such a record is made and to correct material inaccuracies which bear directly on the question of patentability.

Examiners must complete an Interview Summary Form for each interview held where a matter of substance has been discussed during the interview by checking the appropriate boxes and filling in the blanks. Discussions regarding only procedural matters, directed solely to restriction requirements for which interview recordation is otherwise provided for in Section 812.01 of the Manual of Patent Examining Procedure, or pointing out typographical errors or unreadable script in Office actions or the like, are excluded from the interview recordation procedures below. Where the substance of an interview is completely recorded in an Examiners Amendment, no separate Interview Summary Record is required.

The Interview Summary Form shall be given an appropriate Paper No., placed in the right hand portion of the file, and listed on the "Contents" section of the file wrapper. In a personal interview, a duplicate of the Form is given to the applicant (or attorney or agent) at the conclusion of the interview. In the case of a telephone or video-conference interview, the copy is mailed to the applicants correspondence address either with or prior to the next official communication. If additional correspondence from the examiner is not likely before an allowance or if other circumstances dictate, the Form should be mailed promptly after the interview rather than with the next official communication.

The Form provides for recordation of the following information:

- Application Number (Series Code and Serial Number)
- Name of applicant
- Name of examiner
- Date of interview
- Type of interview (telephonic, video-conference, or personal)
- Name of participant(s) (applicant, attorney or agent, examiner, other PTO personnel, etc.)
- An indication whether or not an exhibit was shown or a demonstration conducted
- An identification of the specific prior art discussed
- An indication whether an agreement was reached and if so, a description of the general nature of the agreement (may be by attachment of a copy of amendments or claims agreed as being allowable). Note: Agreement as to allowability is tentative and does not restrict further action by the examiner to the contrary.
- The signature of the examiner who conducted the interview (if Form is not an attachment to a signed Office action)

It is desirable that the examiner orally remind the applicant of his or her obligation to record the substance of the interview of each case. It should be noted, however, that the Interview Summary Form will not normally be considered a complete and proper recordation of the interview unless it includes, or is supplemented by the applicant or the examiner to include, all of the applicable items required below concerning the substance of the interview.

A complete and proper recordation of the substance of any interview should include at least the following applicable items:

- 1) A brief description of the nature of any exhibit shown or any demonstration conducted,-
- 2) an identification of the claims discussed,
- 3) an identification of the specific prior art discussed,
- 4) an identification of the principal proposed amendments of a substantive nature discussed, unless these are already described on the Interview Summary Form completed by the Examiner,
- 5) a brief identification of the general thrust of the principal arguments presented to the examiner,
(The identification of arguments need not be lengthy or elaborate. A verbatim or highly detailed description of the arguments is not required. The identification of the arguments is sufficient if the general nature or thrust of the principal arguments made to the examiner can be understood in the context of the application file. Of course, the applicant may desire to emphasize and fully describe those arguments which he or she feels were or might be persuasive to the examiner.)
- 6) a general indication of any other pertinent matters discussed, and
- 7) if appropriate, the general results or outcome of the interview unless already described in the Interview Summary Form completed by the examiner.

Examiners are expected to carefully review the applicants record of the substance of an interview. If the record is not complete and accurate, the examiner will give the applicant an extendable one month time period to correct the record.

Examiner to Check for Accuracy

If the claims are allowable for other reasons of record, the examiner should send a letter setting forth the examiners version of the statement attributed to him or her. If the record is complete and accurate, the examiner should place the indication, Interview Record OK on the paper recording the substance of the interview along with the date and the examiners initials.

JUN 19 2019

In the United States Patent and Trademark Office

Application Number: 12/316,699
Application Filed: December 15, 2008
Applicant: John Lewis Guymon Jr
Application Title: Securable Independent Electronic Document
Examiner/GAU: Kaveh Abrishamkar

Applicant's details to be shared with Examiner during June 20, 2019 Interview

June 19, 2019

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir/ Madam:

In preparation for the interview scheduled with the Examiner on June 20, 2019, Applicant submits the following items that will be discussed accordingly.

Applicant will discuss amending the claims.

Application believes application and claims adheres to 35 USC 101, specifically a new and useful process and any new and useful improvement thereof. Additionally, Applicant believes maintains the invention meets the criteria for an article of manufacture and a composition of matter in its generation and storage.

Applicant will address specification detail and previous claim construction that is believed to be or have been sufficient for the invention's understanding.

Applicant will present support for 35 USC 101 patentability. Areas to be discussed include but are not limited to:

Details of the items involved, steps taken and specific methods used in the process of the electronic document generation, specifically the world wide ISO formats for graphic image and character text handling and the interaction between said formats.

Details of the structured steps in the process that are unique and improvements over prior art.

Details of how a particular machine or apparatus is used in the transformation and generation of the inventive product.

JUN 19 2019

How the claims do not recite a judicial exception or recites additional elements that integrate any exception into a practical application.

Discuss and demonstrate significant differences of the invention from that of just an abstract idea, structured data, law of nature or a natural phenomenon.

Show that the invention is a patentable covered business method.

Show that the invention is a technological invention that is novel and unobvious over prior art that solves a technical problem using a technical solution.

Show that the claims are not directed to an abstract idea but rather an improvement to computer functionality and are directed to a specific implementation of a solution to a problem in the software arts.

Show that the claims effectively transform particular articles to a different and more meaningful state or thing, adding 'something more'.

Show the invention is built, assembled in a specific fashion.

Supply examiner with instances of many applications of patent that have issued that claim that of Applicant's invention and how said instances are near identical in specification and claim construction.

Mention the previous construction of claims in the application that were of process, method and system type.

Very respectfully,v

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTHS FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 29 January 2019.
 A declaration(s)/affidavit(s) under **37 CFR 1.130(b)** was/were filed on _____.
- 2a) This action is **FINAL**. 2b) This action is non-final.
- 3) An election was made by the applicant in response to a restriction requirement set forth during the interview on _____; the restriction requirement and election have been incorporated into this action.
- 4) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims*

- 5) Claim(s) 1-4 is/are pending in the application.
5a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 6) Claim(s) _____ is/are allowed.
- 7) Claim(s) 1-4 is/are rejected.
- 8) Claim(s) _____ is/are objected to.
- 9) Claim(s) _____ are subject to restriction and/or election requirement

* If any claims have been determined allowable, you may be eligible to benefit from the **Patent Prosecution Highway** program at a participating intellectual property office for the corresponding application. For more information, please see http://www.uspto.gov/patents/init_events/pph/index.jsp or send an inquiry to PPHfeedback@uspto.gov.

Application Papers

- 10) The specification is objected to by the Examiner.
- 11) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

Certified copies:

- a) All b) Some** c) None of the:
- Certified copies of the priority documents have been received.
 - Certified copies of the priority documents have been received in Application No. _____.
 - Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

** See the attached detailed Office action for a list of the certified copies not received.

- 3) Interview Summary (PTO-413)
Paper No(s)/Mail Date _____.
- 4) Other: _____.

DETAILED ACTION

Notice of Pre-AIA or AIA Status

The present application is being examined under the pre-AIA first to invent provisions.

Response to Amendment

1. This action is in response to the amendment filed on January 29, 2019. Claims 1-4 were previously pending consideration. Per the received amendment, no claims were added or canceled.
1. Claims 1-4 are currently pending consideration.

Response to Arguments

Applicant's arguments filed on January 29, 2019 have been fully considered but they are not persuasive for the following reasons:

The Applicant argues that the claims should not be rejected under 35 U.S.C. 101 because the claims are directed towards a process, machine, article of manufacture or a composition of matter. To be eligible, the claims do not need to fall into all four categories, but just need to fall into one category of invention. The Applicant states that the claims are statutory because the electronic document, as defined in the specification, is built using a process, an electronic apparatus, is made (manufacture), and is stored on a computer medium (composition of matter). First, the claim itself has to be directed towards statutory subject matter. The claims are read in light of the specification but nothing in the specification would transform the claims into statutory subject matter since the claims are directed towards an "electronic document."

Pursuant to section 101, an inventor may obtain a patent for "any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof." 35 U.S.C. 101. For all categories except process claims, the eligible subject matter must exist in some

physical or tangible form. To qualify as a machine under section 101, the claimed invention must be a "concrete thing, consisting of parts, or of certain devices and combination of devices." *Burr v. Duryee*, 68 U.S. 531, 570, 1 Wall. 531, 17 L.Ed. 650 (1863). To qualify as a manufacture, the invention must be a tangible article that is given a new form, quality, property, or combination through man-made or artificial means. *Diamond v. Chakrabarty*, 447 U.S. 303, 308, 100 S.Ct. 2204, 65 L.Ed.2d 144 (1980). Likewise, a composition of matter requires the combination of two or more substances and includes all composite articles. Here, the electronic document described in the specification and in the claims is not a tangible or physical thing, and thus does not fall within any of the categories of eligible subject matter. Claim 1 describes the electronic document as a collection of different fields/components as containers in an electronic document which does not fall into one of the four statutory categories of invention. *Digitech Image Technologies v. Electronics for Imaging*, 758 F.3d 1344.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-4 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The claim(s) does/do not fall within at least one of the four categories of patent eligible subject matter because the claims are directed towards an electronic document which is a data structure which is not a machine, process, composition of matter or an article of manufacture. Data structures are not patent-eligible (see *Digitech Image Techs., LLC v. Elecs. For Imaging, Inc.* (Fed. Cir. July 11, 2014)).

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to KAVEH ABRISHAMKAR whose telephone number is (571)272-3786. The examiner can normally be reached on M-F 9-5:30.

Examiner interviews are available via telephone, in-person, and video conferencing using a USPTO supplied web-based collaboration tool. To schedule an interview, applicant is encouraged to use the USPTO Automated Interview Request (AIR) at <http://www.uspto.gov/interviewpractice>.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Hodge can be reached on 571-272-2097. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available

through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

AIA (FITF) Status

No

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTHS FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 29 January 2019.
 A declaration(s)/affidavit(s) under **37 CFR 1.130(b)** was/were filed on ____.
- 2a) This action is **FINAL**. 2b) This action is non-final.
- 3) An election was made by the applicant in response to a restriction requirement set forth during the interview on ____; the restriction requirement and election have been incorporated into this action.
- 4) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims*

- 5) Claim(s) 1-4 is/are pending in the application.
5a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 6) Claim(s) ____ is/are allowed.
- 7) Claim(s) 1-4 is/are rejected.
- 8) Claim(s) ____ is/are objected to.
- 9) Claim(s) ____ are subject to restriction and/or election requirement

* If any claims have been determined allowable, you may be eligible to benefit from the **Patent Prosecution Highway** program at a participating intellectual property office for the corresponding application. For more information, please see http://www.uspto.gov/patents/init_events/pph/index.jsp or send an inquiry to PPHfeedback@uspto.gov.

Application Papers

- 10) The specification is objected to by the Examiner.
- 11) The drawing(s) filed on ____ is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

Certified copies:

- a) All b) Some** c) None of the:
1. Certified copies of the priority documents have been received.
2. Certified copies of the priority documents have been received in Application No. ____.
3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

** See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) Notice of References Cited (PTO-892)
- 2) Information Disclosure Statement(s) (PTO/SB/08a and/or PTO/SB/08b)
Paper No(s)/Mail Date _____.
- 3) Interview Summary (PTO-413)
Paper No(s)/Mail Date _____.
- 4) Other: _____.

DETAILED ACTION

Notice of Pre-AIA or AIA Status

The present application is being examined under the pre-AIA first to invent provisions.

Response to Amendment

1. This action is in response to the amendment filed on January 29, 2019. Claims 1-4 were previously pending consideration. Per the received amendment, no claims were added or canceled.
1. Claims 1-4 are currently pending consideration.

Response to Arguments

Applicant's arguments filed on January 29, 2019 have been fully considered but they are not persuasive for the following reasons:

The Applicant argues that the claims should not be rejected under 35 U.S.C. 101 because the claims are directed towards a process, machine, article of manufacture or a composition of matter. To be eligible, the claims do not need to fall into all four categories, but just need to fall into one category of invention. The Applicant states that the claims are statutory because the electronic document, as defined in the specification, is built using a process, an electronic apparatus, is made (manufacture), and is stored on a computer medium (composition of matter). First, the claim itself has to be directed towards statutory subject matter. The claims are read in light of the specification but nothing in the specification would transform the claims into statutory subject matter since the claims are directed towards an "electronic document."

Pursuant to section 101, an inventor may obtain a patent for "any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof." 35 U.S.C. 101. For all categories except process claims, the eligible subject matter must exist in some

Art Unit: 3649

physical or tangible form. To qualify as a machine under section 101, the claimed invention must be a "concrete thing, consisting of parts, or of certain devices and combination of devices." *Burr v. Duryee*, 68 U.S. 531, 570, 1 Wall. 531, 17 L.Ed. 650 (1863). To qualify as a manufacture, the invention must be a tangible article that is given a new form, quality, property, or combination through man-made or artificial means. *Diamond v. Chakrabarty*, 447 U.S. 303, 308, 100 S.Ct. 2204, 65 L.Ed.2d 144 (1980). Likewise, a composition of matter requires the combination of two or more substances and includes all composite articles. Here, the electronic document described in the specification and in the claims is not a tangible or physical thing, and thus does not fall within any of the categories of eligible subject matter. Claim 1 describes the electronic document as a collection of different fields/components as containers in an electronic document which does not fall into one of the four statutory categories of invention. *Digitech Image Technologies v. Electronics for Imaging*, 758 F.3d 1344.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-4 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The claim(s) does/do not fall within at least one of the four categories of patent eligible subject matter because the claims are directed towards an electronic document which is a data structure which is not a machine, process, composition of matter or an article of manufacture. Data structures are not patent-eligible (see *Digitech Image Techs., LLC v. Elecs. For Imaging, Inc.* (Fed. Cir. July 11, 2014)).

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to KAVEH ABRISHAMKAR whose telephone number is (571)272-3786. The examiner can normally be reached on M-F 9-5:30.

Examiner interviews are available via telephone, in-person, and video conferencing using a USPTO supplied web-based collaboration tool. To schedule an interview, applicant is encouraged to use the USPTO Automated Interview Request (AIR) at <http://www.uspto.gov/interviewpractice>.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Hodge can be reached on 571-272-2097. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available

In re Application of
Guymon et al.
Application No. 12/316,699
Filed: 12/15/2008
For: SECURABLE INDEPENDENT
ELECTRONIC DOCUMENT

:
:
: DECISION ON PETITION
:
:
:

This is a decision on the renewed petition filed July 24, 2018 requesting supervisory review of the May 24, 2018 petition decision of applicant's August 29, 2017 petition¹ under 37 CFR 1.183 to waive rules and accept papers which are not signed by all inventors. The petitioner requests review under 37 CFR 1.181 by the Director.²

In the May 24, 2018 petition decision, applicant was instructed that "[m]oving forward, as set forth in 37 CFR 1.33(b) and 37 CFR 1.42(a), all submissions must be properly signed by all interested parties to be considered." The interested parties in the instant application are Mr. John Guymon and Mr. Douglas Litsey. The July 24, 2018 petition is signed by Mr. John Guymon; however, Mr. Litsey's signature does not appear on the document. As such, arguments towards petitionable matters will not be considered.

Because the petition filed July 24, 2018 under 37 CFR 1.183 is not properly signed, it is not being considered. The status request of the instant application will be addressed.

Request to Waive the Rules under 37 CFR 1.183

¹ Improperly signed petitions have also come into the Office on August 29, 2017, January 3, 2018, and April 9, 2018. However, because these petitions were not signed by all joint inventors, their content was not addressed in the July 24, 2018 petition decision.

² 37 CFR 1.181(e) provides that "[t]he director may delegate appropriate Patent and Trademark Officials the determination of petitions."

In the May 24, 2018 petition decision, applicant was instructed that “[m]oving forward, as set forth in 37 CFR 1.33(b) and 37 CFR 1.42(a), all submissions must be properly signed by all interested parties to be considered.” The July 24, 2018 petition is signed by Mr. John Guymon; however, Mr. Litsey’s signature does not appear on the document. As such, arguments will not be considered.³

Accordingly, the petition to waive the rules under 37 CFR 1.183 is not being treated.

Status Request

Petitioner requests clarification and properness of the application’s status and required steps or procedures needed for further application prosecution. Of the three statuses listed in the July 24, 2018 petition, “currently in PAIR, the application has a status value of thirty (30) – **‘Docketed New Case – Ready for Examination’** whereas the PAIR bulk system has a status of one hundred and sixty-one (161) – **‘Abandoned – Failure to Respond to an Office Action’** and the PED bulk system has a status of eighty-three (83) – **‘Advisory Action Mailed’**,” Petitioner is directed to PAIR for future status inquires.

As provided in the Public Application Information Retrieval (PAIR)⁴, the status is currently indicated as “Response to Non-Final Office Action Entered and Forwarded to Examiner” (status 71). On August 6, 2018, the examiner issued an Office action. On November 6, 2018, Mr. Guymon filed a response to the August 6, 2018 Office action. A notice of non-compliance was issued by the Office on November 29, 2018 because the November 6, 2018 claim amendments did not provide a proper status identifier as set forth in 37 CFR 1.121(c). Furthermore, the November 6, 2018 response is improperly signed because Mr. Litsey’s signature does not appear on the document. Pursuant to 37 CFR 1.33(b), amendments and other papers filed in the application must be signed by all of the joint inventors (applicants), a registered patent practitioner, or an assignee as provided for under 37 CFR 3.71(b). The January 29, 2019 response after non-final action also does not include Mr. Litsey’s signature and is therefore improperly signed.

Petitioner further notes “the submission of the extraordinary circumstances in the petition which the office has filed incorrectly under Applicant’s Request for Refund petition dated August 24, 2015.” Petitioner alleges that the paper has been incorrectly filed; however, it has been provided a document code that aligns with the petition for refund included in the paper. It is noted that all subjects in

³ While the arguments are not being considered, these issues were previously addressed on the merits in the May 24, 2018 petition decision.

⁴ MPEP 203.08 provides that “[s]tatus information relating to patent applications is available through the Patent Application Information Retrieval (PAIR) system... Applicants and other persons seeking status regarding an application should check the PAIR system on the Office website at www.uspto.gov/patents-application-process/checking-application-status/check-filing-status-your-patent-application.”

this document were addressed in the petition decision issued on March 7, 2016. Moving forward, pursuant to 37 CFR 1.4(c), "each distinct subject, inquiry or order must be contained in a separate paper to avoid confusion and delay in answering papers dealing with different subjects."

Petitioner further asserts that the "reconsideration of Applicant's correction of inventorship under 37 CFR 1.48 and Request for Refund... should have and should be considered by a different Office than the Office of Petitions." MPEP 1001.01 provides that "[t]he delegations set forth in this Chapter do not confer a right to have a matter decided by a specific Office official, rather, such delegations aid in the efficient treatment of petitions by the Office."

Further correspondence with respect to these matters should be addressed as follows:

JAN 29 2019

In the United States Patent and Trademark Office

Application Number: 12/316,699
Application Filed: December 15, 2008
Applicant: John Lewis Guymon Jr
Application Title: Securable Independent Electronic Document
Examiner/GAU: Kaveh Abrishamkar

**Corrected Amendment (Claims with underline & strike through)
in re Notice of Non-Compliant Amendment November 29, 2018
for original Office Action of August 6, 2018**

January 28, 2019

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir/ Madam:

In response to the Notice of Non Compliant Amendment dated November 29, 2018, Applicant hereby submits this updated amendment to the Application of Patent, #12/316699, filed December 15, 2008 and remarks as follows: (NOTE: No changes have been made to the following remarks section - only ~~strikeout~~ and underlines have been added to the amended claims.)

SPECIFICATION:
Specification not changed.

CLAIMS:
Amended, printed and incorporated as separate document.

DRAWINGS:
Drawings not changed.

REMARKS:
In regard to '*Claim Objections*':

Applicant has removed the few remaining instances where the language "can be" was used correcting the said instances accordingly narrowing the scope of the claims describing the invention more appropriately.

AMj0128j.doc

JAN 29 2019

Securable Independent Electronic Document
Guymon, et alSerial No.: 12/316,699 Amendment
Page 2 of 3

In regard to '*Claim Rejections - 35 U.S.C. 101*':

The statute 35 U.S.C. 101 references process, machine, manufacture and composition of matter or the improvement thereof. In support of 35 U.S.C 101, the electronic document described in the specification is:

- 1) Built and assembled in a user defined specific fashion ('process');
- 2) An electronic apparatus with definite function performing a particular task ('machine');
- 3) Made, produced, built, constructed or fabricated ('manufacture');
- 4) A tangibly embodied form of electronic substance stored on a computer medium ('composition of "electronic" matter').

Therefore, the electronic document described in the specification and claims supports, adheres to and is in the confines of 35 U.S.C 101.

The electronic document described in the specification and claims is similar but superior to specification referenced prior art including the widely used and well known Portable Document Format ('PDF') document by Adobe, Inc. that is not considered to be that of a 'data structure' format.

The electronic document described in the specification and claims is a combination of conventional elements in a conventional manner that includes functionality and other tangible digital type items.

The electronic document described in the specification and claims is not a data structure in itself as it incorporates a multiple count of unique and original user specified and defined data structures and/or elements as well as functionality to which those data structures and/or elements and operations of said data and/or elements are used, maintained or otherwise manipulated.

CLAIMS: (#1 = Amended original claim, #2 thru #4 = original with no change)

1. (ORIGINAL AMENDED) An electronic document for secured information exchange supporting independence of specific platform and of nonessential party, tangibly embodied in a computer readable storage medium, the securable independent electronic document comprising:

a normative standard graphical image based container adapted for sectional components, the graphic image sectional component container comprising:

~~a one or more graphical image sectional components wherein said image component~~ adapted for storing graphical image data of said graphic image container type,

wherein said ~~component~~ graphical image components may include encrypted content wherein said encrypted content ~~can be~~ has the ability to be decrypted, and

wherein with a set of machine readable instructions in a computer system said ~~component~~ graphical image components ~~can be~~ are processed in an automated fashion by said computer system, and

wherein ~~if visually perceived~~ with visual perception by a human user, said ~~component~~ graphical image components ~~can be~~ are interacted upon and processed in a manual fashion by said user; and

a one or more character text sectional components adapted for storing normative standard character text based ~~digital signature~~ formatted data,

wherein said character text components may include encrypted content wherein said encrypted content has the ability to be decrypted, and

wherein with a set of machine readable instructions in a computer system said ~~component~~ character text components ~~can be~~ are processed in an automated fashion by said computer system, and

wherein ~~if visually perceived~~ with visual perception by a human user said ~~component~~ character text components ~~can be~~ are interacted upon and processed in a manual fashion by said user;

and, if user specified, additional sectional components

wherein said additional components adapted for the storage of any of the following data types:

character text data said character text comprising scripting text, rich text, markup language text, or other character text

wherein said character text ~~can~~ has the ability to include
one or more of the following:

a character text Uniform Resource Locator (URL),
encoded data

wherein said encoded data comprising encrypted or
embedded data of any type including that of the
inscribed herein securable independent electronic
document type,

graphic image data,
raw binary data,
intrinsic security feature data,
container based binary encoded digital signature data,
any other user specified data;

wherein said additional sectional components include intrinsic security
feature data wherein coupling of said additional sectional
~~component(s)~~ component's security feature data generates additional
intrinsic security feature data

wherein said intrinsic data or said additional intrinsic data ~~can be~~ is
stored in any one of said sectional ~~component(s)~~ components
or said additional sectional components,

wherein automated system interfacing as binary file formatted type data in a direct, non-
altered, single byte precision original 'incrementally-filed' data handling and storage
method, whereby having said character text sectional component encapsulated in said
binary document container allows said character text to sustain its original sequential
filed data form, and

wherein independent creation and processing of said container from said sectional
~~components'~~ component's creation and processing, and

wherein integrity enhanced non-associated creation and processing intervention from said
sectional ~~components'~~ component's creation and processing, and

wherein integrity enhanced incorporated security feature information coupling of said
sectional ~~components'~~ component's security check information with other said
sectional ~~components'~~ component's security check information, and

wherein said normative standard graphic image container and said normative standard
character text sectional components further allows the electronic document

integrity enhanced intervention and association control of processing and storage
from non-desired additional parties,

independent interaction of processing and storage from non-desired additional parties,

independent validation of processing and storage from non-desired additional parties, and

independent processing of and storage in said machine readable instruction's computing platform;

2. (ORIGINAL AMENDED) The electronic document of claim 1, wherein said normative standard character text based digital signature sectional component(s) include signatures of one or more of the following types:

- (i) signature;
- (ii) co-signature;
- (iii) counter-signature.

3. (ORIGINAL UNCHANGED) The electronic document of claim 2, wherein said document container further comprises additional user specified binary encoded digital signature sectional components, wherein said binary encoded container based digital signature sectional component(s) include signatures of one or more of the following types:

- (i) signature;
- (ii) co-signature;
- (iii) counter-signature.

4. (ORIGINAL UNCHANGED) The electronic document of claim 3, wherein said sectional components include at least one cyclic redundancy check (CRC) value.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

** If the "Highest Number Previously Paid For" IN THIS SPACE is less than 20, enter "20".						/KAREN T WASHINGTON/
*** If the "Highest Number Previously Paid For" IN THIS SPACE is less than 3, enter "3".						
The "Highest Number Previously Paid For" (Total or Independent) is the highest number found in the appropriate box in column 1.						

This collection of information is required by 37 CFR 1.16. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**
 If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

<i>Applicant-Initiated Interview Summary</i>	Application No. 12/316,699	Applicant(s) Guymon et al.	
	Examiner KAVEH ABRISHAMKAR	Art Unit 3649	AIA Status No

All participants (applicant, applicants representative, PTO personnel):

(1) Kaveh Abrishamkar. (3) ____.

(2) John Lewis Guymon. (4) ____.

Date of Interview: 08 January 2019.

Type: Telephonic Video Conference
 Personal [copy given to: applicant applicant's representative]

Exhibit shown or demonstration conducted: Yes No.
If Yes, brief description: ____.

Issues Discussed 101 112 102 103 Others
(For each of the checked box(es) above, please describe below the issue and detailed description of the discussion)

Claim(s) discussed: 1-4.

Identification of prior art discussed: N/A.

Substance of Interview

(For each issue discussed, provide a detailed description and indicate if agreement was reached. Some topics may include: identification or clarification of a reference or a portion thereof, claim interpretation, proposed amendments, arguments of any applied references etc...)

Applicant had questions about the notice of non-complaint amendment mailed on 11/29/2018. The Examiner notified the Applicant that the claims needed proper status identifiers and also strikethroughs and underlines were appropriate.

Applicant recordation instructions: The formal written reply to the last Office action must include the substance of the interview. (See MPEP section 713.04). If a reply to the last Office action has already been filed, applicant is given a non-extendable period of the longer of one month or thirty days from this interview date, or the mailing date of this interview summary form, whichever is later, to file a statement of the substance of the interview

Examiner recordation instructions: Examiners must summarize the substance of any interview of record. A complete and proper recordation of the substance of an interview should include the items listed in MPEP 713.04 for complete and proper recordation including the identification of the general thrust of each argument or issue discussed, a general indication of any other pertinent matters discussed regarding patentability and the general results or outcome of the interview, to include an indication as to whether or not agreement was reached on the issues raised.

/KAVEH ABRISHAMKAR/ Primary Examiner, Art Unit 3649	
--	--

Summary of Record of Interview Requirements

Manual of Patent Examining Procedure (MPEP), Section 713.04, Substance of Interview Must be Made of Record

A complete written statement as to the substance of any face-to-face, video conference, or telephone interview with regard to an application must be made of record in the application whether or not an agreement with the examiner was reached at the interview.

Title 37 Code of Federal Regulations (CFR) 1.133 Interviews

Paragraph (b)

In every instance where reconsideration is requested in view of an interview with an examiner, a complete written statement of the reasons presented at the interview as warranting favorable action must be filed by the applicant. An interview does not remove the necessity for reply to Office action as specified in §§ 1.111, 1.135. (35 U.S.C. 132)

37 CFR §1.2 Business to be transacted in writing.

All business with the Patent or Trademark Office should be transacted in writing. The personal attendance of applicants or their attorneys or agents at the Patent and Trademark Office is unnecessary. The action of the Patent and Trademark Office will be based exclusively on the written record in the Office. No attention will be paid to any alleged oral promise, stipulation, or understanding in relation to which there is disagreement or doubt.

The action of the Patent and Trademark Office cannot be based exclusively on the written record in the Office if that record is itself incomplete through the failure to record the substance of interviews.

It is the responsibility of the applicant or the attorney or agent to make the substance of an interview of record in the application file, unless the examiner indicates he or she will do so. It is the examiners responsibility to see that such a record is made and to correct material inaccuracies which bear directly on the question of patentability.

Examiners must complete an Interview Summary Form for each interview held where a matter of substance has been discussed during the interview by checking the appropriate boxes and filling in the blanks. Discussions regarding only procedural matters, directed solely to restriction requirements for which interview recordation is otherwise provided for in Section 812.01 of the Manual of Patent Examining Procedure, or pointing out typographical errors or unreadable script in Office actions or the like, are excluded from the interview recordation procedures below. Where the substance of an interview is completely recorded in an Examiners Amendment, no separate Interview Summary Record is required.

The Interview Summary Form shall be given an appropriate Paper No., placed in the right hand portion of the file, and listed on the "Contents" section of the file wrapper. In a personal interview, a duplicate of the Form is given to the applicant (or attorney or agent) at the conclusion of the interview. In the case of a telephone or video-conference interview, the copy is mailed to the applicants correspondence address either with or prior to the next official communication. If additional correspondence from the examiner is not likely before an allowance or if other circumstances dictate, the Form should be mailed promptly after the interview rather than with the next official communication.

The Form provides for recordation of the following information:

- Application Number (Series Code and Serial Number)
- Name of applicant
- Name of examiner
- Date of interview
- Type of interview (telephonic, video-conference, or personal)
- Name of participant(s) (applicant, attorney or agent, examiner, other PTO personnel, etc.)
- An indication whether or not an exhibit was shown or a demonstration conducted
- An identification of the specific prior art discussed
- An indication whether an agreement was reached and if so, a description of the general nature of the agreement (may be by attachment of a copy of amendments or claims agreed as being allowable). Note: Agreement as to allowability is tentative and does not restrict further action by the examiner to the contrary.
- The signature of the examiner who conducted the interview (if Form is not an attachment to a signed Office action)

It is desirable that the examiner orally remind the applicant of his or her obligation to record the substance of the interview of each case. It should be noted, however, that the Interview Summary Form will not normally be considered a complete and proper recordation of the interview unless it includes, or is supplemented by the applicant or the examiner to include, all of the applicable items required below concerning the substance of the interview.

A complete and proper recordation of the substance of any interview should include at least the following applicable items:

- 1) A brief description of the nature of any exhibit shown or any demonstration conducted,-
- 2) an identification of the claims discussed,
- 3) an identification of the specific prior art discussed,
- 4) an identification of the principal proposed amendments of a substantive nature discussed, unless these are already described on the Interview Summary Form completed by the Examiner,
- 5) a brief identification of the general thrust of the principal arguments presented to the examiner,
(The identification of arguments need not be lengthy or elaborate. A verbatim or highly detailed description of the arguments is not required. The identification of the arguments is sufficient if the general nature or thrust of the principal arguments made to the examiner can be understood in the context of the application file. Of course, the applicant may desire to emphasize and fully describe those arguments which he or she feels were or might be persuasive to the examiner.)
- 6) a general indication of any other pertinent matters discussed, and
- 7) if appropriate, the general results or outcome of the interview unless already described in the Interview Summary Form completed by the examiner.

Examiners are expected to carefully review the applicants record of the substance of an interview. If the record is not complete and accurate, the examiner will give the applicant an extendable one month time period to correct the record.

Examiner to Check for Accuracy

If the claims are allowable for other reasons of record, the examiner should send a letter setting forth the examiners version of the statement attributed to him or her. If the record is complete and accurate, the examiner should place the indication, Interview Record OK on the paper recording the substance of the interview along with the date and the examiners initials.

Commissioner for Patents

Notice of Non-Compliant Amendment (37 CFR 1.121)	Application No. 12/316,699	Applicant(s) GUYMON ET AL.
---	--------------------------------------	--------------------------------------

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

The amendment document filed on 06 November, 2018 is considered non-compliant because it has failed to meet the requirements of 37 CFR 1.121 or 1.4. In order for the amendment document to be compliant, correction of the following item(s) is required.

THE FOLLOWING MARKED (X) ITEM(S) CAUSE THE AMENDMENT DOCUMENT TO BE NON-COMPLIANT:

- 1. Amendments to the specification:
 - A. Amended paragraph(s) do not include markings.
 - B. New paragraph(s) should not be underlined.
 - C. Other _____.
- 2. Abstract:
 - A. Not presented on a separate sheet. 37 CFR 1.72.
 - B. Other _____.
- 3. Amendments to the drawings:
 - A. The drawings are not properly identified in the top margin as "Replacement Sheet," "New Sheet," or "Annotated Sheet" as required by 37 CFR 1.121(d).
 - B. The practice of submitting proposed drawing correction has been eliminated. Replacement drawings showing amended figures, without markings, in compliance with 37 CFR 1.84 are required.
 - C. Other _____.
- 4. Amendments to the claims:
 - A. A complete listing of all of the claims is not present.
 - B. The listing of claims does not include the text of all pending claims (including withdrawn claims)
 - C. Each claim has not been provided with the proper status identifier, and as such, the individual status of each claim cannot be identified. Note: the status of every claim must be indicated after its claim number by using one of the following status identifiers: (Original), (Currently amended), (Canceled), (Previously presented), (New), (Not entered), (Withdrawn) and (Withdrawn-currently amended).
 - D. The claims of this amendment paper have not been presented in ascending numerical order.
 - E. Other: _____.
- 5. Other (e.g., the amendment is unsigned or not signed in accordance with 37 CFR 1.4): For further explanation of the amendment format required by 37 CFR 1.121, see MPEP § 714.

TIME PERIODS FOR FILING A REPLY TO THIS NOTICE:

1. Applicant is given **no new time period if the non-compliant amendment is an** after-final amendment or an amendment filed after allowance, or a drawing submission (only) If applicant wishes to resubmit the non-compliant after-final amendment with corrections, the **entire corrected amendment** must be resubmitted.
2. Applicant is given **two months** from the mail date of this notice to supply the correction, if the non-compliant amendment is one of the following: a preliminary amendment, a non-final amendment (including a submission for a request for continued examination (RCE) under 37 CFR 1.114), a supplemental amendment filed within a suspension period under 37 CFR 1.103(a) or (c), and an amendment filed in response to a Quayle action. If any of above boxes 1 to 4 are checked, the correction required is only the corrected section of the non-compliant amendment in compliance with 37 CFR 1.121.

Extensions of time are available under 37 CFR 1.136(a) only if the non-compliant amendment is a non-final amendment or an amendment filed in response to a *Quayle* action.

Failure to timely respond to this notice will result in:

Abandonment of the application if the non-compliant amendment is a non-final amendment or an amendment filed in response to a *Quayle* action; or

Non-entry of the amendment if the non-compliant amendment is a preliminary amendment or supplemental amendment.

Application Filed: December 15, 2008
Applicant: John Lewis Guymon Jr
Application Title: Securable Independent Electronic Document
Examiner/GAU: Kavch Abrishamkar

Amendments w/Reply in re Office Action of August 6, 2018

November 6, 2018

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir/ Madam:

In response to the Office Action dated (mailed) August 6, 2018, Applicant hereby amends the Application of Patent, #12/316699, filed December 15, 2008 and remarks as follows:

SPECIFICATION:

Specification not changed.

CLAIMS:

Amended, printed and incorporated as separate document.

DRAWINGS:

Drawings not changed.

REMARKS:

In regard to '*Claim Objections*':

Applicant has removed the few remaining instances where the language "can be" was used correcting the said instances accordingly narrowing the scope of the claims describing the invention more appropriately.

a1675b42-44ed-4577-b10d-6e7102626880

Securable Independent Electronic Document
Guymon, et al

Serial No.: 12/316,699 Amendment
Page 2 of 3

In regard to '*Claim Rejections - 35 U.S.C. 101*':

The statute 35 U.S.C. 101 references process, machine, manufacture and composition of matter or the improvement thereof. In support of 35 U.S.C 101, the electronic document described in the specification is:

- 1) Built and assembled in a user defined specific fashion ('process');
- 2) An electronic apparatus with definite function performing a particular task ('machine');
- 3) Made, produced, built, constructed or fabricated ('manufacture');
- 4) A tangibly embodied form of electronic substance stored on a computer medium ('composition of "electronic" matter').

Therefore, the electronic document described in the specification and claims supports, adheres to and is in the confines of 35 U.S.C 101.

The electronic document described in the specification and claims is similar but superior to specification referenced prior art including the widely used and well known Portable Document Format ('PDF') document by Adobe, Inc. that is not considered to be that of a 'data structure' format.

The electronic document described in the specification and claims is a combination of conventional elements in a conventional manner that includes functionality and other tangible digital type items.

The electronic document described in the specification and claims is not a data structure in itself as it incorporates a multiple count of unique and original user specified and defined data structures and/or elements as well as functionality to which those data structures and/or elements and operations of said data and/or elements are used, maintained or otherwise manipulated.

Securable Independent Electronic Document
Guymon, et al

Serial No.: 12/316,699 Amendment
Page 3 of 3

CONCLUSION:

For all the above reasons, Applicant submits that the claims are now in proper form and define patentably over the prior art. Therefore Applicant submits that this application is now in condition for allowance which Applicant respectfully solicits.

Very respectfully,

/JohnLewisGuymonJr/

John Lewis Guymon Jr
Applicant, Pro Se

CLAIMS as amended

1. An electronic document for secured information exchange supporting independence of specific platform and of nonessential party, tangibly embodied in a computer readable storage medium, the securable independent electronic document comprising:

a normative standard graphical image based container adapted for sectional components, the graphic image sectional component container comprising:

one or more graphical image sectional components adapted for storing graphical image data of said graphical image container type,

wherein said graphical image components may include encrypted content wherein said encrypted content has the ability to be decrypted,

wherein with a set of machine readable instructions in a computer system wherein said graphical image components are processed in an automated fashion by said computer system, and

wherein with visual perception by a human user wherein said graphical image components are interacted upon and processed in a manual fashion by said user; and

one or more character text sectional components adapted for storing normative standard character text based formatted data,

wherein said character text components may include encrypted content wherein said encrypted content has the ability to be decrypted,

wherein with a set of machine readable instructions in a computer system said character text components are processed in an automated fashion by said computer system, and

wherein with visual perception by a human user said character text components are interacted upon and processed in a manual fashion by said user;

and, if user specified, additional sectional components

wherein said additional components adapted for the storage of any of the following data types:

character text data said character text comprising scripting text, rich text, markup language text, or other character text

wherein said character text can include one or more of the following:

a character text Uniform Resource Locator (URL),
encoded data

wherein said encoded data comprising encrypted or embedded data of any type including that of the inscribed herein securable independent electronic document type,

graphic image data,
raw binary data,
intrinsic security feature data,
container based binary encoded digital signature data,
any other user specified data;

wherein said additional sectional components include intrinsic security feature data wherein coupling of said additional sectional component's security feature data generates additional intrinsic security feature data

wherein said intrinsic data or said additional intrinsic data is stored in any one of said sectional components or said additional sectional components,

wherein automated system interfacing as binary file formatted type data in a direct, non-altered, single byte precision original 'incrementally-filed' data handling and storage method, whereby having said character text sectional component encapsulated in said binary document container allows said character text to sustain its original sequential filed data form, and

wherein independent creation and processing of said container from said sectional component's creation and processing, and

wherein integrity enhanced non-associated creation and processing intervention from said sectional component's creation and processing, and

wherein integrity enhanced incorporated security feature information coupling of said sectional components' security check information with other said sectional component's security check information, and

wherein said normative standard graphic image container and said normative standard character text sectional components further allows the electronic document

integrity enhanced intervention and association control of processing and storage from non-desired additional parties,

- independent interaction of processing and storage from non-desired additional parties,
- independent validation of processing and storage from non-desired additional parties, and
- independent processing of and storage in said machine readable instruction's computing platform.
2. The electronic document of claim 1, wherein said normative standard character text based digital signature sectional components include signatures of one or more of the following types:
 - (i) signature;
 - (ii) co-signature;
 - (iii) counter-signature.
 3. The electronic document of claim 2, wherein said document container further comprises additional user specified binary encoded digital signature sectional components, wherein said binary encoded container based digital signature sectional components include signatures of one or more of the following types:
 - (i) signature;
 - (ii) co-signature;
 - (iii) counter-signature.
 4. The electronic document of claim 3, wherein said sectional components include at least one cyclic redundancy check (CRC) value.

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 12/316,699	Applicant(s) Guymon et al.	
	Examiner KAVEH ABRISHAMKAR	Art Unit 2494	AIA Status No

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTHS FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 29 August 2017.
 - A declaration(s)/affidavit(s) under **37 CFR 1.130(b)** was/were filed on _____.
- 2a) This action is **FINAL**. 2b) This action is non-final.
- 3) An election was made by the applicant in response to a restriction requirement set forth during the interview on _____; the restriction requirement and election have been incorporated into this action.
- 4) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims*

- 5) Claim(s) 1-4 is/are pending in the application.
 - 5a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 6) Claim(s) _____ is/are allowed.
- 7) Claim(s) 1-4 is/are rejected.
- 8) Claim(s) _____ is/are objected to.
- 9) Claim(s) _____ are subject to restriction and/or election requirement

* If any claims have been determined allowable, you may be eligible to benefit from the **Patent Prosecution Highway** program at a participating intellectual property office for the corresponding application. For more information, please see http://www.uspto.gov/patents/init_events/pph/index.jsp or send an inquiry to PPHfeedback@uspto.gov.

Application Papers

- 10) The specification is objected to by the Examiner.
- 11) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

Priority under 35 U.S.C. § 119

DETAILED ACTION

Notice of Pre-AIA or AIA Status

The present application is being examined under the pre-AIA first to invent provisions.

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on August 29, 2017 has been entered.

1. Claims 1-4 are currently pending consideration.

Response to Arguments

Applicant should submit an argument under the heading "Remarks" pointing out disagreements with the examiner's contentions. Applicant must also discuss the references applied against the claims, explaining how the claims avoid the references or distinguish from them.

The claims no longer contain the clause "means for" so the claims are no longer being interpreted under 112 6th paragraph.

Claim Objections

Claims 1-4 objected to because of the following informalities: The Applicant employs the language "can be" in multiple instances. For example, in claim 1, the claims states that the container can be of normative standard format. The Examiner notes that this language can be construed as the container is capable of being of a normative standard. Further instances include, wherein the character

text data can be of an encoded type, wherein the text data can be processed in an automated fashion, and wherein the graphical image data can be of an encrypted type. There are further instances which do not limit the particular limitations but just require that an element is capable of performing a certain function. The amendment has removed some instances of the "can be" language but not all of them. Appropriate correction is recommended.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-4 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The claim(s) does/do not fall within at least one of the four categories of patent eligible subject matter because the claims are directed towards an electronic document which is a data structure which is not a machine, process, composition of matter or an article of manufacture. Data structures are not patent-eligible (see *Digitech Image Techs., LLC v. Elecs. For Imaging, Inc.* (Fed. Cir. July 11, 2014)).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to KAVEH ABRISHAMKAR whose telephone number is (571)272-3786. The examiner can normally be reached on M-F 9-5:30.

Examiner interviews are available via telephone, in-person, and video conferencing using a USPTO supplied web-based collaboration tool. To schedule an interview, applicant is encouraged to use the USPTO Automated Interview Request (AIR) at <http://www.uspto.gov/interviewpractice>.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jung Kim can be reached on 571-272-3804. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

Securable Independent Electronic Document

Serial #12/316,699 - December 15, 2008

Mail Stop:
Office Of The Under Secretary And Director
c/o Andrei Iancu
P. O. Box 1450
Alexandria, VA 22313-1450

July 24, 2018

Dear Under Secretary and Director Andrei Iancu, Sirs or Madams:

Now, with respect and appreciation, comes John Lewis Guymon Jr., Applicant, petitioning the United States Patent And Trademark Office, under 37 C.F.R. §1.181, Petition To The Under Secretary of Commerce for Intellectual Property and Director of the United States Patent and Trademark Office ("Director"), for review by the Director of this application's recent office decision dated May 24, 2018 et alia.

This renewed petition is the second request from Applicant for The Director's involvement. Applicant, with due diligence and proper candor, petitions the office within the two (2) month reply period and requests clarification correction and properness of application file as well as reconsideration of various petitions, certifications and office actions.

Applicant requests review, correction and reconsideration of the office's petition decision dated May 24, 2018 for the inscribed application serial 12/316,699. **Most important is the need for clarification and properness of the application's status and required steps or procedures needed for further application prosecution.**

Multiple discrepancies among the office's various data systems, specifically those of the Public Application Information Retrieval 'PAIR' and Patent Examination Data 'PED' systems, show multiple contradicting values of the application status and confuse the Applicants. Further, variations in the various system's filed documents and further mislead Applicants. With the only reference to the file's actual operation and current status that of the PAIR system as no correspondence has been received from the office, Applicant's respectfully request understanding and correction of the application's status and file contents.

Applicants specifically requests, with respect, the office inform the Applicant's on the current status of this application and the procedures, steps or next item or items needed to further prosecution of this application. Details of the application's status and content variances are supplied below and are from data directly supplied from the office's PAIR, PAIR bulk and PED bulk systems.

The fact that the application can be in three (3) different status states is **inconceivable** and must be addressed. Currently in PAIR the application has a status value of thirty (30) - '**Docketed New Case - Ready for Examination**' whereas the PAIR bulk system has the status of one hundred sixty one (161) - '**Abandoned -- Failure to Respond to an Office Action**' and the PED bulk system has the status as eighty three (83) - '**Advisory Action Mailed**'. The status state codes are defined in the CSV data file located at the following URL:

https://bulkdata.uspto.gov/data/patent/pair/economics/2016/status_codes.csv.zip

The office states the decision on May 24, 2018 is a corrected decision of those dated October 31, 2017 and February 7, 2018. In respect to the office's decision dated June 29, 2017 Applicant still maintains, states and believes that the Petition for Extension of Time was paid in the proper amount and was filed within proper time considerations, and therefore respectfully reiterates the belief that the extension of time petition and related petition to waive the rules 37 CFR 1.183 for the requirement of all joint inventors signature were proper and within laws rules and the guidelines of the office.

Additionally reconsideration of Applicants Correction of Inventorship under 37 CFR 1.48 and Request for Refund 37 was requested in previous petitions. Further the petitions should have and should be considered by a different office than the Office of Petitions. Further, the submission of the extraordinary circumstances in the petition which the office has filed incorrectly under Applicant's Request for Refund petition dated August 24, 2015 and should be corrected in it's filing. The office has been asked multiple times to take notice and correct the improper petition filings and

has not addressed the matter. It would be appreciated if the office would take note of the mis-filed petitions and present reasons or other information as to why previous requests for attention and change.

This renewed reconsideration request is presented to the office to ensure the confirmation of the intention's and beliefs to be that of which all documents and supporting evidence has been supplied to the office correctly with the utmost honest and respect accordingly and politely demand the office take note and have receipt of the reservation of all rights in the furthering of the handling and resolution of all documents and or other correspondence.

In regard to the multiple status states the following documented items are presented. These items were all obtained from the office's various systems within a five minute period of time to ensure a tight window that would prevent discrepancy possibilities in database updates or maintenance. Further supplied are the data item signatures from the URL's the data was acquired from.

Application No. 12/316,699
Filed: 12/15/2008
For: SECURABLE INDEPENDENT
ELECTRONIC DOCUMENT

:
:
: DECISION ON PETITION
:
:
:

This is a corrected decision¹ on the petitions filed **August 29, 2017** and are being treated as (1) a petition under 37 CFR 1.183 to waive rules and accept papers which are not signed by all inventors and (2) a petition to revive the above-identified application under 37 CFR 1.137(a).²

The petition filed August 29, 2017 under 37 CFR 1.183 is DISMISSED.

The petition filed August 29, 2017 under 37 CFR 1.137 is GRANTED.

The petition filed April 9, 2018 is DISMISSED.³

Request to Waive the Rules under 37 CFR 1.183

The petition again requests waiver under 37 CFR 1.183 of the requirement that amendments and other papers be signed by both inventors. This petition, signed only by inventor Mr. Guymon, indicates that Mr. Guymon believes his contribution to the inventorship of the application was greater than that of inventor Mr. Litsey, and that it has been difficult for him to obtain the signature of Mr. Litsey.

The paper on which this petition is filed is not signed by all of the applicants. Pursuant to 37 CFR 1.33(b), amendments and other papers filed in the application must be signed

¹ This decision replaces the petition decisions issued on October 31, 2017 and February 7, 2018.

² The papers received on January 2, 2018, January 3, 2018, and April 9, 2018 do not have signatures from both parties named as inventors in the instant application. As the paperwork is not properly signed, it will not be considered. **Moving forward, as set forth in 37 CFR 1.33(b) and 37 CFR 1.42(a), all submissions must be properly signed by all interested parties to be considered.**

³ The petition filed April 9, 2018 does not have signatures from both parties as inventors in the instant application. As the paperwork is not properly signed, it will not be considered and is dismissed.

Art Unit: OPET

by all of the joint inventors (applicants), a registered patent practitioner, or an assignee as provided for under 37 CFR 3.71(b).

With regard to the petition to waive the rules, 37 CFR 1.183 states

In an extraordinary situation, when justice requires, any requirement of the regulations in this part which is not a requirement of the statutes may be suspended or waived by the Director or the Director's designee, *sua sponte*, or on petition of the interested party, subject to such other requirements as may be imposed. Any petition under this section must be accompanied by the petition fee set forth in § 1.17(f).

Petitioner's argument has been considered, but is not persuasive. While petitioner has not requested reconsideration of the request under 37 CFR 1.48, petitioner Guymon appears to still argue that there is a dispute as to the ownership. In this regard, 37 CFR 1.183 permits the Director to waive a rule when extraordinary circumstances exist and justice requires waiver of the rule. Applicant has not shown the existence of extraordinary circumstances, however, where justice requires waiver of the rule requiring all inventors or their representatives sign amendments or other papers. Where, as here and as stated previously, the question of inventorship between the diverse parties is vigorously contested, the USPTO will not relax the requirement of 37 CFR 1.48 by way of 37 CFR 1.183.⁴ As petitioners have not adequately shown that either an extraordinary situation is herein present or that "justice requires" waiver, the petition for waiver is dismissed.

It would be contrary to the intent of the regulations to permit, *ex parte*, by waiver of the rules, Petitioner to unilaterally extinguish the property rights that Mr. Litsey has in this application. Mr. Litsey, as a joint inventor, has a property right in this application that can be canceled, revoked, or annulled **only** by proceedings that afford due process of law.^{5, 6} An *ex parte* proceeding in the USPTO is not the appropriate forum for the contested extinction of a property right in an application. That is especially so in, as here, the presence of the statute and express objection of the party whose interest(s) is being extinguished.⁷ It is well settled that the Office is not the appropriate forum for resolving a dispute concerning the ownership of an application, and, as such, the USPTO will not permit itself to become embroiled in ownership disputes.⁸ Likewise, permitting the acceptance of amendments or other papers signed only by Mr. Guymon, without Mr. Litsey's assent, would prejudice Mr. Litsey's property rights in the

⁴ See *In re Cooper*, 230 USPQ 638, 639 (Comm'r Pat. 1985).

⁵ *Iowa State Univ. Research Found. v. Sperry Rand Corp.*, 444 F.2d 406, 410, 170 USPQ 374, 377 (4th Cir. 1971).

⁶ See *Baker Hughes, Inc. v. Kirk*, 921 F.Supp. 801 (D.D.C. 1995).

⁷ *Id.*; *In re Hardee*, 223 USPQ 1122 (Comm'r Pat. 1984).

⁸ See *Ex parte Harrison*, 1925 Dec. Comm'r Pat. 122, 123 (Comm'r Pat. 1924); *In re Moeller*, 1904 Dec. Comm'r Pat. 70, 71 (Comm'r Pat. 1904); *Ex parte McTammany*, 1900 Dec. Comm'r Pat. 168, 181 (Comm'r Pat. 1900); *Ex parte McFarlane*, 1896 Dec. Comm'r Pat. 37, 38 (Comm'r Pat. 1896); *Ex parte Gallatin*, 1892 Dec. Comm'r Pat. 106 (Comm'r Pat. 1892).

Art Unit: OPET

application. Lastly, in circumstances as herein, the USPTO seeks to preserve the rights of all parties to the extent it is able.

Additionally, with regard to the difficulties described in having both inventors sign papers filed in the Office, 37 CFR 1.32(c)(1) as applicable to applications for patent filed before September 16, 2012 states that a power of attorney may name one or more joint inventors as representative. As such, the joint inventors may agree to give power of attorney to one or more joint inventors. Mr. Guymon and Mr. Litsey may therefore **agree jointly** to appoint Mr. Guymon a power of attorney. See also MPEP 402.02(b).

Accordingly, the petition to waive the rules under 37 CFR 1.183 is **DISMISSED**.

Request for Revival under 37 CFR 1.137(a)

Petitioner failed to timely and properly respond to the final Office action mailed on April 2, 2013, which set a three (3) month shortened statutory period for reply.

On October 2, 2013, an amendment after final rejection as filed, accompanied by a request for a three (3) month extension of time in accordance with 37 CFR 1.136(a) and payment of the fee in the micro entity amount. However, the Certification of Micro Entity Status filed on October 2, 2013 was signed by only one of the joint inventors and was therefore not effective. Therefore, the extension of time payment of \$350 filed October 2, 2013 was only sufficient for a two (2)-month extension of time at the small entity amount, and was treated as a request for a two (2)-month extension of time.

On October 18, 2013, an Advisory Action Before the Filing of an Appeal Brief was mailed, stating that the reply filed October 2, 2013, fails to place the application in condition for allowance. As such, the reply filed October 2, 2013 was both an untimely and an improper reply to the final Office action mailed April 2, 2013.

A Notice of Abandonment was mailed on February 7, 2014.

On April 7, 2014, a paper styled as a petition to revive the application was filed, accompanied by a Request for Continued Examination and payment of the RCE fee in the micro entity amount. On April 30, 2014, the petition was dismissed.

On February 6, 2016, a renewed petition to revive the application was filed. On March 7, 2016, the renewed petition was dismissed.

On August 8, 2016, a renewed petition to revive the application was filed, but was not accompanied by the appropriate extension of time fee. On June 29, 2017, a decision was mailed indicating the required extension of time fee had not been submitted.

Art Unit: OPET

On August 29, 2017, petitioner filed the instant petition under 37 CFR 1.137(a) to revive the instant application. The August 29, 2017 petition under 37 CFR 1.137(a) was properly signed by both inventors, Mr. Guymon and Mr. Litsey.

37 CFR 1.137(a) provides that

A grantable petition pursuant to this section must be accompanied by:

- (1) The reply required to the outstanding Office action or notice, unless previously filed;
- (2) The petition fee as set forth in § 1.17(m);
- (3) Any terminal disclaimer (and fee as set forth in § 1.20(d)) required pursuant to paragraph (d) of this section; and
- (4) A statement that the entire delay in filing the required reply from the due date for the reply until the filing of a grantable petition pursuant to this section was unintentional. The Director may require additional information where there is a question whether the delay was unintentional.

The Request for Continued Examination filed on August 29, 2017, which has been signed by both inventors, serves as a proper reply under 37 CFR 1.137(b)(1).⁹

Petitioners' August 8, 2016 petition to revive the application did not include the appropriate extension of time fees set forth for a three (3) month extension of time as a small entity. While the August 29, 2017 petition requests treatment as a renewed petition, it is being treated as a new petition, requiring a petition fee as set forth in 37 CFR 1.17(m). In view of the specific facts and circumstances of this case, the Office is waiving, pursuant to 35 U.S.C. § 41(a)(7), the petition fee as set forth in 37 CFR 1.17(m) in the micro entity amount, or \$500. Therefore, there is no fee due for the petition to revive.

Petitioners' request for revival under 37 CFR 1.137(a) provides a statement that the entire delay in filing the required reply from the due date for the reply until the filing of a grantable petition pursuant to this section was unintentional.

Accordingly, the petition to revive under 37 CFR 1.137(a) is **GRANTED**.

This petition is being referred to Technology Center 2400 for further processing in accordance with this decision.

Further correspondence with respect to these matters should be addressed as follows:

⁹ On April 7, 2014, a RCE was filed; however, it was not properly signed. The RCE fee paid under 37 CFR 1.17(e)(1) satisfied the requirements set forth for the micro entity fee. It is acknowledged that a Certification of Micro Entity Status was received on August 29, 2017 and has been properly signed by both inventors. As such, the fee set forth under 37 CFR 1.17(e)(1), which was paid on April 7, 2014, satisfies the fee requirement for the RCE filed on August 29, 2017.

~ HISTORY ~

October 2, 2013: Applicant Response

Applicant answered with a reply, noting request for assistance. Applicant understood claims could be helped, yet was unsuccessful in getting any help after talking multiple times with examiner. Applicant amended set of claims to include new claims, which resulted in an improper submission. A three month extension was accepted as Micro Entity.

October 18, 2013: Advisor Action

Claim set amendment did not bring Application into order.

February 7, 2014: Notice of Abandonment

Application abandoned and notice of abandonment mailed

April 7, 2014: Petition for Revival and RCE

Revival and RCE, filing as Micro Entity raised no issued. The total amount of \$335 was paid, having \$300 for RCE and \$35 for the revival. The required fee was unknown, yet the documents needed to be filed with anticipation of a fee correction.

April 30, 2014: Decision

Decision received indicating that another signature was required. Also the 35 fee was for sure not enough. The RCE and its fee were accepted. No issues of Micro Entity were mentioned. I contacted Mr. Wood on several occasions to understand this decision. He informed me that I need to correct the inventorship of the application or have both inventors' signatures.

August 24, 2015: Petition for Correction of Inventorship and Refund.

The two petitions had a cover letter and should have been handled by a different department but instead the two petitions and cover letter was filed as a 105 page Request for Refund. It wasn't until March 4, 2016 that the 'Inventorship petition was filed and done so as only a 5 page letter of cover. Correction Of Inventorship paperwork was improperly filed as a Refund petition and was improperly stamped 'Received' by the Office Of Petitions.

February 2, 2016: Petition for Revival.

Fees paid of \$965 micro entity. \$850 for revival of application. \$150 for Correction because refund of RCE fees wasn't processed.

February 6, 2016: Transaction Event Code

A transaction event code of 'BCPA' was wrongly entered into the file. This code, used in the past to signify a Continued Prosecution Application event, was once used for MPEP 201.06(D). The workflow creates open incomplete situation. No CPA at all should be in file, as the practice ended around July, 2001. This event code has suspicious resurfaced as of 2013, and manipulate file content.

March 7, 2016: Decision on Revival of Application, Correction of Inventorship and refund.

The reason or dismissal was again the lack of signatures from both inventors. The Correction of Inventorship, dismissed because of missing signatures of the actual individual involved in the

~ 4 ~

Serial #12/316,699

correction of inventorship. Mr. Wood offered no solution and expressed the absolute need of Mr. Litsey's signature. The petition was signed by Applicant only because joint Applicant Litsey refused to sign the correction. Applicant also believed he had the authority to submit the documents accordingly as it was in the best interest for joint inventors.

August 8, 2016: Petition for Suspension of Rules and Extension of Time

The suspension of rules should have been reviewed by the Director, however, it was decided upon by Mr. Wood. The petition was dismissed. This is the extension of time petition that is in question with regards to Micro Entity and fee payments.

June 29, 2017: Decision

August 29, 2017: Petition to the Director
Petition to the Director was unsuccessful.

October 31, 2017: Decision

January 2, 2018: 2nd Petition to the Director
2nd Petition to the Director was also unsuccessful

~ ISSUES AT HAND ~

Applications can be helped or hindered at the discretion of the office that presents an unfair and unjust environment of all applicants. Specifically, this application is unjustly handled by the Office in many different ways, including the following.

Event codes are used in the application file that are non-standard and of a custom purpose facilitating examiner, advisor or other users of interest. The various environments available for viewing an application's contents display the transaction events differently allowing an application to contain items or operations such as that would be deemed improper or invalid or of unjust operation.

Transactions are omitted, not shown or displayed differently in the various data retrieval or viewing environments available for reasons for the application's contents. The different environments for the Application's file content display windows pair, glossier as well as XML and public released applications show or hide different items. Events show to be valid when shown in the PAIR IFW but are actually of an event code different than the standard code used for such event.

Transactions can be entered with codes different than standard therefore altering the action done or department used in its handling.

Decisions of the 'OPPT' type are composed with errors, graphical alterations, unofficial signatures and other mishaps. These petitions are generated to remove the Office's judicial liability and evidential weight or value allowing fortunate recipients to avoid responsibility, or prevent unfortunate recipient's ability for action or prosecution advancement.

**Securable Independent Electronic Document**

Serial #12/316,699 - December 15, 2008

**MAIL STOP**

**OFFICE OF THE UNDER SECRETARY AND DIRECTOR ANDREI IANCU**

**P.O. Box 1450**

**Alexandria, VA 22313-1450**

April 9, 2018

Dear Under Secretary and Director Andrei Iancu, Sirs or Madams:

Now, with respect and appreciation, comes John Lewis Guymon Jr., Applicant, petitioning the United States Patent And Trademark Office, under 37 C.F.R. §1.181, Petition To The Under Secretary of Commerce for Intellectual Property and Director of the United States Patent and Trademark Office ("Director"), for review by the Director of this application's various petition decisions dated February 7, 2018, Oct 31, 2017.

...

This renewed petition is the second request from Applicant for The Director's involvement. Applicant, with due diligence and proper candor, petitions the office within the two (2) month reply period per 35 U.S.C. §21(b) and requests reconsideration of various petitions, certifications and office actions.

**1.181 Petition To Director Andrei Iancu**Securable Independent Electronic Document  
Serial #12/316,699

Applicant believes he has presented material properly with good merit and just cause to fulfill the requirements of the current petitions and their relief asked for, but has been prevented from the relief requested by employees of the United States Patent and Trademark Office (USPTO). Applicant has no other recourse with the prosecution process of this application, but to have constant focus on a review from the Director.

~ FOUNDATION ~

**Applicant As Representative**

Applicant, with knowledge and supporting evidence, confirms his ownership of and authority for this application and decisions made therefore. Additionally, Applicant as the sole owner and qualified officer of iBailBonding.Com, is responsible for all correspondence to date.

Applicant, with all documents, with due diligence as he believes to be true and proper, has wholeheartedly commenced the various actions to date in regards to this application's prosecution.

Applicant, unbiased and with fairness, has acted with respect and good candor in a representative position while commencing his work with the USPTO, and does so in full support and honor of joint applicant Douglas Litsey during his time of chosen absence.

**Fees**

Applicant has paid all fees and submitted all correspondence by himself, and should qualify to serve as an official. Certain fees in regard to an extension of time are of key issue. Having the extension of time petition supporting the Application's revival, if past fee payments are considered proper and to guidelines, puts the application back on track.

**Micro Entity**

Applicant filed a Certification of Micro Entity soon after it became available on October 02, 2013, under oath, and has understood and believed to be true that the Application was of Micro Entity Status with the multiple correspondence items and/or fees specifying Micro Entity submitted by Applicant and further received by the Office without objection. Further, as 37 CFR 1.29(g) indicates that Micro Entity status needs only be filed once in an application. Applicant was under the impression the application was that of Micro Entity and would remain as such, having Applicant make mention of with each fee amount submission made to the Office.

37 CFR 1.29(g) reads:

(g) A certification of entitlement to micro entity status need only be filed once in an application or patent

Mr. Wood himself has exchanged several items of correspondence without issue before raising objection in recent decisions. Applicant believes that when the transaction event code 'BCPA' was

Application No. 12/316,699, transaction entry #70

~ 2 ~

1.181 Petition To Director Andrei Iancu

Securable Independent Electronic Document  
Serial #12/316,699

12316699,BCPA,2016-02-06,70, Workflow - Request for CPA - Begin

entered into the file on February 2, 2016; a transaction Applicant did not petition for, suggest, hint to or otherwise make indication of, yet the application's Entity type was changed. As stated in 37 CFR 1.29(e), the refiling of an application requires a new certification to be filed.

37 CFR 1.29(e) reads, in part, as:

"... The refiling of an application under § 1.53 as a continuation, divisional, or continuation-in-part application (including a continued prosecution application under § 1.53(d) ), or the filing of a reissue application, requires a new certification of entitlement to micro entity status for the continuing or reissue application."

Applicant has paid the RCE fee as Micro Entity in the amount of \$300 on April 7, 2014 that Mr. Wood has acknowledged in his latest decision February 2, 2018 that can be applied to and used for payment of the RCE Micro Entity fee amount. This fee, previously paid, could have been used for the fee discrepancy amounts Mr. Wood indicated needed to be paid, if indeed Micro Entity was not established.

With Mr. Wood's decisions based on the application's entity status and the required fee amounts thereof, Applicant respectfully asks the Director to consider Applicant's due diligence and proper candor in the determination of Applicant true belief and intentions and proper procedure in his determination and payment of fees based on the Micro Entity status.

#### **Decisions - Douglas I. Wood**

Decisions by Mr. Wood are with errors and other erroneous content. Further, the decisions do not follow policy and procedure. The decision dated April 2, 2014 appears to be the only valid decision following USPTO policy and procedure, specifically in regard to mail date stamps and signature authorities.

#### **Sensitive Application Warning System - 'SAWS'**

The United States Patent and Trademark Office has recognized their implementation of a program that monitored the activity of a number of filed applications. Applicant has found indications of similar implemented systems or procedures that show signs of this program's continued operation.

Applicant knows that there are improper procedures and other non-standard rules of practice that are currently in place and that have effect on this application. It may be that the complete operation of the Office needs review and change. This should be considered as a return to proper procedure, and would in parallel alleviate this application's problems accordingly. And further, with consideration of the public in general, specifically those adversely affected, changes must be made.

**1.181 Petition To Director Andrei Iancu**Securable Independent Electronic Document  
Serial #12/316,699**~ HISTORY ~****October 2, 2013: Applicant Response**

Applicant answered with a reply, noting request for assistance. Applicant understood claims could be helped, yet was unsuccessful in getting any help after talking multiple times with examiner. Applicant amended set of claims to include new claims, which resulted in an improper submission. A three month extension was accepted as Micro Entity.

**October 18, 2013: Advisor Action**

Claim set amendment did not bring Application into order.

**February 7, 2014: Notice of Abandonment**

Application abandoned and notice of abandonment mailed

**April 7, 2014: Petition for Revival and RCE**

Revival and RCE, filing as Micro Entity raised no issued. The total amount of \$335 was paid, having \$300 for RCE and \$35 for the revival. The required fee was unknown, yet the documents needed to be filed with anticipation of a fee correction.

**April 30, 2014: Decision**

**~ ISSUES AT HAND ~**

Applications can be helped or hindered at the discretion of the office that presents an unfair and unjust environment of all applicants. Specifically, this application is unjustly handled by the Office in many different ways, including the following.

Event codes are used in the application file that are non-standard and of a custom purpose facilitating examiner, advisor or other users of interest. The various environments available for viewing an application's contents display the transaction events differently allowing an application to contain items or operations such as that would be deemed improper or invalid or of unjust operation.

Transactions are omitted, not shown or displayed differently in the various data retrieval or viewing environments available for reasons for the application's contents. The different environments for the Application's file content display windows pair, glossier as well as XML and public released applications show or hide different items. Events show to be valid when shown in the PAIR IFW but are actually of an event code different than the standard code used for such event.

Transactions can be entered with codes different than standard therefore altering the action done or department used in its handling.

Decisions of the 'OPPT' type are composed with errors, graphical alterations, unofficial signatures and other mishaps. These petitions are generated to remove the Office's judicial liability and evidential weight or value allowing fortunate recipients to avoid responsibility, or prevent unfortunate recipient's ability for action or prosecution advancement.

~ 5 ~

**1.181 Petition To Director Andrei Iancu**Securable Independent Electronic Document  
Serial #12/316,699

Workflow processing of correspondence can be dedicated to specific departments or individuals therefore removing involvement by others requested or otherwise dedicated to specific handling. Mailing processes or other post procedure actions can be manipulated in ways that are not officially designated.

**~ ASSISTANCE OR RESOLUTION UNAVAILABLE ~**

Applicant has been unsuccessful in getting help or resolving the different problems at hand. Many requests for assistance have been made with many different departments, positioned officials or other individuals without success. The different departments or individuals include the Office of the Commissioner For Patents, Pro Se Assistance Program, Inventors Assistance Center, Ombudsman Program as well as a multitude of 'SPE' individuals, having all transfer me to different people when confronted with issues that they can't speak of or otherwise offer solution. Eventually I was told to talk to Mr. Wood as he was the only person that can help me.

Applicant believes he has transacted all necessary times in writing to facilitate the showing of the desire and need for this applications growth. Further Applicant has shown due diligence in this application's prosecution as well as the discovery and reporting of the influential attributes there at the USPTO Office. All items and other information presented in writing in support of this application procedure as well as the Offices unfortunate issues currently at hand are stated, sworn to and presented by Applicant in belief they are true and correct to the best of Applicant's knowledge in accordance to and under jurisdiction of 18 U.S.C. 1001, where applicant is fully aware and in complete agreement to said section's punishment of fine or imprisonment or both for any false statement given.

Assistance from the USPTO goes without written documentation and tracking information, not in accordance with 37 CFR 1.2.

**37 CFR 1.2 - Business to be transacted in writing.**

All business with the Patent and Trademark Office should be transacted in writing. The personal attendance of applicants or their attorneys or agents at the Patent and Trademark Office is unnecessary. The action of the Patent and Trademark Office will be based exclusively on the written record in the Office. No attention will be paid to any alleged oral promise, stipulation, or understanding in relation to which there is disagreement or doubt.

During the time this application has been abandoned, Applicant tried his best in all fairness the many different ways he felt possible for the successful revival and continued examination of the inscribed application of patent. With Applicant's non-discounted push for said successful return to operation, Applicant became aware of and implemented therefore many different directions talking with many different individuals including numerous discussions with Douglas Wood. It is with the much applicable workings by applicant that the application is in the best position for continuation, having only the substitute Oath or Declaration by Mr. Litsey needed.

MPEP gives director able to ask of more and to-do this and that to facilitate the completed operation in need, in this case the true and proper designation of the true inventor or joint inventors, those now having proper understanding and awareness of the inventors meaning and the applications stated positioning on such. Multiple requests of Applicant for Mr. Litsey to submit a supplemental oath or

~ 6 ~

**1.181 Petition To Director Andrei Iancu**Securable Independent Electronic Document  
Serial #12/316,699

declaration of invention conception and inventorship were unsuccessful. Applicant asks of the Director to implement his authority to request the needed declarations for substitution of the initial declaration presented during application of said invention patent. Applicant's assistance, requested in the past by joint applicant Litsey for the content determination and document generation, is kindly offered if desired as needed to facilitate this applicant's items missing from file.

Understood oath needed, joint inventor Douglas Litsey needs to present his contribution of conception, if any true and proper; such forthcoming information, specifically the job specifics of the relationship. We both become aware of the requirements needed for the proper indication of inventorship. Our contract entered August 26, 2017, a copy of which was included in the August 28, 2017 petition allotment, allowed this application to continue as we have both desired it to do, giving heed and generic acknowledgement of each of us and our position at hand, a currently listed joint inventor, therefore giving way for the application's revival and continued examination. The agreement and acknowledgement document established simply that if an individual is a contributing inventor having substantiating proof thereof, that person has equal rights to the application and in the proof the simple rule that if contract with it's simple establishment of the compel collected With the contract's simple establishment, the divulgence for proof of the various areas of conception contract, the required verification of said such to get the application's prosecution back up and running knew all along that a new oath was needed.

04/30/2014: The Office further accepted the fees for Applicant's Revival and RCE Petition filed April 7, 2014 amounts based on Micro Entity fees schedule amounts totaling 335, 300 for RCE and 35, an amount in error, for the revival of the application based on unintentional delays, submitted by Applicant in error with for Petition on April 7, 2014, presented for RCE and incorrect revival fee of 35.00, which was the only fee Applicant found to be designated. In the petition decision dated 04/30/2014, Mr. Douglas Wood indicated that the Petition For Revival was not accompanied by payment of the fee in the proper amount.

Documents and fees paid in Micro entity on or before April, 2014, having the application certified as Micro Entity. Previous petitions and their fees were accepted as Micro Entity during earlier times in the application having the entity status changed on or around April, 2014 because of a (Continued Prosecution of Application workflow request filed 02-06-2016. with fees accepted in Fees paid in full for all Applicant's correspondence, as Micro Entity, set before 2013 and allowed as such with the acceptance of said correspondence and fee's in amounts supporting micro entity. The Office has accepted past correspondence and required fee's from Applicant, having all such fees paid to date in excess of the various fee's total amount required.

Applicant submitted a Request For Refund of this excess fee amount along with the fees paid for the RCE petition on With this excess amount paid Further, with this excess paid fee's paid amount total, Applicant had requested a refund totaling amount of the by Applicant, having supporting accordingly. No asking of additional parts to be supplied (lacking thereof) only reconsideration of the referencing petition decision.

Applicant requests that review of this application's file be by the Director and/or his designee and be that of an individual signing the decision as an attorney currently holding a valid license of practice,

**1.181 Petition To Director Andrei Iancu**

In re Application of :  
Guymon et al. :  
Application No. 12/316,699 : DECISION ON PETITION  
Filed: 12/15/2008 :  
For: SECURABLE INDEPENDENT :  
ELECTRONIC DOCUMENT :

This is a decision on the papers filed January 2, 2018, which are treated as a (1) a petition under 37 CFR 1.183 to waive the rules and accept papers which are not signed by all inventors; (2) a renewed petition to revive the above-identified application under 37 CFR 1.137(a), and (3) a petition under 37 CFR 1.181 and 1.136.

The petitions are again **dismissed**. *However, the dismissal is without prejudice, and applicant may request reconsideration of the petition under 37 CFR 1.137(a) upon submission of the proper petition fee.*

Any request for reconsideration of this decision must be submitted within **TWO (2) MONTHS** from the mail date of this decision. Extensions of time under 37 CFR 1.136(a) are permitted. The reconsideration request should include a cover letter entitled "Renewed Petition." This is not a final agency decision.

In response to the decision mailed October 31, 2017, petitioners have filed a request for reconsideration. Petitioners states that reconsideration is requested of petitions under 37 CFR §§ 1.137(a), 1.114, 1.129, 1.48, 1.183, 1.136 and 1.181. Petitions, however, may only be taken under 37 CFR §§ 1.137(a), 1.183, 1.136, and 1.181. The petition will therefore be considered as a renewed petition under those rules.

At the outset, it is noted that the subject petition is not properly signed as it is signed only by inventor Guymon and therefore does not comply with 37 CFR 1.33(b). However, under the circumstances the petition will be answered.

**Petition Under 37 CFR 1.137(a)**

The application became abandoned September 3, 2013, for failure to timely and properly respond to the final Office action mailed April 2, 2013, which set a three (3) month shortened statutory period for reply. On October 2, 2013, an amendment after final rejection was filed, accompanied by a request for a three (3)-month extension of time in accordance with 37 CFR 1.136(a) and payment of the fee in the micro entity amount. However, the Certification of Micro Entity Status filed October 2, 2013 was signed by only one of the joint inventors and was therefore not effective. Therefore, the extension of time fee payment of \$350 filed October 2,

Art Unit: OPET

2013, was only sufficient for a two (2)-month extension of time at the small entity amount, and was treated as a request for a two (2)-month extension of time. On October 18, 2013, an Advisory Action Before the Filing of an Appeal Brief was mailed, stating that the reply filed October 2, 2013, fails to place the application in condition for allowance. As such, the reply filed October 2, 2013 was both an untimely and an improper reply to the final Office action mailed April 2, 2013. A Notice of Abandonment was mailed on February 7, 2014. On April 7, 2014, a paper styled as a petition to revive the application was filed, accompanied by a Request for Continued Examination and payment of the RCE fee in the micro entity amount. On April 30, 2014, the petition was dismissed. On February 6, 2016, a renewed petition was filed. On March 7, 2016, the renewed petition was dismissed. On August 8, 2016, a renewed petition was filed. On June 29, 2017, the petition was dismissed. On August 29, 2017, a renewed petition was filed. On October 31, 2017, the petition was dismissed.

Petitioner asserts that the petition form filed August 29, 2017 is properly signed on behalf of both inventors, and that the Office improperly dismissed the petition as not being properly signed.

Petitioner's argument is correct to the extent indicated. A review of the record reveals that the Form PTO/SB/64 Petition to Revive form filed August 29, 2017 was signed by both inventors. Thus, the petition was properly signed. However, the petition was dismissed as being an untimely renewed petition: A petition to revive with the petition fee was initially filed February 6, 2016. The petition was dismissed by decision mailed March 7, 2016, however, because it was not properly signed and because the RCE was not properly signed, and the RCE fee had not been properly paid in the micro entity amount as a result of the lack of a proper micro entity status certification signed by both inventors. The decision mailed March 7, 2016 stated that applicant was given two months to reply, and that extensions of time in accordance with 37 CFR 1.136(a) were available. On August 8, 2016, a renewed petition was filed, but was not accompanied by the required extension of time fee. On June 29, 2017, a decision was mailed indicating the required extension of time fee had not been submitted. The renewed petition under 37 CFR 1.137(a) submitted August 29, 2017 was properly signed, but was not accompanied by the proper extension of time fee and a properly signed micro entity status certification.

The decision mailed October 31, 2017 stated that petitioner had two (2) months from the date of mailing of the decision to submit proof that the required extension of time fee was timely paid if petitioner feels the dismissal was mailed in error, or alternatively submit a new petition under 37 CFR 1.137(a), accompanied by payment of the petition fee. Petitioner, however, neither submitted proof that extension of time fee was timely paid nor paid an additional petition fee.

The extendable period for reply to the decision mailed March 7, 2016 has expired. The Office will not reach the merits of a request for reconsideration of the merits of a request for reconsideration of a decision dismissing a petition under 37 CFR 1.137(a) filed outside of the two-month period for reply, absent payment of the required extension of time fee.

Art Unit: OPET

Petitioner is not precluded from filing a new petition that meets all of the requirements of 1.137(a) including a statement that the “entire delay in filing the required reply from the due date for the reply until the filing of a grantable petition was unintentional”. Payment of the petition fee set forth in 1.137(b)(2) is required with the filing of the new petition. ***It is recommended that petitioner submit a new petition under 37 CFR 1.137(a) accompanied by the required fee (\$500.00 for a micro entity). The petition must be signed by both inventors.***

Petitioner is advised that effective December 18, 2013, petitions to revive an abandoned application under 37 CFR 1.137(a) are on the basis of *unintentional* delay. *See Changes to Implement the Patent Law Treaty*; Final Rule, 78 Fed. Reg. 62368, 62382 (October 21, 2013). Accordingly, applicant should complete and submit the attached petition form. The petition form must be properly signed by all of the inventors.

Receipt of the RCE fee in the micro entity amount is acknowledged. In view of receipt of the Micro Entity Status Form signed by both inventors filed August 29, 2017, the RCE fee may be accepted in the micro entity amount if accompanied by submission of a proper petition to revive and petition fee.

#### **Request to Waive the Rules under 37 CFR 1.183 and 1.48**

Petitioner states that the petition under 37 CFR 1.183 is renewed, but has not provided any additional arguments. In view of the signature of inventor Litsey on the petition, RCE, and amendment, it appears that inventor Litsey has agreed to join in the submission of the papers necessary to petition for revival of the application, but has not signed a request indicating that he should be removed as an inventor from the application. The petition will therefore be treated as a renewed petition again arguing that inventor Guymon believes his contribution to the inventorship of the application was greater than that of inventor Litsey, and that it has been difficult for him to obtain the signature of inventor Litsey.

At the outset, the paper on which this petition is filed is not signed by all of the applicants. Pursuant to 37 CFR 1.33(b), amendments and other papers filed in the application must be signed by all of the joint inventors (applicants), a registered patent practitioner, or an assignee as provided for under 37 CFR 3.71(b).

With regard to the petition to waive the rules, 37 CFR 1.183 states

In an extraordinary situation, when justice requires, any requirement of the regulations in this part which is not a requirement of the statutes may be suspended or waived by the Director or the Director's designee, *sua sponte*, or on petition of the interested party, subject to such other requirements as may be imposed. Any petition under this section must be accompanied by the petition fee set forth in § 1.17(f).

Art Unit: OPET

Petitioner's argument has been considered, but is not persuasive. While petitioner has not requested reconsideration of the request under 37 CFR 1.48, petitioner Guymon appears to still argue that there is a dispute as to the ownership. In this regard, 37 CFR 1.183 permits the Director to waive a rule when extraordinary circumstances exist and justice requires waiver of the rule. Applicant has not shown the existence of any extraordinary circumstances, however, where justice requires waiver of the rule requiring all inventors or their representatives sign amendments or other papers. Where, as here and as stated previously, the question of inventorship between the diverse parties is vigorously contested, the USPTO will not relax the requirement of 37 CFR 1.48 by way of 37 CFR 1.183.<sup>1</sup> As petitioners have not adequately shown that either an extraordinary situation is herein present or that "justice requires" waiver, the petition for waiver is dismissed.

It would be contrary to the intent of the regulations to permit, *ex parte*, by waiver of the rules, Petitioner to unilaterally extinguish the property rights that Litsey has in this application. Litsey, as a joint inventor, has a property right in this application that can be canceled, revoked, or annulled *only* by proceedings that afford due process of law.<sup>2</sup> An *ex parte* proceeding in the USPTO is not the appropriate forum for the contested extinction of a property right in an application.<sup>3</sup> That is especially so in, as here, the presence of the express objection of the party whose interest(s) is being extinguished.<sup>4</sup> It is well settled that the Office is not the appropriate forum for resolving a dispute concerning the ownership of an application, and, as such, the USPTO will not permit itself to become embroiled in ownership disputes.<sup>5</sup> Likewise, permitting the acceptance of amendments or other papers signed only by Guymon, without Litsey's assent, would prejudice Litsey's property rights in the application. Lastly, in circumstances as herein, the USPTO seeks to preserve the rights of all parties to the extent it is able.

Additionally, with regard to the difficulties described in having both inventors sign papers filed in the Office, 37 CFR 1.32(c)(1) as applicable to applications for patent filed before September 16, 2012 states that a power of attorney may name one or more joint inventors as representative. As such, the joint inventors may agree to give power of attorney to one or more joint inventors. Guymon and Litsey may therefore *agree jointly* to appoint Guymon a power of attorney. See also MPEP 402(I).

Accordingly, the petition is again **dismissed**.

# USPTO Fee Schedule

Effective January 16, 2018

The fee schedule provides information and fee rates for USPTO's products and services. All payments must be paid in U.S. dollars for the full amount of the fee required. View the [Accepted payment methods](#) page or call the USPTO Contact Center at 571-272-1000 or 800-786-9199 for assistance.

**Warning about non-USPTO solicitations** requesting payments that are sent by numerous companies unaffiliated with the USPTO.

## Patent Fees

The fees subject to reduction upon establishment of small entity status (37 CFR 1.27) or micro entity status (37 CFR 1.29) are shown in separate columns. Except for provisional applications, each application for a patent requires the appropriate search fee and examination fee in addition to the appropriate fee(s) in the "Patent Application Filing Fees" section below. This means each fee listed as a "Basic filing fee" in the "Patent Application Filing Fees" section should be accompanied by the appropriate search fee listed in the "Patent Search Fees" section as well as the appropriate examination fee listed in the "Patent Examination Fees" section. The \$400/\$200 non-electronic filing fee (fee codes 1090/2090/3090 or 1690/2690/3690) must be paid in addition to the filing, search and examination fees, in each original nonprovisional utility application filed in paper with the USPTO. The only way to avoid payment of the non-electronic filing fee is by filing your nonprovisional utility application via EFS-Web. The non-electronic filing fee does not apply to reissue, design, plant, or provisional applications.

### Trademark Fees

The 7000 series fee code (e.g., 7001, 7002, etc.) is used for electronic filing via TEAS. The fee required when combining post-registration filings is the sum of the separate fee amounts shown below.

| Trademark Processing Fees |                                                                                                     | Electronically Filed |            | Paper Filed |            |
|---------------------------|-----------------------------------------------------------------------------------------------------|----------------------|------------|-------------|------------|

Attention: Office of Petitions

**Mail Stop Petition**

Commissioner for Patents

P.O. Box 1450

Alexandria, VA 22313-1450

FAX (571) 273-8300

NOTE: If information or assistance is needed in completing this form, please contact the Office of Petitions at (571) 272-3282.

The above-identified application became abandoned for failure to file a timely and proper reply to a notice or action by the United States Patent and Trademark Office. The date of abandonment is the day after the expiration date of the period set for reply in the Office notice or action plus any extensions of time actually obtained.

**APPLICANT HEREBY PETITIONS FOR REVIVAL OF THIS APPLICATION.**

NOTE: A grantable petition requires the following items:

- (1) Petition fee;
- (2) Reply and/or issue fee;
- (3) Terminal disclaimer with disclaimer fee – required for all utility and plant applications filed before June 8, 1995, and for all design applications; and
- (4) Statement that the entire delay was unintentional.

**1. Petition fee**

Small entity fee \$ \_\_\_\_\_ (37 CFR 1.17(m)). Applicant asserts small entity status. See 37 CFR 1.27.

Micro entity fee \$ \_\_\_\_\_ (37 CFR 1.17(m)). Applicant certifies micro entity status. See 37 CFR 1.29. Form PTO/SB/15A or B or equivalent must either be enclosed or have been submitted previously.

Undiscounted fee \$ \_\_\_\_\_ (37 CFR 1.17(m)).

**2. Reply and/or fee**

A The reply and/or fee to the above-noted Office notice or action in the form of

\_\_\_\_\_ (identify the type of reply):

has been filed previously on \_\_\_\_\_.

is enclosed herewith.

B The issue fee and publication fee (if applicable) of \$ \_\_\_\_\_

has been paid previously on \_\_\_\_\_.

is enclosed herewith.

This collection of information is required by 37 CFR 1.137(b). The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11, 1.14 and 41.6. This collection is estimated to take 1 hour to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Mail Stop Petition, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

*If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.*

**PETITION FOR REVIVAL OF AN APPLICATION FOR PATENT  
ABANDONED UNINTENTIONALLY UNDER 37 CFR 1.137(a)**

Page 2 of 2

**3. Terminal disclaimer with disclaimer fee**

- Since this utility/plant application was filed on or after June 8, 1995, no terminal disclaimer is required.
- A terminal disclaimer (and disclaimer fee (37 CFR 1.20(d)) of \$ \_\_\_\_\_) disclaiming the required period of time is enclosed herewith (see PTO/SB/63).

**4. STATEMENT:** The entire delay in filing the required reply from the due date for the required reply until the filing of a grantable petition under 37 CFR 1.137(a) was unintentional. [NOTE: The United States Patent and Trademark Office may require additional information if there is a question as to whether either the abandonment or the delay in filing a petition under 37 CFR 1.137(a) was unintentional (MPEP 711.03(c), subsections (III)(C) and (D)).]

**WARNING:**

Petitioner/applicant is cautioned to avoid submitting personal information in documents filed in a patent application that may contribute to identity theft. Personal information such as social security numbers, bank account numbers, or credit card numbers (other than a check or credit card authorization form PTO-2038 submitted for payment purposes) is never required by the USPTO to support a petition or an application. If this type of personal information is included in documents submitted to the USPTO, petitioners/applicants should consider redacting such personal information from the documents before submitting them to the USPTO. Petitioner/applicant is advised that the record of a patent application is available to the public after publication of the application (unless a non-publication request in compliance with 37 CFR 1.213(a) is made in the application) or issuance of a patent. Furthermore, the record from an abandoned application may also be available to the public if the application is referenced in a published application or an issued patent (see 37 CFR 1.14). Checks and credit card authorization forms PTO-2038 submitted for payment purposes are not retained in the application file and therefore are not publicly available.

## Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Alexandria, VA 22313-1450

Dear Sir or Madam:

Now, with respect and appreciation, comes John Lewis Guymon Jr., Applicant, asking of the United States Patent And Trademark Office, under 37 C.F.R. §1.181, Petition To The Commissioner, to have review by the Commissioner's office of previous petition decisions dated Oct 31, 2017 and earlier. This renewed petition is the second request from Applicant for The Commissioner's involvement. Applicant, with due diligence and proper candor, petitions the office within the two (2) month reply period per 35 U.S.C. §21(b) and requests reconsideration of various petitions, certifications and office actions.

**Petition To The Commissioner  
&  
Cease & Desist**

Securable Independent Electronic Document  
Serial #12/316,699

Applicant believes he has presented material properly with good merit and just cause to fulfill the requirements of the current petitions and their relief asked for but has been prevented from the relief requested by employees of the United States Patent And Trademark Office (USPTO). Applicant has no other recourse with the prosecution process of the this application but to have constant focus on a review from the Commissioner.

**~ CEASE AND DESIST ~**

Applicant, John Lewis Guymon Jr., comes now, *pro bono publico* with just cause and worthy report, respectfully asking and immediately demanding that The United States Patent And Trademark Office (hereafter USPTO) cease and desist all activity harmful or otherwise causing harm, extenuating grief or delay to any one or all individual or individuals. Applicant additionally asks with respect for the USPTO to cease and desist and stop doing harm and causing grief and delay onset including that inflicted and caused upon Applicant during prosecution of the above-identified patent application.

Applicant requests review and renewed reconsideration of all decisions, certifications and other actions and events of this application, specifically those dated after April 2013.

Applicant has in his possession evidence of abuse, neglect, discrimination and other wrong doings and actions by employee's of the USPTO, having all said evidence available to anyone as it is currently supplied directly by the USPTO, and believes said evidence warrants the immediate cease and desist of the activities and actions of USPTO employee's as such activities are causing immediate and grave harm to Citizens of the United States as well as to Applicant, having Applicant suffer extreme harm, grief and injury as a result of the employee's responsible for the unjust and improper actions.

Applicant believed he followed procedures in regard to paperwork prosecution and with improper and unjust behavior of various employees allowed applicant's just and respectfully requested petition items to be ignored, or otherwise diminished or hidden from proper ruling party.

Applicant has suffered harm in this case and believes there is no alternative solution in place capable of supporting fair prosecution. Applicant therefore believes the only prosecution step available to the Applicant is an immediate petition to the Director and a request for the immediate cease and desist of the actions of the USPTO employees involved.

Applicant has acquired evidence in support of misdeeds done by the various USPTO employees from the USPTO's data supplied with their bulk data set releases for economic study for the 2014, 2015 and 2016 year, the USPTO's PAIR website, the USPTO's BULK pair website, the Global Dossier exchange link, the USPTO's XML bulk data site and petition decision web site. All supporting evidence is supplied via these mentioned ways, all publicly available.

~ 2 ~

**Petition To The Commissioner  
&  
Cease & Desist**

Securable Independent Electronic Document  
Serial #12/316,699

Applicant has in his possession unopened reply correspondence that are stamped with incorrect post marks. Further proof of improperly mailed items can be found in USPTO's PAIR system where a correspondence change generated return mail, having that return mail image available for review.

**~ MULTIPLE DEPARTMENT INVOLVEMENT ~**

Applicant believes the involved employees are numerous and work in several departments of the USPTO, including but not limited to the Office of Petitions and Office of Information Technology, and specifically those in charge of data transaction management. Applicant believes the employees in the Office Of Petitions, who are involved in petition decisions and routing of said petitions, have allowed Applicant's petitions to have ill course of prosecution with unfair and biased or other adverse decision. Applicant also believes employees involved in data management have had or allowed transaction alterations and/or adjustments and other potentially improper or illegal action. The actions of those who have allowed improper, incorrect, or otherwise unethical has allowed Applicant's petition's prosecution to be slowed, altered and otherwise improperly affected.

- Applicant believes there are others involved who work in various different offices of the USPTO that are involved in database management, data entry and/or other data input entities.
- Data is purposely omitted from the transaction files, event code files and other files accordingly. These missing data elements and omitted event codes are in the USPTO's data repository and is selectively omitted before distribution.
- Data transactions are dated improperly or otherwise al
- owed filing out of sequence fir application prosecution filing manipulated or tampered with.
- The process flow for petitions allow inappropriate control, having date stamps pretended/word for put on later and as if always there, missing, altered or otherwise out of date
- Accessibility to PAIR website resources is affected by a person's request for information by way of restricting, not allowing or interruption of use or such use's result.

There is web site script for the PAIR IFW page that hides the last activities of file prosecution, especially those related to patent term adjustments. Further, there is script code for the transaction tab to have entries hidden. These areas that lack complete data elements are meant to deceive the user and make discovery more difficult.

Generated PDF's that include text used for searches often include extra random characters therefore making key terms unable to be found. This is done purposely on improperly generated documents.

Further the manipulation, alteration or otherwise withholding of information of the applications involved is substantial and is being done by multiple departments within the USPTO.

**Petition To The Commissioner  
&  
Cease & Desist**

Securable Independent Electronic Document  
Serial #12/316,699

**~ OPPT PETITIONS ~**

Improper petitions are found with OPPT and MOPPT event codes outside of petition related documents. OPPT-Transactions between the OPPT and MOPPT, with the IMIS document showing the identity of the employee involved.

The OPPT petition practice started January 7, 2014 with application 12/931,.967. According to e2016 where the cut off date is August 8, 2017, there were a total of over 48,800. Patterns exist where valid petition decisions are appropriately worked on in a scheduled manner and invalid OPPT type petition decisions are erratically completed and done so to a particular schedule or desired order without consideration to proper order and priority or position.

There are OPPT decisions/actions done within range of included documents that don't necessarily include an IMIS type document, one that shows the name of the deciding official involved.

With the OPPT type petitions the graphics in the document header are messed up. All of the petitions are signed as advisors therefore removing liability, there are random purposeful mistakes are throughout, and frequently will be of a status denied or dismissed and yet the actions are as if granted. Petitions are used with either decision to the advantage of the person and patentee or to harm the patentee accordingly. For example, with Application #12/734,283, the petition is denied, however, the patent term adjustment is still made. Many patent term adjustments are done with the OPPT petition type.

Good petition decisions are found searching for the normal PTDI, PTDE or PTGR or the sub-event codes for petition decisions. These decisions of good practice mix with the OPPT petition types and further verify and prove of the phony petitions existence.

OPPT- The ULR's have copied of the same petitions as in the application file but with a date stamp that for most causes is improper; the date stamp is not on the decision of the documents in PAIR, having the title graphics still in proof stage (dotted line).

**Petition To The Commissioner  
&  
Cease & Desist**

Securable Independent Electronic Document  
Serial #12/316,699

data sets showing patterns of data manipulation for the intent of hiding the missing events give hint as to what applications were possibly involved in the SAWS program.

Applicant believes there is a significant count more than the estimated 70K. Out of the 10,451,059 total applications in the 2016 data set Applicant believes the total SAWS related applications could be over 1/2 Million (500,000) if not more.

SAWS- Some applications are still being segregated, favored or otherwise improperly affected. There needs to be indicators or something other that goes with prosecution so that an inventor knows if his application is specially flagged in any way.

Until the USPTO gives complete access to the transaction events and other data of patent application files there can be no checks and balances. Without the cooperation from the USPTO or the accumulation of application files offered in bulk to the public, open transparency cannot exist and people in position who can manipulate the system will tend to do so.

The findings centered around the case or file lost/found (LOST/FOND) events may be inaccurate as these event type codes were entered erroneously in the data sets therefore affecting actual event occurrence counts.

The data sets allow easy analysis of the data, thus allowing a person to suggest which applications are included. It is only the 'marks on the application's file folder' that can honestly verify such

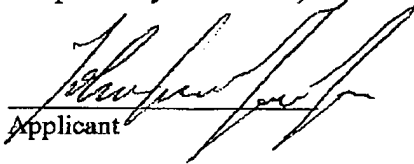

**~ CONCLUSION ~**

Applicant contacted all the different departments that could be found such as Pro Se Assistance Program, Inventers Assistance Center, Ombudsman Program, having most of the time to be told to contact Mr. Wood @ 571-272-3231, as he was the one in charge of my file. Additionally I talked with people in the Deputy Commissioners office with no help or success.

Applicant asks again for the improper and harmful activities and other actions of the employees of the USPTO cease and desist immediately.

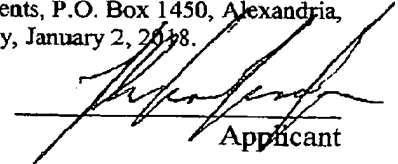

Thank you.

Respectfully submitted,

  
Applicant

Dear Sir or Madam:

Now, with respect and appreciation, comes John Lewis Guymon Jr., Applicant, asking of the United States Patent And Trademark Office, under 37 C.F.R. §1.181, Petition To The Commissioner, to have review by the Commissioner's office of previous petition decisions dated Oct 31, 2017 and earlier. This renewed petition is the second request from Applicant for The Commissioner's involvement. Applicant, with due diligence and proper candor, petitions the office within the two (2) month reply period per 35 U.S.C. §21(b) and requests reconsideration of various petitions, certifications and office actions.

**Petition To The Commissioner  
&  
Cease & Desist**

Securable Independent Electronic Document  
Serial #12/316,699

Applicant believes he has presented material properly with good merit and just cause to fulfill the requirements of the current petitions and their relief asked for but has been prevented from the relief requested by employees of the United States Patent And Trademark Office (USPTO). Applicant has no other recourse with the prosecution process of the this application but to have constant focus on a review from the Commissioner.

**~ CEASE AND DESIST ~**

Applicant, John Lewis Guymon Jr., comes now, *pro bono publico* with just cause and worthy report, respectfully asking and immediately demanding that The United States Patent And Trademark Office (hereafter USPTO) cease and desist all activity harmful or otherwise causing harm, extenuating grief or delay to any one or all individual or individuals. Applicant additionally asks with respect for the USPTO to cease and desist and stop doing harm and causing grief and delay onset including that inflicted and caused upon Applicant during prosecution of the above-identified patent application.

Applicant requests review and renewed reconsideration of all decisions, certifications and other actions and events of this application, specifically those dated after April 2013.

Applicant has in his possession evidence of abuse, neglect, discrimination and other wrong doings and actions by employee's of the USPTO, having all said evidence available to anyone as it is currently supplied directly by the USPTO, and believes said evidence warrants the immediate cease and desist of the activities and actions of USPTO employee's as such activities are causing immediate and grave harm to Citizens of the United States as well as to Applicant, having Applicant suffer extreme harm, grief and injury as a result of the employee's responsible for the unjust and improper actions.

Applicant believed he followed procedures in regard to paperwork prosecution and with improper and unjust behavior of various employees allowed applicant's just and respectfully requested petition items to be ignored, or otherwise diminished or hidden from proper ruling party.

Applicant has suffered harm in this case and believes there is no alternative solution in place capable of supporting fair prosecution. Applicant therefore believes the only prosecution step available to the Applicant is an immediate petition to the Director and a request for the immediate cease and desist of the actions of the USPTO employees involved.

Applicant has acquired evidence in support of misdeeds done by the various USPTO employees from the USPTO's data supplied with their bulk data set releases for economic study for the 2014, 2015 and 2016 year, the USPTO's PAIR website, the USPTO's BULK pair website, the Global Dossier exchange link, the USPTO's XML bulk data site and petition decision web site. All supporting evidence is supplied via these mentioned ways, all publicly available.

~ 2 ~

**Petition To The Commissioner  
&  
Cease & Desist**

Securable Independent Electronic Document  
Serial #12/316,699

Applicant has in his possession unopened reply correspondence that are stamped with incorrect post marks. Further proof of improperly mailed items can be found in USPTO's PAIR system where a correspondence change generated return mail, having that return mail image available for review.

**~ MULTIPLE DEPARTMENT INVOLVEMENT ~**

Applicant believes the involved employees are numerous and work in several departments of the USPTO, including but not limited to the Office of Petitions and Office of Information Technology, and specifically those in charge of data transaction management. Applicant believes the employees in the Office Of Petitions, who are involved in petition decisions and routing of said petitions, have allowed Applicant's petitions to have ill course of prosecution with unfair and biased or other adverse decision. Applicant also believes employees involved in data management have had or allowed transaction alterations and/or adjustments and other potentially improper or illegal action. The actions of those who have allowed improper, incorrect, or otherwise unethical has allowed Applicant's petition's prosecution to be slowed, altered and otherwise improperly affected.

- Applicant believes there are others involved who work in various different offices of the USPTO that are involved in database management, data entry and/or other data input entities.
- Data is purposely omitted from the transaction files, event code files and other files accordingly. These missing data elements and omitted event codes are in the USPTO's data repository and is selectively omitted before distribution.
- Data transactions are dated improperly or otherwise al
- owed filing out of sequence fir application prosecution filing manipulated or tampered with.
- The process flow for petitions allow inappropriate control, having date stamps pretended/word for put on later and as if always there, missing, altered or otherwise out of date
- Accessibility to PAIR website resources is affected by a person's request for information by way of restricting, not allowing or interruption of use or such use's result.

There is web site script for the PAIR IFW page that hides the last activities of file prosecution, especially those related to patent term adjustments. Further, there is script code for the transaction tab to have entries hidden. These areas that lack complete data elements are meant to deceive the user and make discovery more difficult.

Generated PDF's that include text used for searches often include extra random characters therefore making key terms unable to be found. This is done purposely on improperly generated documents.

Further the manipulation, alteration or otherwise withholding of information of the applications involved is substantial and is being done by multiple departments within the USPTO.

**Petition To The Commissioner  
&  
Cease & Desist**

**Securable Independent Electronic Document  
Serial #12/316,699**

**~ OPPT PETITIONS ~**

Improper petitions are found with OPPT and MOPPT event codes outside of petition related documents. OPPT-Transactions between the OPPT and MOPPT, with the IMIS document showing the identity of the employee involved.

The OPPT petition practice started January 7, 2014 with application 12/931,967. According to e2016 where the cut off date is August 8, 2017, there were a total of over 48,800. Patterns exist where valid petition decisions are appropriately worked on in a scheduled manner and invalid OPPT type petition decisions are erratically completed and done so to a particular schedule or desired order without consideration to proper order and priority or position.

There are OPPT decisions/actions done within range of included documents that don't necessarily include an IMIS type document, one that shows the name of the deciding official involved.

With the OPPT type petitions the graphics in the document header are messed up. All of the petitions are signed as advisors therefore removing liability, there are random purposeful mistakes are throughout, and frequently will be of a status denied or dismissed and yet the actions are as if granted. Petitions are used with either decision to the advantage of the person and patentec or to harm the patentee accordingly. For example, with Application #12/734,283, the petition is denied, however, the patent term adjustment is still made. Many patent term adjustments are done with the OPPT petition type.

Good petition decisions are found searching for the normal PTDI, PTDE or PTGR or the sub-event codes for petition decisions. These decisions of good practice mix with the OPPT petition types and further verify and prove of the phony petitions existence.

OPPT- The ULR's have copied of the same petitions as in the application file but with a date stamp that for most causes is improper; the date stamp is not on the decision of the documents in PAIR, having the title graphics still in proof stage (dotted line).

**~ PETITIONS ARE WITHHELD HIJACKED OR WITH IMPROPER DECISION ~**

Applicant believes petitions entered in this application have been improperly handled by unfitting individuals within the Office Of Petitions; such individuals have inappropriately ruled on said petitions, while said petitions should have rightly been sent to and decided upon by the appropriate departments.

Applicant swears, affirms and believes:

- Employees of the USPTO's Office of Petitions and/or other departments have taken improper control of petition operations
- Petitions have been ruled improperly on over 48K petitions since January 2014 according to the 2016 data set event code OPPT. All three types of petitions (Granted, Denied and Dismissed) have been improperly ruled. The correct and properly generated petition decisions of before, during and now, currently, show valid procedure that further validates the incorrect procedures of said OPPT type decisions.
- The Office of Petitions has entered a multitude of properly ruled decisions since January 2014, having these decisions show and prove correct procedure. Such proof, in concurrent existence, shows a normal decision procedure or course taken.
- Unfair, biased, and misdirected prosecution for applications
- Employee's of USPTO's Mailing Operations (both incoming and outgoing) engage in or otherwise allow improper document handling.
- Representative attorney firms of certain applications are manipulating actual representing attorney's during improperly prosecuted times of such application
- Patent term adjustments allowed that are not proper. Many decisions are OPPT.
- Applications are being favored and assisted unfairly. (Helping some)
- Applications are being affected and hampered unfairly. (Hurting others)

It seems that anyone is signing as an attorney advisor. We all are advisors, everyday, whether to our family or friends or, occasionally perhaps to an attorney. Petition decisions need to have more signature weight and confirmation - the attorneys involved as officials in decisions need to sign as such attorneys.

Decisions never finalize and therefore prevent proper file prosecution thereby using up an application's term of the patent protection.

**Petition To The Commissioner  
&  
Cease & Desist**

Securable Independent Electronic Document  
Serial #12/316,699

Applicant believes the petition decisions made by Attorney Douglas I. Wood have been biased and unfair to Applicant. Further, Mr. Wood has engaged in unethical and improper conduct and should, as Applicant believes from and of proof of evidence (all from USPTO) to therefore support claim, be disbarred with his license to practice as an Attorney in Maryland, License #9812170297 revoked.

The system is built so that later entries show up earlier in IFW, therefore allowing a petition to appear elsewhere, as in the case of Applicants 8/24/2015 Correction Of Inventorship petition . The transaction numbers are so much further than others that actually appear later on in IFW. This process has been done to delay many different petition entries of other application files in 2016 data.

The PDFS then hide most of the paper entries with the table of contents pinpointing particular items. However when a PDF is made for 12316699, the application mentioned herein, the PDF entries point to incorrect papers.

The two petitions Applicant express mailed August 24, 2015 were Request for Refund and Correction Of Inventorship.

One of the petitions, the refund request was entered on the 24th as the entire paperwork set. The other was entered in March 2016 as '12316699,73,PET.,2015-08-24' after '12316699,72,OPPT,2016-03-04', the transaction that was entered into the file before it.

First, the refund, which is the actual IFW paperwork entry containing a cover, refund request petition, inventorship correction petition, having each petition having other items attached to and to be included in.

The other petition, for inventorship correction was entered into PALM by Douglas I. Wood when he was entering his decision, one that should have been made by a different department, and points to a copy of the cover letter and a copy of a previously paid check, a total of 5 pages. Further, these five pages contain a date stamp from the office of petitions of an improper date that should not have been possible for entry.

The 5 pages when displayed in PALM's IFW tab are mistakenly referenced as the correction petition. The Correction Of Inventorship petition which is made up of nearly 100 pages is actually part of what the refund petition document. Both were placed and referenced into PALM incorrectly.

Control of the 1.181 and 1.182 petitions further show interception and mishandling of Mr. Wood as these petition decisions should have had others involved.

Evidence in my petitions is thorough and complete and has been overlooked and not considered properly.

**Petition To The Commissioner  
&  
Cease & Desist**

Securable Independent Electronic Document  
Serial #12/316,699

Patent applications are not able to be prosecuted properly to finally grant allowing others to file an application of patent and get it granted first. A vast majority of applications are international and brought back into the United States patent system this way.

**~ MANIPULATED INCOMPLETE AND MISLEADING DATA ~**

All of the transaction datasets have missing transaction event entries purposely withheld from the USPTO. The ending event count for the 2016 data should have been **402,292,551** but was delivered with **337,600,355** total transactions. An estimated count of the missing transactions, having surrounding events as determining placeholders, is approximately **64,692,196** transactions, equating to **16%** missing.

Some event codes and their related transaction events are not presented within the publicly available data sets, intentionally left out or omitted during data set generation.

Some event transactions were part of data, having the event code not in the list or transaction data. OPPT, as example, was used in 2014 data but was absent in the event code database table for the year 2014.

Database alterations include event transaction entries 'DVER' & 'BIG.' and others inserted into the blank transaction event locations in older patents, dated 1990's and such, having these applications not using this event code, especially in the previously missing event code locations. Data has been backfield with erroneous event codes to sidetrack counts. There were a total of 1564 duplicated event entries within the 2016 data set.

The three bulk data sets for 2014, 2015 and 2016 are available at:

<https://bulkdata.uspto.gov/data/patent/pair/economics/2014/>  
<https://bulkdata.uspto.gov/data/patent/pair/economics/2015/>  
<https://bulkdata.uspto.gov/data/patent/pair/economics/2016/>

The following attributes are for the **transactions.csv.zip** files reviewed.

| Year | Size (Disk)   | Unzipped       | Zipped        | Date & Time       | Checksum |
|------|---------------|----------------|---------------|-------------------|----------|
| 2014 | 2,629,324,587 | 8,635,467,003  | 2,629,324,297 | 11/27/2015 7:09pm | 68E5E2C4 |
| 2015 | 3,075,369,797 | 9,298,180,034  | 3,075,369,507 | 7/15/2016 5:45pm  | 3B926E62 |
| 2016 | 2,055,399,119 | 10,248,334,384 | 2,055,398,829 | 8/8/2017 6:00pm   | 72F9F6C2 |

**~ SENSITIVE APPLICATION WARNING SYSTEM - ("SAWS") ~**

Program or it's intended operational effect is still in process and attempts at hiding or manipulating the programs affected applications data have occurred and may currently be occurring. The program affects a much larger application pool, Applicant believes, based on true and correct knowledge to be upwards to 1 million rather than the believed 70K previously thought. Comparison of the 3 different

~ 7 ~

**Petition To The Commissioner  
&  
Cease & Desist**

Securable Independent Electronic Document  
Serial #12/316,699

data sets showing patterns of data manipulation for the intent of hiding the missing events give hint as to what applications were possibly involved in the SAWS program.

Applicant believes there is a significant count more than the estimated 70K. Out of the 10,451,059 total applications in the 2016 data set Applicant believes the total SAWS related applications could be over 1/2 Million (500,000) if not more.

SAWS- Some applications are still being segregated, favored or otherwise improperly affected. There needs to be indicators or something other that goes with prosecution so that an inventor knows if his application is specially flagged in any way.

Until the USPTO gives complete access to the transaction events and other data of patent application files there can be no checks and balances. Without the cooperation from the USPTO or the accumulation of application files offered in bulk to the public, open transparency cannot exist and people in position who can manipulate the system will tend to do so.

The findings centered around the case or file lost/found (LOST/FOND) events may be inaccurate as these event type codes were entered erroneously in the data sets therefore affecting actual event occurrence counts.

The data sets allow easy analysis of the data, thus allowing a person to suggest which applications are included. It is only the 'marks on the application's file folder' that can honestly verify such

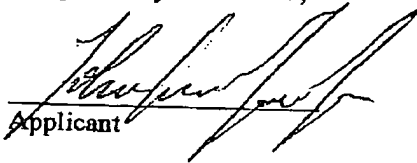

**~ CONCLUSION ~**

Applicant contacted all the different departments that could be found such as Pro Se Assistance Program, Inventers Assistance Center, Ombudsman Program, having most of the time to be told to contact Mr. Wood @ 571-272-3231, as he was the one in charge of my file. Additionally I talked with people in the Deputy Commissioners office with no help or success.

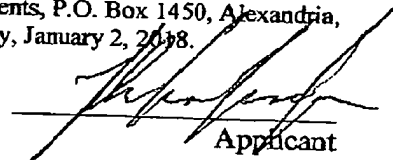

Applicant asks again for the improper and harmful activities and other actions of the employees of the USPTO cease and desist immediately.

Thank you.

Respectfully submitted,

  
Applicant

Applicant has in his possession unopened reply correspondence that are stamped with incorrect post marks. Further proof of improperly mailed items can be found in USTPO's PAIR system where a correspondence change generated return mail, having that return mail image available for review.

**~ MULTIPLE DEPARTMENT INVOLVEMENT ~**

Applicant believes the involved employees are numerous and work in several departments of the USPTO, including but not limited to the Office of Petitions and Office of Information Technology, and specifically those in charge of data transaction management. Applicant believes the employees in the Office Of Petitions, who are involved in petition decisions and routing of said petitions, have allowed Applicant's petitions to have ill course of prosecution with unfair and biased or other adverse decision. Applicant also believes employees involved in data management have had or allowed transaction alterations and/or adjustments and other potentially improper or illegal action. The actions of those who have allowed improper, incorrect, or otherwise unethical has allowed Applicant's petition's prosecution to be slowed, altered and otherwise improperly affected.

- Applicant believes there are others involved who work in various different offices of the USPTO that are involved in database management, data entry and/or other data input entities.
- Data is purposely omitted from the transaction files, event code files and other files accordingly. These missing data elements and omitted event codes are in the USPTO's data repository and is selectively omitted before distribution.
- Data transactions are dated improperly or otherwise al
- owed filing out of sequence fir application prosecution filing manipulated or tampered with.
- The process flow for petitions allow inappropriate control, having date stamps pretended/word for put on later and as if always there, missing, altered or otherwise out of date
- Accessibility to PAIR website resources is affected by a person's request for information by way of restricting, not allowing or interruption of use or such use's result.

There is web site script for the PAIR IFW page that hides the last activities of file prosecution, especially those related to patent term adjustments. Further, there is script code for the transaction tab to have entries hidden. These areas that lack complete data elements are meant to deceive the user and make discovery more difficult.

Generated PDF's that include text used for searches often include extra random characters therefore making key terms unable to be found. This is done purposely on improperly generated documents.

Further the manipulation, alteration or otherwise withholding of information of the applications involved is substantial and is being done by multiple departments within the USPTO.

**~ OPPT PETITIONS ~**

Improper petitions are found with OPPT and MOPPT event codes outside of petition related documents. OPPT-Transactions between the OPPT and MOPPT, with the IMIS document showing the identity of the employee involved.

The OPPT petition practice started January 7, 2014 with application 12/931,967. According to e2016 where the cut off date is August 8, 2017, there were a total of over 48,800.

Patterns exist where valid petition decisions are appropriately worked on in a scheduled manner and invalid OPPT type petition decisions are erratically completed and done so to a particular schedule or desired order without consideration to proper order and priority or position.

There are OPPT decisions/actions done within range of included documents that don't necessarily include an IMIS type document, one that shows the name of the deciding official involved.

With the OPPT type petitions the graphics in the document header are messed up. All of the petitions are signed as advisors therefore removing liability, there are random purposeful mistakes are throughout, and frequently will be of a status denied or dismissed and yet the actions are as if granted. Petitions are used with either decision to the advantage of the person and patentee or to harm the patentee accordingly. For example, with Application #12/734,283, the petition is denied, however, the patent term adjustment is still made. Many patent term adjustments are done with the OPPT petition type.

Good petition decisions are found searching for the normal PTDI, PTDE or PTGR or the sub-event codes for petition decisions. These decisions of good practice mix with the OPPT petition types and further verify and provc of the phony petitions existencce.

OPPT- The ULR's have copied of the same petitions as in the application file but with a date stamp that for most causes is improper; the date stamp is not on the decision of the documents in PAIR, having the title graphics still in proof stage (dotted line).

**~ PETITIONS ARE WITHHELD HIJACKED OR WITH IMPROPER DECISION ~**

Applicant believes petitions entered in this application have been improperly handled by unfitting individuals within the Office Of Petitions; such individuals have inappropriately ruled on said petitions, while said petitions should have rightly been sent to and decided upon by the appropriate departments.

Applicant swears, affirms and believes:

- Employees of the USPTO's Office of Petitions and/or other departments have taken improper control of petition operations
- Petitions have been ruled improperly on over 48K petitions since January 2014 according to the 2016 data set event code OPPT. All three types of petitions (Granted, Denied and Dismissed) have been improperly ruled. The correct and properly generated petition decisions of before, during and now, currently, show valid procedure that further validates the incorrect procedures of said OPPT type decisions.
- The Office of Petitions has entered a multitude of properly ruled decisions since January 2014, having these decisions show and prove correct procedure. Such proof, in concurrent existence, shows a normal decision procedure or course taken.
- Unfair, biased, and misdirected prosecution for applications
- Employee's of USPTO's Mailing Operations (both incoming and outgoing) engage in or otherwise allow improper document handling.
- Representative attorney firms of certain applications are manipulating actual representing attorney's during improperly prosecuted times of such application
- Patent term adjustments allowed that are not proper. Many decisions are OPPT.
- Applications are being favored and assisted unfairly. (Helping some)
- Applications are being affected and hampered unfairly. (Hurting others)

It seems that anyone is signing as an attorney advisor. We all are advisors, everyday, whether to our family or friends or, occasionally perhaps to an attorney. Petition decisions need to have more signature weight and confirmation - the attorneys involved as officials in decisions need to sign as such attorneys.

Decisions never finalize and therefore prevent proper file prosecution thereby using up an application's term of the patent protection.

**Petition To The Commissioner  
&  
Cease & Desist**

Securable Independent Electronic Document  
Serial #12/316,699

Applicant believes the petition decisions made by Attorney Douglas I. Wood have been biased and unfair to Applicant. Further, Mr. Wood has engaged in unethical and improper conduct and should, as Applicant believes from and of proof of evidence (all from USPTO) to therefore support claim, be disbarred with his license to practice as an Attorney in Maryland, License #9812170297 revoked.

The system is built so that later entries show up earlier in IFW, therefore allowing a petition to appear elsewhere, as in the case of Applicants 8/24/2015 Correction Of Inventorship petition ,. The transaction numbers are so much further than others that actually appear later on in IFW. This process has been done to delay many different petition entries of other application files in 2016 data.

The PDFS then hide most of the paper entries with the table of contents pinpointing particular items. However when a PDF is made for 12316699, the application mentioned herein, the PDF entries point to incorrect papers.

The two petitions Applicant express mailed August 24, 2015 were Request for Refund and Correction Of Inventorship.

One of the petitions, the refund request was entered on the 24th as the entire paperwork set. The other was entered in March 2016 as '12316699,73,PET.,2015-08-24' after '12316699,72,OPPT,2016-03-04', the transaction that was entered into the file before it.

First, the refund, which is the actual IFW paperwork entry containing a cover, refund request petition, inventorship correction petition, having each petition having other items attached to and to be included in.

The other petition, for inventorship correction was entered into PALM by Douglas I. Wood when he was entering his decision, one that should have been made by a different department, and points to a copy of the cover letter and a copy of a previously paid check, a total of 5 pages. Further, these five pages contain a date stamp from the office of petitions of an improper date that should not have been possible for entry.

The 5 pages when displayed in PALM's IFW tab are mistakenly referenced as the correction petition. The Correction Of Inventorship petition which is made up of nearly 100 pages is actually part of what the refund petition document. Both were placed and referenced into PALM incorrectly.

Control of the 1.181 and 1.182 petitions further show interception and mishandling of Mr. Wood as these petition decisions should have had others involved.

Evidence in my petitions is thorough and complete and has been overlooked and not considered properly.

Patent applications are not able to be prosecuted properly to finally grant allowing others to file an application of patent and get it granted first. A vast majority of applications are international and brought back into the United States patent system this way.

**~ MANIPULATED INCOMPLETE AND MISLEADING DATA ~**

All of the transaction datasets have missing transaction event entries purposely withheld from the USPTO. The ending event count for the 2016 data should have been **402,292,551** but was delivered with **337,600,355** total transactions. An estimated count of the missing transactions, having surrounding events as determining placeholders, is approximately **64,692,196** transactions, equating to **16%** missing.

Some event codes and their related transaction events are not presented within the publicly available data sets, intentionally left out or omitted during data set generation.

Some event transactions were part of data, having the event code not in the list or transaction data. OPPT, as example, was used in 2014 data but was absent in the event code database table for the year 2014.

Database alterations include event transaction entries 'DVER' & 'BIG.' and others inserted into the blank transaction event locations in older patents, dated 1990's and such, having these applications not using this event code, especially in the previously missing event code locations. Data has been backfield with erroneous event codes to sidetrack counts. There were a total of 1564 duplicated event entries within the 2016 data set.

The three bulk data sets for 2014, 2015 and 2016 are available at:

<https://bulkdata.uspto.gov/data/patent/pair/economics/2014/>  
<https://bulkdata.uspto.gov/data/patent/pair/economics/2015/>  
<https://bulkdata.uspto.gov/data/patent/pair/economics/2016/>

The following attributes are for the **transactions.csv.zip** files reviewed.

| Year | Size (Disk)   | Unzipped       | Zipped        | Date & Time       | Checksum |
|------|---------------|----------------|---------------|-------------------|----------|
| 2014 | 2,629,324,587 | 8,635,467,003  | 2,629,324,297 | 11/27/2015 7:09pm | 68E5E2C4 |
| 2015 | 3,075,369,797 | 9,298,180,034  | 3,075,369,507 | 7/15/2016 5:45pm  | 3B926E62 |
| 2016 | 2,055,399,119 | 10,248,334,384 | 2,055,398,829 | 8/8/2017 6:00pm   | 72F9F6C2 |

**~ SENSITIVE APPLICATION WARNING SYSTEM - ("SAWS") ~**

Program or it's intended operational effect is still in process and attempts at hiding or manipulating the programs affected applications data have occurred and may currently be occurring. The program affects a much larger application pool, Applicant believes, based on true and correct knowledge to be upwards to 1 million rather than the believed 70K previously thought. Comparison of the 3 different

**Petition To The Commissioner  
&  
Cease & Desist**

Securable Independent Electronic Document  
Serial #12/316,699

data sets showing patterns of data manipulation for the intent of hiding the missing events give hint as to what applications were possibly involved in the SAWS program.

Applicant believes there is a significant count more than the estimated 70K. Out of the 10,451,059 total applications in the 2016 data set Applicant believes the total SAWS related applications could be over 1/2 Million (500,000) if not more.

SAWS- Some applications are still being segregated, favored or otherwise improperly affected. There needs to be indicators or something other that goes with prosecution so that an inventor knows if his application is specially flagged in any way.

Until the USPTO gives complete access to the transaction events and other data of patent application files there can be no checks and balances. Without the cooperation from the USPTO or the accumulation of application files offered in bulk to the public, open transparency cannot exist and people in position who can manipulate the system will tend to do so.

The findings centered around the case or file lost/found (LOST/FOND) events may be inaccurate as these event type codes were entered erroneously in the data sets therefore affecting actual event occurrence counts.

The data sets allow easy analysis of the data, thus allowing a person to suggest which applications are included. It is only the 'marks on the application's file folder' that can honestly verify such

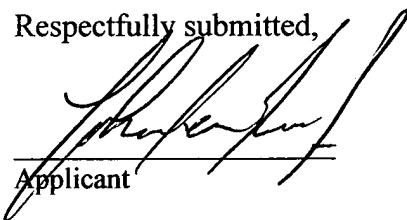

**~ CONCLUSION ~**

Applicant contacted all the different departments that could be found such as Pro Se Assistance Program, Inventors Assistance Center, Ombudsman Program, having most of the time to be told to contact Mr. Wood @ 571-272-3231, as he was the one in charge of my file. Additionally I talked with people in the Deputy Commissioners office with no help or success.

Applicant asks again for the improper and harmful activities and other actions of the employees of the USPTO cease and desist immediately.

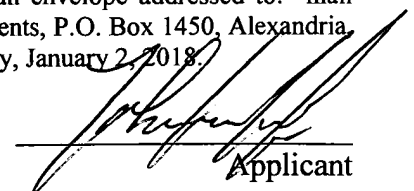

Thank you.

Respectfully submitted,

  
Applicant

www.uspto.gov

In re Application of :  
Guymon et al. :  
Application No. 12/316,699 : DECISION ON PETITIONS  
Filed: 12/15/2008 : UNDER 37 CFR 1.183 and 1.137(a)  
For: SECURABLE INDEPENDENT :  
ELECTRONIC DOCUMENT :

This is a decision on the papers filed August 29, 2017, which are treated as a (1) a petition under 37 CFR 1.183 to waive the rules and accept papers which are not signed by all inventors; (2) a renewed petition to revive the above-identified application under 37 CFR 1.137(a).

The petitions are again **dismissed** for the reasons stated below.

Any request for reconsideration of this decision must be submitted within **TWO (2) MONTHS** from the mail date of this decision. Extensions of time under 37 CFR 1.136(a) are permitted. The reconsideration request should include a cover letter entitled "Renewed Petition." This is not a final agency decision.

In response to the decision mailed June 29, 2017, petitioners have filed a request for reconsideration. Petitioners state that all petitions are requested renewed except the petition for correction of inventorship (37 CFR 1.48) and for refund (37 CFR 1.26). As such, the petition paper is considered a petition requesting reconsideration of the petition under 37 CFR 1.183 and 1.137(a).

### **Request to Waive the Rules under 37 CFR 1.183**

The petition again requests waiver under 37 CFR 1.183 of the requirement that amendments and other papers be signed by both inventors. This petition, signed only by inventor Guymon, indicates that inventor Guymon believes his contribution to the inventorship of the application was greater than that of inventor Litsey, and that it has been difficult for him to obtain the signature of inventor Litsey.

At the outset, the paper on which this petition is filed is not signed by all of the applicants. Pursuant to 37 CFR 1.33(b), amendments and other papers filed in the application must be signed by all of the joint inventors (applicants), a registered patent practitioner, or an assignee as provided for under 37 CFR 3.71(b).

With regard to the petition to waive the rules, 37 CFR 1.183 states

In an extraordinary situation, when justice requires, any requirement of the regulations in this part which is not a requirement of the statutes may be

Art Unit: OPET

suspended or waived by the Director or the Director's designee, *sua sponte*, or on petition of the interested party, subject to such other requirements as may be imposed. Any petition under this section must be accompanied by the petition fee set forth in § 1.17(f) .

Petitioner's argument has been considered, but is not persuasive. While petitioner has not requested reconsideration of the request under 37 CFR 1.48, petitioner Guymon appears to still argue that there is a dispute as to the ownership. In this regard, 37 CFR 1.183 permits the Director to waive a rule when extraordinary circumstances exist and justice requires waiver of the rule. Applicant has not shown the existence of any extraordinary circumstances, however, where justice requires waiver of the rule requiring all inventors or their representatives sign amendments or other papers. Where, as here and as stated previously, the question of inventorship between the diverse parties is vigorously contested, the USPTO will not relax the requirement of 37 CFR 1.48 by way of 37 CFR 1.183.<sup>1</sup> As petitioners have not adequately shown that either an extraordinary situation is herein present or that "justice requires" waiver, the petition for waiver is dismissed.

It would be contrary to the intent of the regulations to permit, *ex parte*, by waiver of the rules, Petitioner to unilaterally extinguish the property rights that Litsey has in this application. Litsey, as a joint inventor, has a property right in this application that can be canceled, revoked, or annulled *only* by proceedings that afford due process of law.<sup>2</sup> An *ex parte* proceeding in the USPTO is not the appropriate forum for the contested extinction of a property right in an application.<sup>3</sup> That is especially so in, as here, the presence of the express objection of the party whose interest(s) is being extinguished.<sup>4</sup> It is well settled that the Office is not the appropriate forum for resolving a dispute concerning the ownership of an application, and, as such, the USPTO will not permit itself to become embroiled in ownership disputes.<sup>5</sup> Likewise, permitting the acceptance of amendments or other papers signed only by Guymon, without Litsey's assent, would prejudice Litsey's property rights in the application. Lastly, in circumstances as herein, the USPTO seeks to preserve the rights of all parties to the extent it is able.

Additionally, with regard to the difficulties described in having both inventors sign papers filed in the Office, 37 CFR 1.32(c)(1) as applicable to applications for patent filed before September 16, 2012 states that a power of attorney may name one or more joint inventors as representative. As such, the joint inventors may agree to give power of attorney to one or more joint inventors. Guymon and Litsey may therefore *agree jointly* to appoint Guymon a power of attorney. See also MPEP 402.02(b).

Art Unit: OPET

Accordingly, the petition is **dismissed**.

### **Proper Extension of Time and Fee Have Not Been Supplied**

Petitioners assert in the renewed petition signed by both joint inventors that a three month extension of time was filed on Saturday, August 8, 2016, and that the extension of time fee was properly paid in the micro entity amount of \$350. Petitioner notes that a Micro Entity Status Certification has now been filed with the subject renewed petition, and that the previously paid fee should be considered properly paid in the micro entity amount.

Petitioner's argument has been considered, but is not persuasive. MPEP 509.04(I) states that a fee may be paid in the micro entity amount only if it is submitted with, or subsequent, the submission of a certification of entitlement to micro entity status. In order for a three (3) month extension in response to the decision mailed March 7, 2016 to be payable in the micro entity amount, both the fee and a properly signed Micro Entity Status Certification would have had to be filed no later than August 8, 2016. However, a properly executed Micro Entity Status Certification was not filed until August 29, 2017. The fee paid on August 8, 2016 cannot be paid in the micro entity amount absent a proper and timely Micro Entity Status Certification filed on or before that date. Therefore, the fee was not timely paid in the micro entity amount.

### **Petition Under 37 CFR 1.137(a)**

The application became abandoned on August 3, 2013, for failure to timely and properly respond to the final Office action mailed on April 2, 2013, which set a three (3) month shortened statutory period for reply. On October 2, 2013, an amendment after final rejection was filed, accompanied by a request for a three (3) month extension of time in accordance with 37 CFR 1.136(a) and payment of the fee in the micro entity amount. However, the Certification of Micro Entity Status filed October 2, 2013 was signed by only one of the joint inventors and was therefore not effective. Therefore, the extension of time fee payment of \$150 filed October 2, 2013, was only sufficient for a 1 month extension of time at the small entity amount. On October 18, 2013, however, an Advisory Action Before the Filing of an Appeal Brief was mailed, stating that the reply filed on October 2, 2013, fails to place the application in condition for allowance. Notice of Abandonment was mailed on February 7, 2014. On April 7, 2014, a paper styled as a petition to revive the application was filed, accompanied by a Request for Continued Examination. On April 30, 2014, the petition was dismissed. On February 6, 2016, a renewed petition was filed. On March 7, 2016, the renewed petition was dismissed. On August 22, 2016, a renewed petition was filed. On June 29, 2017, the petition was dismissed.

As noted in the decision mailed June 29, 2017, the petition is untimely. As noted above, a three (3) month extension of time was required to make the reply a timely. The proper fee for a three (3) month extension of time was not submitted, The two (2) month extension of time submitted with the petition on August 8, 2016 was not a sufficient extension of time and not properly filed with a valid certification of micro entity status. Therefore, the petition is untimely.

**Mail Stop Petition**

Commissioner for Patents

P.O. Box 1450

Alexandria, VA 22313-1450

FAX (571) 273-8300

NOTE: If information or assistance is needed in completing this form, please contact the Office of Petitions at (571) 272-3282.

The above-identified application became abandoned for failure to file a timely and proper reply to a notice or action by the United States Patent and Trademark Office. The date of abandonment is the day after the expiration date of the period set for reply in the Office notice or action plus any extensions of time actually obtained.

**APPLICANT HEREBY PETITIONS FOR REVIVAL OF THIS APPLICATION.**

NOTE: A grantable petition requires the following items:

- (1) Petition fee;
- (2) Reply and/or issue fee;
- (3) Terminal disclaimer with disclaimer fee – required for all utility and plant applications filed before June 8, 1995, and for all design applications; and
- (4) Statement that the entire delay was unintentional.

**1. Petition fee**

Small entity fee \$ \_\_\_\_\_ (37 CFR 1.17(m)). Applicant asserts small entity status. See 37 CFR 1.27.

Undiscounted fee \$ \_\_\_\_\_ (37.CFR.1.17(m)).

**2. Reply and/or fee**

A The reply and/or fee to the above-noted Office notice or action in the form of

\_\_\_\_\_ (identify the type of reply):

has been filed previously on \_\_\_\_\_.

is enclosed herewith.

B The issue fee and publication fee (if applicable) of \$ \_\_\_\_\_

has been paid previously on \_\_\_\_\_.

is enclosed herewith.

This collection of information is required by 37 CFR 1.137(a). The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11, 1.14 and 41.6. This collection is estimated to take 1 hour to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: **Mail Stop Petition, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

*If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.*

**PETITION FOR REVIVAL OF AN APPLICATION FOR PATENT  
ABANDONED UNINTENTIONALLY UNDER 37 CFR 1.137(a)**

Page 2 of 2

**3. Terminal disclaimer with disclaimer fee**

- Since this utility/plant application was filed on or after June 8, 1995, no terminal disclaimer is required.
- A terminal disclaimer (and disclaimer fee (37 CFR 1.20(d)) of \$ \_\_\_\_\_) disclaiming the required period of time is enclosed herewith (see PTO/SB/63).

**4. STATEMENT:** The entire delay in filing the required reply from the due date for the required reply until the filing of a grantable petition under 37 CFR 1.137(a) was unintentional. [NOTE: The United States Patent and Trademark Office may require additional information if there is a question as to whether either the abandonment or the delay in filing a petition under 37 CFR 1.137(a) was unintentional. (MPEP 711.03(c), subsections (III)(C) and (D)).]

**WARNING:**

Petitioner/applicant is cautioned to avoid submitting personal information in documents filed in a patent application that may contribute to identity theft. Personal information such as social security numbers, bank account numbers, or credit card numbers (other than a check or credit card authorization form PTO-2038 submitted for payment purposes) is never required by the USPTO to support a petition or an application. If this type of personal information is included in documents submitted to the USPTO, petitioners/applicants should consider redacting such personal information from the documents before submitting them to the USPTO. Petitioner/applicant is advised that the record of a patent application is available to the public after publication of the application (unless a non-publication request in compliance with 37 CFR 1.213(a) is made in the application) or issuance of a patent. Furthermore, the record from an abandoned application may also be available to the public if the application is referenced in a published application or an issued patent (see 37 CFR 1.14). Checks and credit card authorization forms PTO-2038 submitted for payment purposes are not retained in the application file and therefore are not publicly available.

## Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

**STATEMENT OF UNINTENTIONAL DELAY**

The entire delay in filing the required reply from the due date for the required reply of the Office Action dated April 2, 2013 and/or Advisory Action dated October 18, 2013 and/or subsequent Abandonment dated February 7, 2014 until the filing of a grantable petition under 37 C.F.R. §1.137(b) was unintentional.

There has been active work to revive the application with multiple prior attempts unsuccessful due to unintentional results. There have been periods of time spend with communications, negotiations as well as time spent for response or various replies. The actions of the Applicants/joint inventors to continue the project and this application of patent forward have went/continued with diligence.

Both Applicants/joint inventors desire to revive the application and continue its prosecution to a final grant state.

Respectfully submitted,

37 CFR 1.183 - SUSPENSION OF RULES - August 8, 2016**

**UNDER**

**37 CFR 1.181 - PETITION TO THE COMMISSIONER**

Sir/ Madam:

This Request for Reconsideration is submitted in response to the various petition and certification decisions ruled June 29, 2017 in the above-identified patent application.

All petitions active for this application are requested renewed reconsideration except, with rights reserved, Applicants'/joint inventors' petitions for **37 CFR 1.48 - CORRECTION OF INVENTORSHIP** and **37 CFR 1.26 - REFUND**.

Two petitions and one certification in this request have attached to and included herein form generated documents supplied, specifically those of:  
**37 CFR 1.137(a) - REVIVAL OF ABANDONED APPLICATION (PTO/SB/64),  
37 CFR 1.114 - REQUEST FOR CONTINUED EXAMINATION (PTO/SB/30) and 37 CFR 1.129 - CERTIFICATION OF MICRO ENTITY (PTO/SB/15A).**

Applicant Guymon appreciates the United States Patent And Trademark Office's position on the protection and preservation of the rights of the Inventor. Applicant, being fair and honest in seeking a resolution to this application's inventorship believes that dedicated work and commitment of an Inventor should be known, valued and appreciated. Applicant believes that the ever demanding bearing of fairness and equality of the Office helped to facilitate communication and understanding among the joint inventors of this application to relieve conflict and further progression of this application.

Applicant Guymon, acting in capacity as he believed true and proper as a representative according to 37 C.F.R. 1.137 of both Applicants/joint inventors. Unaware of the possibility of petition for rule suspension 37 C.F.R. 1.183 until the later part of 2016, file such petition for both Applicant's benefit for the application's continued prosecution, and, in regard to inventor correction, filed such petition in depth and in a procedurally prudent manner. All of Applicant's past actions and prior correspondence had paperwork and fees accepted for various petition filings making Applicant believe said prosecution was in compliance of all laws and statues, believing additionally that Micro Entity status was obtained for this application as fees were accepted without denial of the Office.

With past communications between Applicant Guymon and Attorney Douglas I. Wood on or about October 2014 and then again with Mr. Wood and his presented supervisor at the time Cassandra Banks on or about June 2016, Applicant, with said communication's details of dates, times and extension of phone noted, on the advice of Attorney Wood and Supervisor Banks worked through the inventorship process defining what an inventor was and how conception and evidence of conception is used to determine inventorship. Delay's where Applicant Litsey did not participate was because the confirmation of inventorship was not clear. It is believed or thought to be now that both parties have in their possession evidence of conception of the inscribed invention and that such claims support that thereof. Therefore, based on belief of the said sure and proper evidence each Applicant/joint inventor maintains, inventorship to both Applicants can be applied.

Previous petition decisions by The United States Patent And Trademark Office in regard to inventor's rights and those rights extinguished allowed time for Applicants/joint inventors to come together and finally work out their differences and misunderstandings such that, based on each Applicant's/joint inventor's declaration of possession of said items that, as they each believe to be true and valid items of support towards the amended claims set 1-4, that each Applicant/joint inventor agrees that with such items, unique, original and supportive of idea conception in the said invention that the claims, as written first, amended and expected to be continually written in the future and are materials of evidence that supports a conceive idea or ideas perpetrated in the claim set as written or amended.

Further review of said material items of each Applicant/joint inventor of each by the other and the realization by each or the other that the materials due in fact support the intricate portions or sub-portions of the in-depth descriptions and details of layout that could be done, as with most software/electronic device inventions, especially that of electronic documents and specific processes, method's or systems of generation and said generation's content's of said documents other attributes that, in the case of the inscribed invention exist. However, at this

time, each Applicant/joint inventor feels satisfied that the other's portion of conception fits into the overall apparatus / electronic document and said documentation methods and inscribed systems such that both Applicant/joint inventors are satisfied with the other's declaration and physical ownership of evidence of invention conception.

During such time where co inventor Litsey could not submit signature, in respect obedience to 18 U.S.C. 1001 or, where Applicant Litsey felt he was a co-inventor, a written statement of misjoinder, both applicants were at stand still. During this unprosecutable time of application, Applicant Guymon followed patent rule and statute law as he felt fair, proper and honest and took, because of the only limited avenue available to Applicant Guymon, proper and due process in order to continue the application's examination and/or subsequent revival when a continued examination was not allowed due to an improper reply needed for such. Applicant Guymon, prose, unable to secure legal representation or assistance, with petition 1.183 submission Aug 2016 believed such actions were finally those needed or required in order for the United States Patent And Trademark Office to allow or accept continued application prosecution. Applicant agrees with the Office's objection of inventorship's rights distinguishment possibility, and on guidance from Douglas Wood, Attorney, advising since 2014 on the process that could be taken for the illumination of the application's problem, to wit correction of inventorship if signature of joint applicant is unattainable, proceeded accordingly.

Applicants/joint inventors, with submission of this renewed petition, request Applicant Guymon's prior 1.183 petition grant and ultimately allow grant of other petitions, having said petitions for the good of the Application and all co-inventors. Both Applicants/joint inventors are, as both Applicants/joint inventors desired, believed to be true, now, in support of the combined submissions of Certification of Micro Entity, Request Of Continued Examination, Revival Of Application petitions and included Extensions Of Time petitions, specifically that of Applicant Guymon's Extension Of Time petition submitted August 2016.

With the now submitted documents/paperwork showing both applicant's/joint inventors desired intentions and stated past believed of operation, procedure or other action, Applicants/joint inventors request renewed petition consideration of Applicant's 1.183 petition, having said 1.183's acceptance and grant supporting totally supporting both Applicant's/joint inventor's, having Applicant's 1.48 petition previously filed not of issue or part of this 1.183 renew consideration process and further having Applicant's 1.48 petition left dismissed without further Applicant prosecution.

Further, Applicants/joint inventors, renewing petitions under 1.181, request further review and involvement of the Director Of The United States Patent And Trademark Office.

Neither applicant has entered or otherwise submitted or practiced upon the Office any false, malice or otherwise incorrect, misleading, or inequitable conduct in any submission, correspondence or other action or statement. Applicants/joint inventors have had a difficult time in working through the definitions, requirements or other prerequisites of the prosecution of this application's invention and its difficult and in-depth intricate details and said details implementation. Further, with acceptance and acknowledgement and whole hearted compliance

in 18 U.S.C. 1001, time durations have been extended with delays, unintentional and unable to avoid, only as long as required for proper representation and procurement of prosecution and petition allowances.

### Renewed Petition Request

Applicants/joint inventors John Lewis Guymon Jr and Douglas Scott Litsey come now, in agreement, respectfully requesting renewed reconsideration of previously denied 'Certification Of Micro Entity' and dismissed petition's for 'Suspension Of Rules', 'Extension Of Time', 'Revival Of Abandoned Application' and 'Request For Continued Examination' and to have said items considered timely, acknowledged, and accepted as a matter of record.

Below is an outline overlay of the line items of Applicant's request of the mailed decision dated June 29, 2017.

- 1) 1.129 Certification Of Micro Entity
- 2) 1.137(a) 2 Revive D
- 3) 1.48(a) 3 D
- 4) 1.114 RCE
- 5) 1.127 5 Refund D
- 6) 1.136 Time THIS IS THE PROOF ONE
- 7) 1.183 1 My last is wood 1 D

### Suspension of Rules Just

Applicant requests 1.183 waiver of rules on items 1,2,4,5,6 above and not non item 3. Ultimately if a person feels they are not an inventor he/she cant sign any document. If they feel he/she is of equal in inventorship they would not agree in the deletion of their inventor status and would demand a statement of compensation, right or other acknowledgement. Either way a signature becomes unavailable due to penalty or non-agreement to deletion, which forced a detailed look at if or if not, based on evidence of conception, which for Litsey was small and fine in detail, was an amount that would or would not verify conception. Co-inventor Guymon, having a greater share of conception, made it difficult to understand Litsey's portion.

Litsey was added at the time because he had worked on things that were both routine procedure and creative thought. The area of confusion was on the conception of certain security measures allowed in the electronic document, and Both needed to understand such areas to determine if such measures are conceptually used, as location and position in the document is key to conception of security, and the types of measures in such locations.

These areas are in a sense dimensionless and therefore brings both Applicant's contribution into overlap because both could conceive areas and the information that could be placed there.

Conception becomes clear when itemization is done to the elements of the invention. In other words, the combinations of security measures in different locations and the security data

that is in those locations generate a platform unique to the document, the invention embodiments are each one unique, original and different possibly from any other.

The question arises as to whether or not this multi-directional system was part of the early prototypes or not, as the security of the invention, a product of security locations and data values, rises exponentially.

As Litsey joined in on the understanding and use of the invention the invention took on a greater power, as more is greater than less. The ultimate question that took so long for the two to understand was that of where the obvious use of data in sections to bind other sections existed or not. The answer is YES, and as sections became, NO. Final matrix defining documents would show both to be true and thus require both parties to bring documentation together. At this time both inventors, having documents, pages, notebooks and/or other items of physical evidence are these inscribed matrix portions needed to build the one model from the two data sets.

It became very exhausting for both to the point that definition clarity was needed. A test became about that presented even further deadlock of the inventors - the presentation of said material items before during and after the two believed in their credit and reward. Because Guymon has majority Litsey had burden to show the minor contribution so that said contribution can then be regarded. Over time understanding of inventorship became known. Simple enough, if a person is an inventor they share equally in the ownership and control of the invention. Guymon has and always has had no problem allowing Litsey to be represented as an inventor but needed the eventual proof to verify for everyone's protection. The question of ownership was not clear to Litsey early on in the delayed time period from October 2013 until recently. As such, both parties needed from the other substantial guarantee as of to part, Applicant Guymon's need of Applicant Litsey's confirmed physical evidence and Litsey's need of belief that his work/contribution were of value and would be rewarded. Mediation, occurring during the entire period of time that has been taken to allow both parties to come to the point of agreement as to the other's physical ownership of connectional documentation, allowed both parties to agree that each could be listed as a co-inventor. With the paralleled belief and agreement as written both parties believe each has such said documentation of various conceived portions of the invention's areas. During this time period, however, Applicant Guymon had no other recourse but to correct the inventorship or get Litsey to join in participation of prosecution.

Both parties desire revival and continued examination, and desire both to have happened long ago but were unable to obtain. Applicant Guymon could not advance prosecution because of Office decisions and Litsey was unable as well as he held minor portions of reply responsibility and more importantly was never directly allowed prosecution, specifically with reply's and office communications. Guymon and Litsey desired further progress of the application, as presently presented in the documents associated with this reconsideration, however only Guymon was able to bring prosecution, either because of position in correspondence between the office and inventors/applicants or because Guymon, acting in a representative position of both as Litsey was an agent of Guymon's DBA organization and therefore obligated for the most part to generate and work the prosecution.

Time was extensive due to the inventions multi-dimensional generation qualities. The great work of Litsey in the authoring and other editing works of Litsey was in depth, abstract and well placed. Such work needed complete review and analysis as to its type and value/originality to the overall invention and took time for evaluation as the work was of great value, that which separated that from the secretarial works of others.

No real concept of inventorship was known by anyone on the team and therefore the rules for the application of patent was loosely disciplined regarding inventorship, having Litsey's work noting. However as time continued both parties began to suffer consequences that came with prosecution, making Guymon become strict with beliefs and such beliefs documentation. Initially Guymon presented an amicable desire to include Litsey as an inventor, as such defined when listed on the application of patent, but became more assertive as time continued having the issue create stalemate in the applications prosecution. Neither party desired abandonment or the complete halt of examination and such but neither could control such cases. Applicant Guymon proceeded with correction of inventorship as suggested be done by Attorney Douglas Wood during multiple phone conversations on or around 2014 or so. Further, during days before the first submission Guymon, through phone conversations with Wood and supervisor Banks on or around 2016, having Guymon in possession of documentation of said communication details.

Applicant Guymon proceeded as only he could having a position of catch 22, forcing the USPTO in a position such as it has been placed in and therefore dismissing petitions. Guymon however attempted to clear the stalemate positions and get the application at least revived and continually examined, a desire of both Applicant's/joint inventors.

The correction of inventorship was not a desire of either Applicant but was the only path or avenue that the United States Patent And Trademark Office's rules would have allowed for revival and continued examination to be granted.

Neither applicant was involved in inequitable conduct but both were upset as such with the continued time marching on occurring event of the application of patent and its 20 year period of protection.

Applicant Guymon, having more involvement with the prosecution was more inclined to obtain advise and did such from legal council who informed Guymon of the importance of the inventor listing, making Guymon more determined to get it right as that is then the only way its enforceable, and Applicant Guymon did not care either way with regard to the recognition as he did for the patent application enforcement, having such protect both parties in the end when inventorship could became finally determined.

Applicant Litsey became under the understanding and belief that his rights and ownership and overall contribution was becoming to nothing as his understanding and ultimate control of rewarded compensation was not clear or was not in his power or control, having Guymon the party of such and ultimate decision.

The ultimate confusion and overall belief of dominance and power became very clouded, murky and unable to be conceived of by either party and the necessary thorough analysis and

judgment became necessary, with time and inability to properly prosecute increasing until final point of determination or agreement which both parties believe they have determined.

Believe us, things got heated, depressed and ultimately just sad. The USPTO, having an outside perspective view interprets such as highly contested, a perceived position that is not agreed to by either Applicant Guymon or Litsey, forcing a coming to conclusion the agreed joint inventorship position.

During this interim stage the issue of certification of Micro Entity, a belief of both Applicant's/Joint inventors has evolved into the condition where fees are contested paid due to small entity/micro entity determinations. Having both parties support the and be of Micro Entity certification, fees paid were never disagreed to or upon but have been rejected nevertheless. Both applicants desire believe and ask respectfully that Micro Entity be certified.

Further, Attorney Wood presents in his decision that the Extension Of Time petition filed August 8, 2016 was untimely. Applicant's/joint inventors assert that this petition was paid appropriately within proper time limits with detail of date to be that to suggest and imply thereof, having the fees submitted in accordance to validly.

All of this, as presented in Applicant Guymon's Declaration in Support of Petition 1.183, pages 35 through 40 presents more than persuasive proof that the circumstances are extraordinary, specially because of the nature of the invention and further shows that it is justifiable, just and a decision that justice would render in regard to allowing the 1.183 petition, one that was needed during earlier prosecution time periods, having said petition one that should be granted for all pending petitions except the one that both Applicants no longer desire prosecuted, that of the correction of inventorship 1.48.

All other petitions, either earlier with rule suspension or now/later with both Applicant/joint inventor support are requested, by both Applicant's/joint inventors, having all desired, considered and personally administered to be timely and in compliance to rules and regulations accordingly.

Additionally, in regard to the RCE petition of 2014, one that both Applicants/joint inventors desire and believe is still of consideration and possible grant, the issue of a non-compliance reply was raised as the claims submitted were believed to be that which would be in compliance is included within, having only the original 4 claims a part.

Finally, as it is believed to have been explained with the above, the belief and further statement of both Applicants/ joint inventors, is that the entire period of time of delay was unintentional, having said included statement attached to and included herein with Applicants/joint inventor's August 29 2017 submission.

Finally, the petition for refund submitted before because something needed to make sense with regard to monies paid that may or should not have been is not of issue to either Applicant/joint inventor if other said petitions follow order and progression as desired and otherwise stated.

In summary, having this situation a bit unique and agreed to be in great detail, Applicant's joint inventors submit this request for review under 1.181 so that the Director can assist in an overall determination and decision appropriately. Non-equivocally, both Applicants/joint inventors, with this unique set of circumstances, extraordinary believed, encourage review by as many of those reviewers such that it be known and transparent that the Applicant's/joint inventor's were diligent in their actions, those, done, without deceptive intent.

**Request for Reconsideration timely filed within extended five (5) month deadline.**

Applicant Guymon desired and believe to have requested an extension of time of three (3) months as part of the Request For Reconsideration filed August 8, 2016. Upon later review Applicant realized multiple typographical errors in a non-edited draft extension of time petition filed misinforms the Office of the said extension's length of time. A correct petition for an extension of time should have stated a three (3) month extension length as indicated with the payment of fees made in the amount of \$350 from the Applicant's August 8, 2016 total fee payment of \$590. Applicant apologizes for the petition document's non clarity and Office's ultimate misunderstanding of the extension's length of time requested.

Applicant Guymon, under the impression and believing he had specifically presented the extension of time details within the August 2016 reconsideration request, kindly ask the Office to consider the extension request proper based on the merits of Applicant's mention of the following five (5) key points:

- 1) The extension of time of length three (3) months.
- 2) Specific dates of due reply's.
- 3) Specific dates of extended reply.
- 4) Extended deadline of five months.
- 5) The included fee for a three (3) month extension

Applicants/joint inventors respectfully ask that the Office grant the extension based on consideration the above mentions and not on the incorrect petition filed for several reasons:

- 1) The Extension Of Time petition that was part of the Request For Reconsideration was to be that of a three (3) month based as indicated in the reconsideration's attachment list.
- 2) The information in the incorrect extension of time petition was in itself conflicting, indicating a possible non-edited unapproved document generation and subsequent filing. With all correspondence from Applicants dated the day signed and submitted, the petition document shows to be incomplete and invalid as the said document date, written within the document as well as part of the document's filename, is different than it's August 8, 2016 submission date.

3) The information on the petition states a payment of only \$100 which is an amount different than that stated paid, discuss or otherwise referenced by Applicants/joint inventors.

4) With Micro Entity status assumed by Applicants/joint inventors throughout the process as well as written within the petition, the Micro Entity fee structure was specifically referenced giving indicating of a three (3) month extension fee amount \$350 that more closely aligns with the amount that was eventually submitted as part of Applicant Guymon's August 8, 2016 fee payment total of \$590. Micro Entity fees for petitions of extensions of time are appreciably half of what they are for small entity, having Applicant take full notice of time and it's reflective monthly based penalty costs and savings accordingly.

As with payment of a fee for an extension of time petition, 37 C.F.R. §1.136(a)(2) states, *'(2) The date on which the petition and the fee have been filed is the date for purposes of determining the period of extension and the corresponding amount of the fee. The expiration of the time period is determined by the amount of the fee paid.'*

Applicants/joint inventors respectfully request the USPTO find the previous correspondence timing filed within the extended five (5) month August 8, 2016 deadline having Applicant Guymon believing the fee of \$350 for a three (3) month extension (Micro Entity) was paid.

Having it presumed at the time and, now hopefully certified Micro Entity status as the basis for fee calculation, Applicants/joint inventors respectfully ask the office to see the Applicants'/joint inventors' true intent, desire and belief in the requested extension of time for a three (3) month time period.

Applicants/joint inventors respectfully request the USPTO find the previous correspondence timing filed within the extended five (5) month August 8, 2016 deadline having Applicant Guymon believing the fee of \$350 for a three (3) month extension (Micro Entity) was paid.

#### **Statement of Unintentional delay**

Attached to this renewed petition request is the combined Statement Of Unintentional Delay from both Applicants/joint inventors.

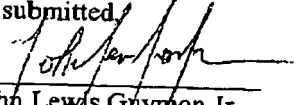

#### **Request For Continued Examination (RCE)**

Applicants/joint inventors have submitted a properly signed Request For Continued Examination that includes all Applicant's/joint inventor's signatures and a reply with amended/included claim set 1-4 that should put the RCE into compliance.

#### **Micro Entity status**

Applicants/joint inventors declare the application's Micro Entity status and further declare that with any and all previous correspondence the application was of or qualified for Micro Entity status and was under the impression based on replies from the Office that the Application was allowed Micro Entity status. Applicants/joint inventors respectfully asks for the petition's office certification of Micro Entity status where applicable.

With the previous true statements made by Applicants/joint inventors of Micro Entity eligibility and the currently enclosed and attached Micro Entity Certification forms from both Applicants/joint inventors, it is respectfully asked that the office allow and issue Micro Entity Certification status for current as well as previous fee payment events.

Respectfully submitted,

Doc Code: PET.OP

Document Description: Petition for Review by the Office of Petitions

PTO/SB/64 (07-09)  
Approved for use through 07/31/2012. OMB 0651-0031  
U.S. Patent and Trademark Office; U.S. DEPARTMENT OF COMMERCE

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

**PETITION FOR REVIVAL OF AN APPLICATION FOR PATENT  
ABANDONED UNINTENTIONALLY UNDER 37 CFR 1.137(b)**

Docket Number (Optional)

First named inventor: John Lewis Guymon Jr

Application No.: 12/316699

Art Unit: 2494

Filed: December 15, 2008

Examiner: Kaveh Abrishamkar

Title: Securable Independent Electronic Document

Attention: Office of Petitions  
Mail Stop Petition  
Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450  
FAX (571) 273-8300

NOTE: If information or assistance is needed in completing this form, please contact Petitions Information at (571) 272-3282.

The above-identified application became abandoned for failure to file a timely and proper reply to a notice or action by the United States Patent and Trademark Office. The date of abandonment is the day after the expiration date of the period set for reply in the office notice or action plus any extensions of time actually obtained.

**APPLICANT HEREBY PETITIONS FOR REVIVAL OF THIS APPLICATION**

NOTE: A grantable petition requires the following items:

- (1) Petition fee;
- (2) Reply and/or Issue fee;
- (3) Terminal disclaimer with disclaimer fee - required for all utility and plant applications filed before June 8, 1995; and for all design applications; and
- (4) Statement that the entire delay was unintentional

**1. Petition Fee**

Small entity-fee \$ 850 (37 CFR 1.17(m)). Application claims small entity status. See 37 CFR 1.27.

Other than small entity-fee \$ \_\_\_\_\_ (37 CFR 1.17(m))

**2. Reply and/or fee**

A. The reply and/or fee to the above-noted Office action in the form of Claims 1-4 (3 pages) (identify type of reply):

- has been filed previously on \_\_\_\_\_.
- is enclosed herewith.

B. The issue fee and publication fee (if applicable) of \$ \_\_\_\_\_.

- has been paid previously on \_\_\_\_\_.
- is enclosed herewith.

[Page 1 of 2]

This collection of information is required by 37 CFR 1.137(b). The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 1.0 hour to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Mail Stop Petition, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

PTO/SB/84 (07-09)  
Approved for use through 07/31/2012. OMB 0661-0031  
U.S. Patent and Trademark Office, U.S. DEPARTMENT OF COMMERCE

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number

3. Terminal disclaimer with disclaimer fee

- Since this utility/plant application was filed on or after June 8, 1995, no terminal disclaimer is required.
- A terminal disclaimer (and disclaimer fee (37 CFR 1.20(d)) of \$ \_\_\_\_\_ for a small entity or \$ \_\_\_\_\_ for other than a small entity) disclaiming the required period of time is enclosed herewith (see PTO/SB/83).

4. STATEMENT: The entire delay in filing the required reply from the due date for the required reply until the filing of a grantable petition under 37 CFR 1.137(b) was unintentional. [NOTE: The United States Patent and Trademark Office may require additional information if there is a question as to whether either the abandonment or the delay in filing a petition under 37 CFR 1.137(b) was unintentional (MPEP 711.03(c), subsections (III)(C) and (D)).]

**WARNING:**

Petitioner/applicant is cautioned to avoid submitting personal information in documents filed in a patent application that may contribute to identity theft. Personal information such as social security numbers, bank account numbers, or credit card numbers (other than a check or credit card authorization form PTO-2038 submitted for payment purposes) is never required by the USPTO to support a petition or an application. If this type of personal information is included in documents submitted to the USPTO, petitioner/applicants should consider redacting such personal information from the documents before submitting them to the USPTO. Petitioner/applicant is advised that the record of a patent application is available to the public after publication of the application (unless a non-publication request in compliance with 37 CFR 1.213(a) is made in the application) or issuance of a patent. Furthermore, the record from an abandoned application may also be available to the public if the application is referenced in a published application or an issued patent (see 37 CFR 1.14). Checks and credit card authorization forms PTO-2038 submitted for payment purposes are not retained in the application file and therefore are not publicly available.

**Amendments w/Reply in re to Final Office Action of April 2, 2013**

Sir/ Madam:

Applicants/joint inventors submit this amendment, signed by both Applicants/joint inventors, with the included attached claims 1-4 to place the application in condition for allowance.

**SPECIFICATION:**

Specifications not changed.

**CLAIMS:**

Amended and incorporated as separate document.

**DRAWINGS:**

Drawings not changed.

**REMARKS:**

In response to the Office Action dated April 2, 2013, Application presents the following remarks: Applicants/joint inventors has rewritten claims (#1 thru #4) in a most diligent manner as to define the electronic document apparatus more particularly and distinctly so as to overcome the technical objections raised in the Office Action United States Patent and Trademark Office, and define, over prior art, the ability of patent for the Securable Independent Electronic Document.

Applicants/joint inventors submits the updated claims for office review. Applicants/joint inventors are unsure if the claims, as they are submitted, are in valid form and compliance with USPTO policy.

Further, applicants have, with due diligence, done their best to facilitate the correct understanding in the submitted changes of this reply. Applicants/joint inventors have not understood the previous office actions until lengthy discussion with the examiner. Applicants/joint inventors are in need of assistance with regard to writing the claims and submits this reply and included claims for review and, if needed, requests assistance in drafting the claims or changes to the claims to bring them into compliance.

Applicants/joint inventors have not changed the specification or any drawings at this time. Only the claims have been updated in this amendment/reply.

In regard to the Office Action's section 'DETAILED ACTION',

paragraph 1, 'This Action ...'

1. Applicants/joint inventors submitted a reply to the Office Action mailed March 6, 2012 on September 6, 2012. A further communication from the USPTO office, dated November 27, 2012, titled 'Notice of Non-Compliant Amendment' was answered by applicant on December 13, 2012. Applicants/joint inventors believes the latest Office Action from the USPTO, dated April 2, 2013, is the latest action and is in response to the September 6, 2012 reply by Applicants.

paragraph 2, 'Claims 1-4 are ...'

2. Applicants/joint inventors makes note of the claims as they are numbered, claims 1-4.

In regard to the Office Action's section 'Response to Arguments',

paragraph 3, 'Applicant's arguments filed ...'

3. Applicants/joint inventors acknowledges the filing date of the last reply to be September 6, 2012 and further December 13, 2012 for corrections to said filing.

In regard to the Office Action's section 'Claim Objections',

paragraph 4, 'The Applicant does ...'

4. Applicants incorrectly created claims 1-4 with regard to said 'means' and has updated claims 1-4 in this reply. Applicant is not invoking 112 6th paragraph, as Applicants believes, as it does not apply.

paragraph 5, 'Therefore, the...'

5.

In regard to the Office Action's section 'Claim Objections',

paragraph 6, 'Claims 1-4 objected ...'

6. Applicants has revised the claims accordingly.

In regard to the Office Action's section 'Claim Rejection – 35 USC § 112', paragraph 7, 'The following ...'

7.

paragraph 8, 'Claims 1-4 ...'

8. Applicants has revised the claims accordingly.

paragraph 9, 'Furthermore, ...'

9. Applicants has revised the claims accordingly.

In regard to the Office Action's section 'Conclusion', paragraph 10, 'THIS ACTION ...'

paragraph 11, 'A shortened statutory ...'

paragraph 12, 'Any inquiry ...'

Applicants/joint inventors has talked with examiner by phone. Discussion with regard to the actual invention and further to some changes that would bring the claims into compliance. Applicants/joint inventors have had a difficult time in confirming the correct language of the claims and has reached the filing deadline; Applicants submits the changes to the claims that hopefully corrects the language and brings the claims into compliance. (Please see main remarks section above.)

paragraph 13, 'If attempts ...'

paragraph 14, 'Information regarding ...'

#### CONCLUSION:

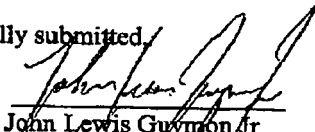

For all the above reasons, Applicants/joint inventors submits that the claims are now in proper form as he has been able to understand they should be, and that the claims all define the ability for patent over prior art. Therefore Applicants/joint inventors submit that this application is now in condition for allowance which action they respectfully solicit.

**Conditional Request for Constructive Assistance**

Applicants/joint inventors have amended the claims of this application to the best of their knowledge and ability so that they (hopefully) are proper, definite, and define novel structure which is also unobvious. If for any reason this application is not believed to be in full condition for allowance, Applicants/joint inventors respectfully requests constructive assistance and suggestions of the Examiner pursuant to M.P.E.P. §2173.02 and §707.07(j) in order that the undersigned can place this application in allowable condition as soon as possible and without the need for further proceedings.

Respectfully submitted,

8/26/17

Applicants: John Lewis Guymon Jr / Douglas Scott Litsey  
Application Title: Securable Independent Electronic Document  
Examiner/GAU: Kaveh Abrishamkar

**CLAIMS as amended re Request for Continued Examination**

1. An electronic document for secured information exchange supporting independence of specific platform and of nonessential party, tangibly embodied in a computer readable storage medium, the securable independent electronic document comprising:

a normative standard graphical image based container adapted for sectional components, the graphic image sectional component container comprising:

a graphical image sectional component, wherein said image component adapted for storing graphical image data of said graphic image container type,

wherein said component may include encrypted content wherein said encrypted content can be decrypted;

wherein with a set of machine readable instructions in a computer system, said component can be processed in an automated fashion by said computer system, and

wherein if visually perceived by a human user, said component can be interacted upon and processed in a manual fashion by said user; and

a character text sectional component adapted for storing normative standard character text based digital signature formatted data,

wherein with a set of machine readable instructions in a computer system, said component can be processed in an automated fashion by said computer system

wherein if visually perceived by a human user, said component can be interacted upon and processed in a manual fashion by said user;

and, if user specified, additional sectional components wherein said additional components adapted for the storage of any of the following data types:

character text data, said character text comprising scripting text, rich text, markup language text, or other character text, wherein said char text can include one or more of the following:

a character text Uniform Resource Locator (URL),  
encoded data, wherein said encoded data can be of any type or value including encrypted or embedded data of any type including that of the inscribed herein securable independent electronic document type,  
graphic image(s) data,  
raw binary data,  
intrinsic security feature data,  
container based binary encoded digital signature data,  
any other user specified data;

wherein said sectional components include intrinsic security feature data wherein coupling of said sectional component(s) security feature data generates additional intrinsic security feature data

wherein said intrinsic data or said additional intrinsic data can be stored in any one of said sectional component(s),

wherein automated system interfacing as binary file formatted type data in a direct, non-altered, single byte precision original 'incrementally-filed' data handling and storage method, whereby having said char text sectional component encapsulated in said binary document container allows said character text to sustain its original sequential filed data form, and

wherein independent creation and processing of said container from said sectional components' creation and processing, and

wherein integrity enhanced non-associated creation and processing intervention from said sectional components' creation and processing, and

wherein integrity enhanced incorporated security feature information coupling of said sectional components' security check information with other said sectional components' security check information, and

wherein said normative standard graphic image container and said normative standard character text sectional components further allows the electronic document

integrity enhanced intervention and association control of processing and storage from non-desired additional parties,

independent interaction of processing and storage from non-desired additional parties,

independent validation of processing and storage from non-desired additional parties, and

independent processing and storage of said machine readable instruction's computing platform;

2. The electronic document of claim 1, wherein said normative standard character text based digital signature sectional component include signatures of one or more of the following types:

- (i) signature;
- (ii) co-signature;
- (iii) counter-signature.

3. The electronic document of claim 2, wherein said document container further comprises additional user specified binary encoded digital signature sectional components, wherein said binary encoded container based digital signature sectional component(s) include signatures of one or more of the following types:

- (i) signature;
- (ii) co-signature;
- (iii) counter-signature.

4. The electronic document of claim 3, wherein said sectional components include at least one cyclic redundancy check (CRC) value.

This is a Request for Continued Examination (RCE) under 37 CFR 1.114 of the above-identified application. Request for Continued Examination (RCE) practice under 37 CFR 1.114 does not apply to any utility or plant application filed prior to June 8, 1995, or to any design application. See Instruction Sheet for RCEs (not to be submitted to the USPTO) on page 2.

1. **Submission required under 37 CFR 1.114** Note: If the RCE is proper, any previously filed unentered amendments and amendments enclosed with the RCE will be entered in the order in which they were filed unless applicant instructs otherwise. If applicant does not wish to have any previously filed unentered amendment(s) entered, applicant must request non-entry of such amendment(s).

a.  Previously submitted. If a final Office action is outstanding, any amendments filed after the final Office action may be considered as a submission even if this box is not checked.

i.  Consider the arguments in the Appeal Brief or Reply Brief previously filed on \_\_\_\_\_

ii.  Other \_\_\_\_\_

b.  Enclosed

i.  Amendment/Reply

ii.  Affidavit(s)/ Declaration(s)

iii.  Information Disclosure Statement (IDS)

iv.  Other Claims 1-4 (3 pages)

2. **Miscellaneous**

a.  Suspension of action on the above-identified application is requested under 37 CFR 1.103(c) for a period of \_\_\_\_\_ months. (Period of suspension shall not exceed 3 months; Fee under 37 CFR 1.17(i) required)

b.  Other \_\_\_\_\_

3. **Fees** The RCE fee under 37 CFR 1.17(e) is required by 37 CFR 1.114 when the RCE is filed. The Director is hereby authorized to charge the following fees, any underpayment of fees, or credit any overpayments, to

a.  Deposit Account No. \_\_\_\_\_

i.  RCE fee required under 37 CFR 1.17(e)

ii.  Extension of time fee (37 CFR 1.136 and 1.17)

iii.  Other RCE fee \$300 and \$35.56(Micro Entity) paid 4/7/2014

b.  Check in the amount of \$ \_\_\_\_\_ enclosed

c.  Payment by credit card (Form PTO-2038 enclosed)

WARNING: Information on this form may become public. Credit card information should not be included on this form. Provide credit card information and authorization on PTO-2038.

**SIGNATURE OF APPLICANT, ATTORNEY, OR AGENT REQUIRED**

**Publication Information:**

Request Early Publication (Fee required at time of Request 37 CFR 1.219)

**Request Not to Publish.** I hereby request that the attached application not be published under 35 U.S.C. 122(b) and certify that the invention disclosed in the attached application has not and will not be the subject of an application filed in another country, or under a multilateral international agreement, that requires publication at eighteen months after filing.

**Representative Information:**

Representative information should be provided for all practitioners having a power of attorney in the application. Providing this information in the Application Data Sheet does not constitute a power of attorney in the application (see 37 CFR 1.32). Enter either Customer Number or complete the Representative Name section below. If both sections are completed the Customer Number will be used for the Representative Information during processing.

This section allows for the applicant to claim benefit of foreign priority and to identify any prior foreign application for which priority is not claimed. Providing this information in the application data sheet constitutes the claim for priority as required by 35 U.S.C. 119(b) and 37 CFR 1.55(a).

|                    |         |                                 |                                                               |
|--------------------|---------|---------------------------------|---------------------------------------------------------------|
| Application Number | Country | Parent Filing Date (YYYY-MM-DD) | Priority Claimed                                              |
|                    |         |                                 | <input type="radio"/> Yes <input checked="" type="radio"/> No |

Additional Foreign Priority Data may be generated within this form by selecting the Add button.

**Assignee Information:**

Providing this information in the application data sheet does not substitute for compliance with any requirement of part 3 of Title 37 of the CFR to have an assignment recorded in the Office.

**Assignee 1**

If the Assignee is an Organization check here.

This collection of information is required by 37 CFR 1.76. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 23 minutes to complete, including gathering, preparing, and submitting the completed application data sheet form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

**PETITION FOR REVIVAL OF AN APPLICATION FOR PATENT  
ABANDONED UNINTENTIONALLY UNDER 37 CFR 1.137(b)**

Docket Number (Optional)

First named inventor: John Lewis Guymon Jr

Application No.: 12/316699

Filed: December 15, 2008

Art Unit: 2494

Examiner: Kaveh Abrishamkar

Title: Securable Independent Electronic Document

Attention: Office of Petitions  
**Mail Stop Petition**  
Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450  
FAX (571) 273-8300

NOTE: If information or assistance is needed in completing this form, please contact Petitions Information at (571) 272-3282.

The above-identified application became abandoned for failure to file a timely and proper reply to a notice or action by the United States Patent and Trademark Office. The date of abandonment is the day after the expiration date of the period set for reply in the office notice or action plus any extensions of time actually obtained.

**APPLICANT HEREBY PETITIONS FOR REVIVAL OF THIS APPLICATION**

NOTE: A grantable petition requires the following items:

- (1) Petition fee;
- (2) Reply and/or issue fee;
- (3) Terminal disclaimer with disclaimer fee - required for all utility and plant applications filed before June 8, 1995; and for all design applications; and
- (4) Statement that the entire delay was unintentional

**1. Petition Fee**

- Small entity-fee \$ 850 (37 CFR 1.17(m)). Application claims small entity status. See 37 CFR 1.27.
- Other than small entity-fee \$ \_\_\_\_\_ (37 CFR 1.17(m))

**2. Reply and/or fee**

A. The reply and/or fee to the above-noted Office action in the form of Claims 1-4 (3 pages) (identify type of reply):

- has been filed previously on \_\_\_\_\_.
- is enclosed herewith.

B. The issue fee and publication fee (if applicable) of \$ \_\_\_\_\_.

- has been paid previously on \_\_\_\_\_.
- is enclosed herewith.

This collection of information is required by 37 CFR 1.137(b). The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 1.0 hour to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Mail Stop Petition, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

The PTO did not receive the following listed item(s) \$ 850 (1)

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number

## 3. Terminal disclaimer with disclaimer fee

- Since this utility/plant application was filed on or after June 8, 1995, no terminal disclaimer is required.
- A terminal disclaimer (and disclaimer fee (37 CFR 1.20(d)) of \$ \_\_\_\_\_ for a small entity or \$ \_\_\_\_\_ for other than a small entity) disclaiming the required period of time is enclosed herewith (see PTO/SB/63).

4. STATEMENT: The entire delay in filing the required reply from the due date for the required reply until the filing of a grantable petition under 37 CFR 1.137(b) was unintentional. [NOTE: The United States Patent and Trademark Office may require additional information if there is a question as to whether either the abandonment or the delay in filing a petition under 37 CFR 1.137(b) was unintentional (MPEP 711.03(c), subsections (III)(C) and (D)).]

**WARNING:**

Petitioner/applicant is cautioned to avoid submitting personal information in documents filed in a patent application that may contribute to identity theft. Personal information such as social security numbers, bank account numbers, or credit card numbers (other than a check or credit card authorization form PTO-2038 submitted for payment purposes) is never required by the USPTO to support a petition or an application. If this type of personal information is included in documents submitted to the USPTO, petitioners/applicants should consider redacting such personal information from the documents before submitting them to the USPTO. Petitioner/applicant is advised that the record of a patent application is available to the public after publication of the application (unless a non-publication request in compliance with 37 CFR 1.213(a) is made in the application) or issuance of a patent. Furthermore, the record from an abandoned application may also be available to the public if the application is referenced in a published application or an issued patent (see 37 CFR 1.14). Checks and credit card authorization forms PTO-2038 submitted for payment purposes are not retained in the application file and therefore are not publicly available.

Applicant /Joint Inventor

**Agreement of Inventorship and Rights Acknowledgement**

Comes now John Lewis Guymon Jr and Douglas Scott Litsey having each in their possession evidence of conception of invention of the jointly filed application of patent Serial #12/316699 Securable Independent Electronic Document filed December 15, 2008 with the United States Patent and Trademark Office. Accordingly, with knowledge and understanding of inventorship as/per 35 U.S.C. §115, each Applicant/joint inventor agree as/per 35 U.S.C. §116 that both listed inventors should be allowed equal control in the invention as per 35 U.S.C. §262 to wit: John Lewis Guymon Jr allowed 50% / Douglas Scott Litsey allowed 50%, and the further ownership and rights of assignment of the patent as/per 35 U.S.C. §152 to wit: John Lewis Guymon Jr to own/assign 50% / Douglas Scott Litsey to own/assign 50%.

Both parties enter this agreement in support of the said application of patent's revival from its current state of abandonment and further the application's continued examination prosecution and eventual granting of patent. Accordingly, each Applicant/joint inventor will include their signature in accordance to 37 C.F.R. §1.33(b) in all future correspondence with the United States Patent and Trademark Office.

### **RENEWED PETITION REQUEST FOR RECONSIDERATION OF CERTIFICATION AND PETITION DECISIONS (6/29/2017)**

**- FOR -**

**37 CFR 1.129 - CERTIFICATION OF MICRO ENTITY, October 2, 2013**  
**37 CFR 1.137(a) - REVIVAL OF ABANDONED APPLICATION, February 6, 2016**  
**37 CFR 1.114 - REQUEST FOR CONTINUED EXAMINATION, April 7, 2014**  
**37 CFR 1.136 - PETITION FOR EXTENSION OF TIME - August 8, 2016**

Sir/ Madam:

This Request for Reconsideration is submitted in response to the various petition and certification decisions ruled June 29, 2017 in the above-identified patent application.

Applicant Guymon appreciates the United States Patent And Trademark Office's position on the protection and preservation of the rights of the Inventor. Applicant, being fair and honest in seeking a resolution to this application's inventorship believes that dedicated work and commitment of an Inventor should be known, valued and appreciated. Applicant believes that the ever demanding bearing of fairness and equality of the Office helped to facilitate communication and understanding among the joint inventors of this application to relieve conflict and further progression of this application.

#### **Renewed Petition Request**

Applicants/joint inventors John Lewis Guymon Jr and Douglas Scott Litsey come now, in agreement, respectfully requesting renewed reconsideration of previously denied 'Certification Of Micro Entity' and dismissed petition's for 'Extension Of Time', ' Revival Of Abandoned Application' and 'Request For Continued Examination' and to have said items considered timely, acknowledged, and accepted as a matter of record.

**Request for Reconsideration timely filed within extended five (5) month deadline.**

Applicant Guymon desired and believe to have requested an extension of time of three (3) months as part of the Request For Reconsideration filed August 8, 2016. Upon later review Applicant realized multiple typographical errors in a non-edited draft extension of time petition filed misinforms the Office of the said extension's length of time. A correct petition for an extension of time should have stated a three (3) month extension length as indicated with the payment of fees made in the amount of \$350 from the Applicant's August 8, 2016 total fee payment of \$590. Applicant apologizes for the petition document's non clarity and Office's ultimate misunderstanding of the extension's length of time requested.

Applicant Guymon, under the impression and believing he had specifically presented the extension of time details within the August 2016 reconsideration request, kindly ask the Office to consider the extension request proper based on the merits of Applicant's mention of the following five (5) key points:

- 1) The extension of time of length three (3) months.
- 2) Specific dates of due reply's.
- 3) Specific dates of extended reply.
- 4) Extended deadline of five months.
- 5) The included fee for a three (3) month extension

Applicants/joint inventors respectfully ask that the Office grant the extension based on consideration the above mentions and not on the incorrect petition filed for several reasons:

- 1) The Extension Of Time petition that was part of the Request For Reconsideration was to be that of a three (3) month based as indicated in the reconsideration's attachment list.
- 2) The information in the incorrect extension of time petition was in itself conflicting, indicating a possible non-edited unapproved document generation and subsequent filing. With all correspondence from Applicants dated the day signed and submitted, the petition document shows to be incomplete and invalid as the said document date, written within the document as well as part of the document's filename, is different than it's August 8, 2016 submission date.
- 3) The information on the petition states a payment of only \$100 which is an amount different than that stated paid, discuss or otherwise referenced by Applicants/joint inventors.
- 4) With Micro Entity status assumed by Applicants/joint inventors throughout the process as well as written within the petition, the Micro Entity fee structure was specifically referenced giving indicating of a three (3) month extension fee amount \$350 that more closely aligns with the amount that was eventually submitted as part of Applicant Guymon's August 8, 2016 fee payment total of \$590. Micro Entity fees for petitions of extensions of time are appreciably half of what they are for small entity, having Applicant take full notice of time and it's reflective monthly based penalty costs and savings accordingly.

As with payment of a fee for an extension of time petition, 37 C.F.R. §1.136(a)(2) states, '(2) *The date on which the petition and the fee have been filed is the date for purposes of determining*

***the period of extension and the corresponding amount of the fee. The expiration of the time period is determined by the amount of the fee paid.'***

Having it presumed at the time and, now hopefully certified Micro Entity status as the basis for fee calculation, Applicants/joint inventors respectfully ask the office to see the Applicants'/joint inventors' true intent, desire and belief in the requested extension of time for a three (3) month time period.

Applicants/joint inventors respectfully request the USPTO find the previous correspondence timing filed within the extended five (5) month August 8, 2016 deadline having Applicant Guymon believing the fee of \$350 for a three (3) month extension (Micro Entity) was paid.

**Statement of Unintentional delay**

Attached to this renewed petition request is the combined Statement Of Unintentional Delay from both Applicants/joint inventors.

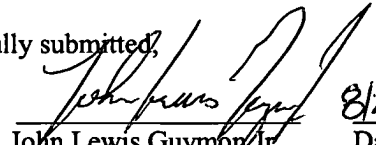

**Request For Continued Examination (RCE)**

Applicants/joint inventors have submitted a properly signed Request For Continued Examination that includes all Applicant's/joint inventor's signatures and a reply with amended/included claim set 1-4 that should put the RCE into compliance.

**Micro Entity status**

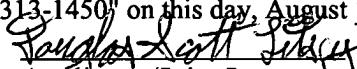

Applicants/joint inventors declare the application's Micro Entity status and further declare that with any and all previous correspondence the application was of or qualified for Micro Entity status and was under the impression based on replies from the Office that the Application was allowed Micro Entity status. Applicants/joint inventors respectfully asks for the petition's office certification of Micro Entity status where applicable.

With the previous true statements made by Applicants/joint inventors of Micro Entity eligibility and the currently enclosed and attached Micro Entity Certification forms from both Applicants/joint inventors, it is respectfully asked that the office allow and issue Micro Entity Certification status for current as well as previous fee payment events.

### STATEMENT OF UNINTENTIONAL DELAY

The entire delay in filing the required reply from the due date for the required reply of the Office Action dated April 2, 2013 and/or Advisory Action dated October 18, 2013 and/or subsequent Abandonment dated February 7, 2014 until the filing of a grantable petition under 37 C.F.R. §1.137(b) was unintentional.

There has been active work to revive the application with multiple prior attempts unsuccessful due to unintentional results. There have been periods of time spend with communications, negotiations as well as time spent for response or various replies. The actions of the Applicants/joint inventors to continue the project and this application of patent forward have went/continued with diligence.

Both Applicants/joint inventors desire to revive the application and continue its prosecution to a final grant state.

**This is a Request for Continued Examination (RCE) under 37 CFR 1.114 of the above-identified application.**  
Request for Continued Examination (RCE) practice under 37 CFR 1.114 does not apply to any utility or plant application filed prior to June 8, 1995, or to any design application. See Instruction Sheet for RCEs (not to be submitted to the USPTO) on page 2.

1. **Submission required under 37 CFR 1.114** Note: If the RCE is proper, any previously filed unentered amendments and amendments enclosed with the RCE will be entered in the order in which they were filed unless applicant instructs otherwise. If applicant does not wish to have any previously filed unentered amendment(s) entered, applicant must request non-entry of such amendment(s).

- a.  Previously submitted. If a final Office action is outstanding, any amendments filed after the final Office action may be considered as a submission even if this box is not checked.
- i.  Consider the arguments in the Appeal Brief or Reply Brief previously filed on \_\_\_\_\_
- ii.  Other \_\_\_\_\_
- b.  Enclosed
- i.  Amendment/Reply
- ii.  Affidavit(s)/ Declaration(s)
- iii.  Information Disclosure Statement (IDS)
- iv.  Other Claims 1-4 (3 pages)

2. **Miscellaneous**

- a.  Suspension of action on the above-identified application is requested under 37 CFR 1.103(c) for a period of \_\_\_\_\_ months. (Period of suspension shall not exceed 3 months; Fee under 37 CFR 1.17(i) required)
- b.  Other \_\_\_\_\_

3. **Fees**

- The RCE fee under 37 CFR 1.17(e) is required by 37 CFR 1.114 when the RCE is filed.  
The Director is hereby authorized to charge the following fees, any underpayment of fees, or credit any overpayments, to
- a.  Deposit Account No. \_\_\_\_\_
- i.  RCE fee required under 37 CFR 1.17(e)
- ii.  Extension of time fee (37 CFR 1.136 and 1.17)
- iii.  Other RCE fee \$300 and \$35.56(Micro Entity) paid 4/7/2014
- b.  Check in the amount of \$ \_\_\_\_\_ enclosed
- c.  Payment by credit card (Form PTO-2038 enclosed)

**WARNING: Information on this form may become public. Credit card information should not be included on this form. Provide credit card information and authorization on PTO-2038.**

**SIGNATURE OF APPLICANT, ATTORNEY, OR AGENT REQUIRED**

This collection of information is required by 37 CFR 1.114. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Mail Stop RCE, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

 Document Description: Certification of Micro Entity Status (Gross Income Basis)

PTO/SB/15A (07-14)

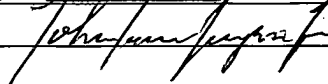

**CERTIFICATION OF MICRO ENTITY STATUS  
 (GROSS INCOME BASIS)**

|                                                                    |                                                                  |
|--------------------------------------------------------------------|------------------------------------------------------------------|
| Application Number or Control Number (if applicable):<br>12/316699 | Patent Number (if applicable):                                   |
| First Named Inventor:<br>John Lewis Guymon Jr                      | Title of Invention:<br>Securable Independent Electronic Document |

The applicant hereby certifies the following—

- (1) **SMALL ENTITY REQUIREMENT** – The applicant qualifies as a small entity as defined in 37 CFR 1.27.
- (2) **APPLICATION FILING LIMIT** – Neither the applicant nor the inventor nor a joint inventor has been named as the inventor or a joint inventor on more than four previously filed U.S. patent applications, excluding provisional applications and international applications under the Patent Cooperation Treaty (PCT) for which the basic national fee under 37 CFR 1.492(a) was not paid, and also excluding patent applications for which the applicant has assigned all ownership rights, or is obligated to assign all ownership rights, as a result of the applicant's previous employment.
- (3) **GROSS INCOME LIMIT ON APPLICANTS AND INVENTORS** – Neither the applicant nor the inventor nor a joint inventor, in the calendar year preceding the calendar year in which the applicable fee is being paid, had a gross income, as defined in section 61(a) of the Internal Revenue Code of 1986 (26 U.S.C. 61(a)), exceeding the "Maximum Qualifying Gross Income" reported on the USPTO Web site at [http://www.uspto.gov/patents/law/micro\\_entity.jsp](http://www.uspto.gov/patents/law/micro_entity.jsp) which is equal to three times the median household income for that preceding calendar year, as most recently reported by the Bureau of the Census.
- (4) **GROSS INCOME LIMIT ON PARTIES WITH AN "OWNERSHIP INTEREST"** – Neither the applicant nor the inventor nor a joint inventor has assigned, granted, or conveyed, nor is under an obligation by contract or law to assign, grant, or convey, a license or other ownership interest in the application concerned to an entity that, in the calendar year preceding the calendar year in which the applicable fee is being paid, had a gross income, as defined in section 61(a) of the Internal Revenue Code of 1986, exceeding the "Maximum Qualifying Gross Income" reported on the USPTO Web site at [http://www.uspto.gov/patents/law/micro\\_entity.jsp](http://www.uspto.gov/patents/law/micro_entity.jsp) which is equal to three times the median household income for that preceding calendar year, as most recently reported by the Bureau of the Census.

**Amendments w/Reply in re to Final Office Action of April 2, 2013**

Sir/ Madam:

Applicants/joint inventors submit this amendment, signed by both Applicants/joint inventors, with the included attached claims 1-4 to place the application in condition for allowance.

**SPECIFICATION:**

Specifications not changed.

**CLAIMS:**

Amended and incorporated as separate document.

**DRAWINGS:**

Drawings not changed.

**REMARKS:**

In response to the Office Action dated April 2, 2013, Application presents the following remarks: Applicants/joint inventors has rewritten claims (#1 thru #4) in a most diligent manner as to define the electronic document apparatus more particularly and distinctly so as to overcome the technical objections raised in the Office Action United States Patent and Trademark Office, and define, over prior art, the ability of patent for the Securable Independent Electronic Document.

Applicants/joint inventors submits the updated claims for office review. Applicants/joint inventors are unsure if the claims, as they are submitted, are in valid form and compliance with USPTO policy.

Further, applicants have, with due diligence, done their best to facilitate the correct understanding in the submitted changes of this reply. Applicants/joint inventors have not understood the previous office actions until lengthy discussion with the examiner. Applicants/joint inventors are in need of assistance with regard to writing the claims and submits this reply and included claims for review and, if needed, requests assistance in drafting the claims or changes to the claims to bring them into compliance.

Applicants/joint inventors have not changed the specification or any drawings at this time. Only the claims have been updated in this amendment/reply.

In regard to the Office Action's section 'DETAILED ACTION',

paragraph 1, 'This Action ...'

1. Applicants/joint inventors submitted a reply to the Office Action mailed March 6, 2012 on September 6, 2012. A further communication from the USPTO office, dated November 27, 2012, titled 'Notice of Non-Compliant Amendment' was answered by applicant on December 13, 2012. Applicants/joint inventors believes the latest Office Action from the USPTO, dated April 2, 2013, is the latest action and is in response to the September 6, 2012 reply by Applicants.

paragraph 2, 'Claims 1-4 are ...'

2. Applicants/joint inventors makes note of the claims as they are numbered, claims 1-4.

In regard to the Office Action's section 'Response to Arguments',

paragraph 3, 'Applicant's arguments filed ...'

3. Applicants/joint inventors acknowledges the filing date of the last reply to be September 6, 2012 and further December 13, 2012 for corrections to said filing.

In regard to the Office Action's section 'Claim Objections',

paragraph 4, 'The Applicant does ...'

4. Applicants incorrectly created claims 1-4 with regard to said 'means' and has updated claims 1-4 in this reply. Applicant is not invoking 112 6th paragraph, as Applicants believes, as it does not apply.

paragraph 5, 'Therefore, the...'

5.

In regard to the Office Action's section 'Claim Objections',

paragraph 6, 'Claims 1-4 objected ...'

6. Applicants has revised the claims accordingly.

In regard to the Office Action's section 'Claim Rejection – 35 USC § 112 ', paragraph 7, 'The following ...'

7.

paragraph 8, 'Claims 1-4 ...'

8. Applicants has revised the claims accordingly.

paragraph 9, 'Furthermore, ...'

9. Applicants has revised the claims accordingly.

In regard to the Office Action's section 'Conclusion ', paragraph 10, 'THIS ACTION ...'

paragraph 11, 'A shortened statutory ... '

paragraph 12, 'Any inquiry ...'

Applicants/joint inventors has talked with examiner by phone. Discussion with regard to the actual invention and further to some changes that would bring the claims into compliance. Applicants/joint inventors have had a difficult time in confirming the correct language of the claims and has reached the filing deadline; Applicants submits the changes to the claims that hopefully corrects the language and brings the claims into compliance. (Please see main remarks section above.)

paragraph 13, 'If attempts ...'

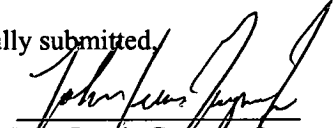

paragraph 14, 'Information regarding ...'

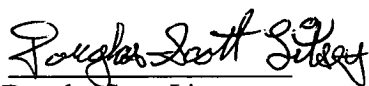

#### CONCLUSION:

For all the above reasons, Applicants/joint inventors submits that the claims are now in proper form as he has been able to understand they should be, and that the claims all define the ability for patent over prior art. Therefore Applicants/joint inventors submit that this application is now in condition for allowance which action they respectfully solicit.

Conditional Request for Constructive Assistance

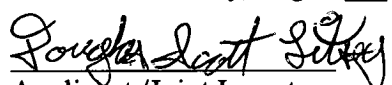

Applicants/joint inventors have amended the claims of this application to the best of their knowledge and ability so that they (hopefully) are proper, definite, and define novel structure which is also unobvious. If for any reason this application is not believed to be in full condition for allowance, Applicants/joint inventors respectfully requests constructive assistance and suggestions of the Examiner pursuant to M.P.E.P. §2173.02 and §707.07(j) in order that the undersigned can place this application in allowable condition as soon as possible and without the need for further proceedings.

Respectfully submitted,  
8/26/17   
Date: John Lewis Guymon Jr  
Applicant/Joint Inventor

Applicants: John Lewis Guymon Jr / Douglas Scott Litsey  
Application Title: Securable Independent Electronic Document  
Examiner/GAU: Kaveh Abrishamkar

**CLAIMS as amended re Request for Continued Examination**

1. An electronic document for secured information exchange supporting independence of specific platform and of nonessential party, tangibly embodied in a computer readable storage medium, the securable independent electronic document comprising:

a normative standard graphical image based container adapted for sectional components, the graphic image sectional component container comprising:

a graphical image sectional component, wherein said image component adapted for storing graphical image data of said graphic image container type,

wherein said component may include encrypted content wherein said encrypted content can be decrypted;

wherein with a set of machine readable instructions in a computer system, said component can be processed in an automated fashion by said computer system, and

wherein if visually perceived by a human user, said component can be interacted upon and processed in a manual fashion by said user; and

a character text sectional component adapted for storing normative standard character text based digital signature formatted data,

wherein with a set of machine readable instructions in a computer system, said component can be processed in an automated fashion by said computer system

wherein if visually perceived by a human user, said component can be interacted upon and processed in a manual fashion by said user;

and, if user specified, additional sectional components wherein said additional components adapted for the storage of any of the following data types:

character text data, said character text comprising scripting text, rich text, markup language text, or other character text, wherein said char text can include one or more of the following:

a character text Uniform Resource Locator (URL),  
encoded data, wherein said encoded data can be of any type or value including encrypted or embedded data of any type including that of the inscribed herein securable independent electronic document type,  
graphic image(s) data,  
raw binary data,  
intrinsic security feature data,  
container based binary encoded digital signature data,  
any other user specified data;

wherein said sectional components include intrinsic security feature data wherein coupling of said sectional component(s) security feature data generates additional intrinsic security feature data

wherein said intrinsic data or said additional intrinsic data can be stored in any one of said sectional component(s),

wherein automated system interfacing as binary file formatted type data in a direct, non-altered, single byte precision original 'incrementally-filed' data handling and storage method, whereby having said char text sectional component encapsulated in said binary document container allows said character text to sustain its original sequential filed data form, and

wherein independent creation and processing of said container from said sectional components' creation and processing, and

wherein integrity enhanced non-associated creation and processing intervention from said sectional components' creation and processing, and

wherein integrity enhanced incorporated security feature information coupling of said sectional components' security check information with other said sectional components' security check information, and

wherein said normative standard graphic image container and said normative standard character text sectional components further allows the electronic document

integrity enhanced intervention and association control of processing and storage from non-desired additional parties,

independent interaction of processing and storage from non-desired additional parties,

independent validation of processing and storage from non-desired additional parties, and

independent processing and storage of said machine readable instruction's computing platform;

2. The electronic document of claim 1, wherein said normative standard character text based digital signature sectional component include signatures of one or more of the following types:

- (i) signature;
- (ii) co-signature;
- (iii) counter-signature.

3. The electronic document of claim 2, wherein said document container further comprises additional user specified binary encoded digital signature sectional components, wherein said binary encoded container based digital signature sectional component(s) include signatures of one or more of the following types:

- (i) signature;
- (ii) co-signature;
- (iii) counter-signature.

4. The electronic document of claim 3, wherein said sectional components include at least one cyclic redundancy check (CRC) value.

www.uspto.gov

In re Application of : DECISION ON PETITIONS  
Guymon et al. : UNDER 37 CFR 1.183 and 1.137(a)  
Application No. 12/316,699 : AND  
Filed: 12/15/2008 : DECISION ON REQUEST  
For: SECURABLE INDEPENDENT : UNDER 37 CFR 1.48(a)  
ELECTRONIC DOCUMENT : AND  
: REQUEST FOR REFUND

This is a decision on the papers filed August 8, 2016, which are treated as a (1) a petition under 37 CFR 1.183 to waive the rules and accept papers which are not signed by all inventors; (2) a renewed petition to revive the above-identified application under 37 CFR 1.137(a); (3) a renewed request to correct the inventorship pursuant to 37 CFR 1.48(a), and (5) a renewed request for refund.

The petitions are **dismissed** for the reasons stated below.

Any request for reconsideration of this decision must be submitted within **TWO (2) MONTHS** from the mail date of this decision. Extensions of time under 37 CFR 1.136(a) are permitted. The reconsideration request should include a cover letter entitled "Renewed Petition." This is not a final agency decision.

**Request to Waive the Rules under 37 CFR 1.183**

Petitioner requests that the requirement of 37 CFR 1.33(b) that papers be signed by all inventors or their representative be waived. Specifically, petitioner asserts that joint inventor Douglas Scott Litsey (hereinafter "Litsey") was improperly added as an inventor, but has refused to sign papers related to the application. Petitioner requests waiver of the rules, and that papers be accepted without Litsey's signature.

37 CFR 1.183 states

In an extraordinary situation, when justice requires, any requirement of the regulations in this part which is not a requirement of the statutes may be suspended or waived by the Director or the Director's designee, *sua sponte*, or on petition of the interested party, subject to such other requirements as may be imposed. Any petition under this section must be accompanied by the petition fee set forth in § 1.17(f) .

Petitioner's argument has been considered, but is not persuasive. 37 CFR 1.183 permits the Director to waive a rule when extraordinary circumstances exist and justice requires waiver of

Art Unit: OPET

the rule. Applicant has not shown the existence of any extraordinary circumstances, however, where justice requires waiver of the rule requiring a statement of lack of deceptive intent. Where, as here, the question of inventorship between the diverse parties is vigorously contested, the USPTO will not relax the requirement of 37 CFR 1.48 by way of 37 CFR 1.183.<sup>1</sup> As petitioners have not adequately shown that either an extraordinary situation is herein present or that “justice requires” waiver, the petition for waiver is dismissed.

It would be contrary to the intent of the regulations to permit, *ex parte*, by waiver of the rules, Petitioner to unilaterally extinguish the property rights that Litsey has in this application. Litsey, as a joint inventor, has a property right in this application that can be canceled, revoked, or annulled *only* by proceedings that afford due process of law.<sup>2</sup> An *ex parte* proceeding in the USPTO is not the appropriate forum for the contested extinction of a property right in an application.<sup>3</sup> That is especially so in, as here, the presence of the express objection of the party whose interest(s) is being extinguished.<sup>4</sup> It is well settled that the Office is not the appropriate forum for resolving a dispute concerning the ownership of an application, and, as such, the USPTO will not permit itself to become embroiled in ownership disputes.<sup>5</sup> Furthermore, in circumstances as herein, the USPTO seeks to preserve the rights of all parties to the extent it is able.

Accordingly, the petition is **dismissed**.

### **Proper Extension of Time and Fee Have Not Been Supplied**

Petitioner states that a two (2)-month extension of time is being requested. The fee for a two month extension of time is \$300 and has been submitted. However, the decision mailed on March 7, 2016 set a two month period for reply, with extensions of time available. A reply would have had to have been filed not later than July 7, 2016, to be considered a timely reply with a two (2)-month extension of time. The reply filed on August 8, 2016 (August 7, 2016 was a Sunday (37 CFR 1.7(a))), was filed three (3) months after the period two months after the mailing of the decision of March 7, 2016. Accordingly, a three (3)-month extension of time was required. The fee for a three (3)-month extension of time (small entity) is \$700. It is also noted, as stated below, that the application is not entitled to micro entity status.

37 CFR 1.136(a)(2) states that the date on which the petition and the fee have been filed is the date for purposes of determining the period of extension and the corresponding amount of the fee. The expiration of the time period is determined by the amount of the fee paid. A reply must

Art Unit: OPET

be filed prior to the expiration of the period of extension to avoid abandonment of the application (§ 1.135), but in no situation may an applicant reply later than the maximum time period set by statute, or be granted an extension of time under paragraph (b) of this section when the provisions of paragraph (a) of this section are available.

**Request to Correct Inventorship Under 37 CFR 1.48(a)**

The request under 37 CFR 1.48(a) cannot be considered on the merits because it is not properly signed.

37 CFR 1.33(b), as it applies to applications filed before September 16, 2012, states

(b) *Amendments and other papers.* Amendments and other papers, except for written assertions pursuant to § 1.27(c)(2)(ii) of this part, filed in the application must be signed by:

- (1) A patent practitioner of record appointed in compliance with § 1.32(b);
- (2) A patent practitioner not of record who acts in a representative capacity under the provisions of § 1.34;
- (3) An assignee as provided for under § 3.71(b) of this chapter; or (4) All of the applicants (§ 1.41(b)) for patent, unless there is an assignee of the entire interest and such assignee has taken action in the application in accordance with § 3.71 of this chapter; or
- (4) All of the applicants (§ 1.41(b) ) for patent, unless there is an assignee of the entire interest and such assignee has taken action in the application in accordance with § 3.71 of this chapter.

The declaration filed on December 15, 2008 listed John Lewis Guymon, Jr., and Douglas Scott Litsey as joint inventors. The petition, however, is signed only by inventor Guymon. Any renewed petition must be signed by both inventors or a registered patent practitioner in accordance with 37 CFR 1.33(b).

The request under 1.48(a) must be signed by both joint inventors.

Moreover, 1.48(a) states:

*Nonprovisional application:* Any request to correct or change the inventorship once the inventorship has been established under § 1.41 must include:

- (1) An application data sheet in accordance with § 1.76 that identifies each inventor by his or her legal name; and
- (2) The processing fee set forth in § 1.17(i)

The request lacks item (1).

Art Unit: OPET

The ADS has not been signed by both inventors in accordance with 37 CFR 1.33(b) See 37 CFR 1.76(e).

In view thereof, the request is **DISMISSED**.

#### **Petition Under 37 CFR 1.137(a)**

At the outset, the petition is untimely. As noted above, a three (3) month extension of time was required to make the reply a timely reply. The two (2) month extension of time submitted with the petition on August 8, 2016 was not a sufficient extension of time. Therefore, the petition is untimely.

The Office will not reach the merits of a request for reconsideration of the merits of a request for reconsideration of a decision dismissing a petition under 37 CFR 1.137(a) filed outside of the two-month period for reply, absent payment of the required extension of time fee.

In view thereof, the request for reconsideration is dismissed as untimely filed.

Petitioner has two (2) months from the date of this decision to submit proof that the required extension of time fee was timely paid if Petitioner feels this dismissal was made in error. This period is not extendable. See 1.181(f).

Petitioner is not precluded from filing a new petition that meets all of the requirements of 1.137(a) including a statement that the "entire delay in filing the required reply from the due date for the reply until the filing of a grantable petition was unintentional". Payment of the petition fee set forth in 1.137(b)(2) is required with the filing of the new petition

Petitioner is advised that effective December 18, 2013, petitions to revive an abandoned application under 37 CFR 1.137(a) are on the basis of *unintentional* delay. See *Changes to Implement the Patent Law Treaty*; Final Rule, 78 Fed. Reg. 62368, 62382 (October 21, 2013). Accordingly, applicant should submit the attached petition form. The petition form must be properly signed.

The application became abandoned on October 3, 2013, for failure to timely and properly respond to the final Office action mailed on April 2, 2013, which set a three (3) month shortened statutory period for reply. On October 2, 2013, an amendment after final rejection and a three (3) month extension of time in accordance with 37 CFR 1.136(a) were obtained. On October 18, 2013, however, an Advisory Action Before the Filing of an Appeal Brief was mailed, stating that the reply filed on October 2, 2013, fails to place the application in condition for allowance. Notice of Abandonment was mailed on February 7, 2014. On April 7, 2014, a paper styled as a petition to revive the application was filed, accompanied by a Request for Continued Examination. On April 30, 2014, the petition was dismissed.

Art Unit: OPET

The petition cannot be considered on the merits because it is not properly signed. 37 CFR 1.33(b), as it applies to applications filed before September 16, 2012, states

(b) *Amendments and other papers.* Amendments and other papers, except for written assertions pursuant to § 1.27(c)(2)(ii) of this part, filed in the application must be signed by:

- (1) A patent practitioner of record appointed in compliance with § 1.32(b);
- (2) A patent practitioner not of record who acts in a representative capacity under the provisions of § 1.34;
- (3) An assignee as provided for under § 3.71(b) of this chapter; or (4) All of the applicants (§ 1.41(b)) for patent, unless there is an assignee of the entire interest and such assignee has taken action in the application in accordance with § 3.71 of this chapter; or
- (4) All of the applicants (§ 1.41(b) ) for patent, unless there is an assignee of the entire interest and such assignee has taken action in the application in accordance with § 3.71 of this chapter.

The declaration filed on December 15, 2008 listed John Lewis Guymon, Jr., and Douglas Scott Litsey as joint inventors. The petition, however, is signed only by inventor Guymon. Any renewed petition must be signed by both inventors or a registered patent practitioner in accordance with 37 CFR 1.33(b). In this regard, it is noted that a request to correct the inventorship was filed on August 24, 2015. As indicated above, however, the request cannot be granted.

It is also noted that a proper reply has not been filed in that the RCE filed on April 7, 2014 and the reply filed on October 2, 2013, which is treated as the submission required by § 1.114, were not signed by all of the inventors as required by § 1.33(b). A grantable petition under 37 CFR 1.137(a) requires a proper reply. Petitioners must submit a properly signed RCE Request and submission under 37 CFR 1.114.

Still further, the RCE fee has not been paid in the proper amount. In this regard, the Certification of Micro Entity Status filed on October 2, 2013 is improper because it has not been signed by both inventors. Accordingly, the application has not been granted micro entity status. A properly signed micro entity status form must be filed before micro entity status can be granted. Alternatively, all fees must be paid in the small entity amount.

Furthermore, the petition is not properly signed in accordance with 37 CFR 1.33(b) in that both inventors or their representatives have not signed the petition.

Lastly, the petition must be accompanied by a statement that the entire delay in filing the required reply from the due date for the required reply until the filing of a grantable petition under 37 CFR 1.137(a) was unintentional. The United States Patent and Trademark Office may require additional information if there is a question as to whether either the abandonment or the delay in filing a petition under 37 CFR 1.137(a) was unintentional.

ABANDONED UNINTENTIONALLY UNDER 37 CFR 1.137(a)**

Page 2 of 2

**3. Terminal disclaimer with disclaimer fee**

- Since this utility/plant application was filed on or after June 8, 1995, no terminal disclaimer is required.
- A terminal disclaimer (and disclaimer fee (37 CFR 1.20(d)) of \$ \_\_\_\_\_) disclaiming the required period of time is enclosed herewith (see PTO/SB/63).

**4. STATEMENT:** The entire delay in filing the required reply from the due date for the required reply until the filing of a grantable petition under 37 CFR 1.137(a) was unintentional. [NOTE: The United States Patent and Trademark Office may require additional information if there is a question as to whether either the abandonment or the delay in filing a petition under 37 CFR 1.137(a) was unintentional. (MPEP 711.03(c), subsections (III)(C) and (D)).]

**WARNING:**

Petitioner/applicant is cautioned to avoid submitting personal information in documents filed in a patent application that may contribute to identity theft. Personal information such as social security numbers, bank account numbers, or credit card numbers (other than a check or credit card authorization form PTO-2038 submitted for payment purposes) is never required by the USPTO to support a petition or an application. If this type of personal information is included in documents submitted to the USPTO, petitioners/applicants should consider redacting such personal information from the documents before submitting them to the USPTO. Petitioner/applicant is advised that the record of a patent application is available to the public after publication of the application (unless a non-publication request in compliance with 37 CFR 1.213(a) is made in the application) or issuance of a patent. Furthermore, the record from an abandoned application may also be available to the public if the application is referenced in a published application or an issued patent (see 37 CFR 1.14). Checks and credit card authorization forms PTO-2038 submitted for payment purposes are not retained in the application file and therefore are not publicly available.

## Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Sir / Madam:

Comes now Applicant, John Lewis Guymon Jr, in accordance to Applicant's 'True And Correct Information Statement' below, HEREBY states and swears:

I have read this form and all relevant instructions, whether on this form, or on another and that I certify that all statements made on this declaration as well as all exhibits and schedules hereto, as an integral part of this declaration deemed incorporated by reference herein, are in support of Applicant's Petition to Revive Unintentional Abandoned Application under 37 C.F.R. §1.137(a); THEREFORE, Applicant further states and swears:

Applicant has stated many times in the past of his diligence in getting this application into proper status. Applicant did not intentionally abandon the above referenced application and, having justice required in this extraordinary situation, presents this declaration with due diligence, once again, in attempts to revive this application.

Respectfully submitted,

**PETITION FOR SUSPENSION OF RULES  
UNDER 37 C.F.R. §1.183**

August 8, 2016

mail stop: **Office of the Director; Petitions**  
 Commissioner for Patents  
 P.O. Box 1450  
 Alexandria, VA 22313-1450

Sir / Madam:

Applicant hereby petitions the Commissioner of Patents and Trademarks for Suspension Of Rules, pursuant to 37 CFR §1.183, in the above identified U.S. Patent Application, for waiver of the requirements 37 CFR §1.33(b) requiring signature of all of the applicants for patent of amendments and other paper correspondence. The required petition fee set forth in 35 USC ??? is enclosed .

The present application is made on behalf of John Guymon ('Applicant') and Douglas Litsey ('Mr. Litsey'), collectively ('inventors').

All inventors were under obligation, as condition of employment or agent representation to assign the patent application to John Guymon, dba iBailBonding.Com, a registered company in the State of Utah. See Exhibit ??

Applicant submits concurrently herewith the following:

1. Applicants Declaration In Support Of Petition For Suspension Of Rules.
2. Affidavit of witness Michael King.
3. Copy of previously submitted exhibit list (Exhibit '1')

The above referenced application currently stands abandoned with an unaccepted Certification Of Micro Entity and three (3) dismissed petitions, to wit: 37 CFR 1.48(a) - Correction Of Inventorship, 37 CFR 1.137(a) - Revival Of Unintentionally Abandoned Application and 37 CFR 1.114 - Request For Continued Examination dismissed by the Patent Office by way of a Decision On Petition's correspondence dated March

7, 2016. Applicant submits this petition in support of Applicant's Request For Reconsideration of said unaccepted certification and dismissed petitions, filed concurrently herewith,

Applicant, without knowledge of the requirement for and need of a Petition For Suspension Of Rules pursuant to 37 C.F.R. 1.183 to waive signature of incorrectly listed inventor, having submitted facts and information thought to be sufficient for supporting such waiver need, submitted said micro entity certification and currently dismissed petitions in belief that such would be accepted and/or granted accordingly.

On August 20, 2015 Applicant submitted a Petition For Correction Of Inventorship that included a Supplemental Declaration Of Inventorship in replacement of this application's originally filed Declaration (37 C.F.R. 1.63) For Utility Application. Attached to said petition and supplemental declaration were exhibits of evidence presenting specific facts and other information showing Applicant as the true first sole and only inventor of the above referenced application as well as facts and other exhibits of evidence showing Mr. Litsey's lack of inventorship as well as his unprofessional conduct and unwillingness to cooperate in this applications prosecution. Applicant attaches to and includes within this petition all exhibits previously submitted. Please see Applicant's copy of submitted exhibit list (Exhibit 'I') attached to and included herein.

On multiple occasions Applicant requested Mr. Litsey, an improperly added joint-inventor, to show evidence proving conception of the invention listed in the above referenced application or to sign a statement in support of being deleted as an joint-inventor and that he was listed as inventor by mistake, one made without malicious intent. On all occasions Mr. Litsey stated he could no longer sign any application documentation and further refused to submit the statement showing he was added in error. On two occasions on or around September 30, 2013 Mr. Litsey asked witnesses M. King and T. Willis to accompany him for visit to Applicant's place of residence where, with all four individuals present, such conversations of inventorship and statement refusal from Mr. Litsey's occurred.

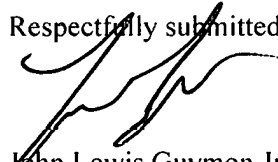

On multiple occasions Applicant presented Mr. Litsey with written letters delivered by way of both first class mail with as well as by hand delivery. Two correspondence sent by first class mail with signature required request attached were returned to Applicant as Mr. Litsey personally refused delivery. Additionally, correspondence was hand delivered by Applicant and personally witnessed by Brittany Ayala.

In view of this applications current state of abandonment and Mr. Litsey's inability to sign application documents as a valid joint inventor along with his unwillingness to sign a statement in support of deleting him as inventor, Applicant has no other recourse but to submit this petition for waiver of signature of all applicants, specifically that of Mr. Litsey. Justice is required as well as fairness is expected in having

the commissioner use his power to issue a suspension of rules in this case so that the declaration of micro entity and currently dismissed petitions be accepted and granted by the patent office accordingly.

Applicant respectfully requests this petition be reviewed in a timely manner. Please contact applicant with any questions or comments regarding this petition .

Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

Sir/ Madam:

This Request for Reconsideration is submitted in response to the various petition and certification decisions, ruled March 7, 2016 in the above-identified patent application.

In support of this Request for Reconsideration Applicant submits the following:

1. Applicant's Declaration In Support - For Suspension Of Rules
2. Applicant's Declaration In Support - Revival of Unintentionally Abandoned Application
3. Affidavit of Michael King

**Petition Under - 1.183 - Suspension of rules**

Filed herewith is Applicant's Petition For Suspension Of Rules, pursuant to 37 C.F.R. §1.183 and required fee Pursuant to 37 C.F.R. §???, requesting waiver of the requirements under 37 C.F.R. §1.33(b) requiring signature of all listed applicants/inventors.

Applicant requests suspension of rules as a result of the patent application being currently in a state of no recourse. Scott cannot sign for revival as he is not an inventor, and will not sign to remove his name as an inventor which would allow Applicant, the sole inventor, to petition to revive his application.

**Petition Under - 1.136 - Extension Of Time**

Filed herewith is a petition for three (3) month extension of time pursuant to 37 C.F.R. §1.136(a) and required fee Pursuant to 37 C.F.R. §1.17(a)(3), thereby extending the deadline for response five months from the mailing date of the Decisions On Petitions to Sunday August 7, 2016 and, therefore pursuant 35 USC 21(b), where (...if day to respond to action falls on sat, sun or holiday then next business day) . to Monday, August 8, 2016. As such this reconsideration request is timely filed.

**Reconsideration Request - 1.27 Request For Refund**

RCE fee changes would present situation where I would want refund if I couldnt pay larger amount to keep Petition under Advisment and would not have submitted the fee if RCE, based on signature needed (now) and larger fee needed (now) - refund of such, as no action on the Petition at the time of refund Petition, Applicant was under the velief that Petition was on hold. Fee accepted as micro and now locked without ability to work with either using funds or requesting a refund, as the fee's are double what Applicant expected, should have and is able to pay. (allow it to be a micro entity, or the fee of RCE should be refunded made in error and therefore applied to account balance for use as a credit toward extension of time fee difference ) to pay for later granting at proper time.

Applicant, filing refund request Aug 2015, within 2 year period pursuant. RCE fee taken at time - no office action done however.

### **Reconsideration Request - 1.29 Micro Entity Certification**

Applicant declares in declaration under penalty 18 USC 1001 that all information supplied on micro entity certifications, previously filed and attached to therefore, is true.

Affidavit of Michael King, attached to and included within, is a statement by Mr. King under oath that he was present and witnesses Mr. Litsey's reluctance to sign as a non inventor and resistance to sign statement releasing said non-inventor added by mistake without malicious intent.

Applicant swears by and currently believes application should be as a certified micro entity. I have made indication on a declaration in 2013, Mike King was there, this was Scott's first predicament where he could not sign morally, Mike was there to watch him demand rights to sign statement to deleted erroneously added inventor. Applicant should qualify as a result of income restrictions and other requirements and waiver of signature as a micro entity and would allow reconsideration and further certification and petition granting.

### **Reconsideration Request - 1.137(a) Revival Of Unintentionally Abandoned Application**

This petition with fee's paid in full for small or micro entity should grant with only Applicant's signature. Justice is due and the director must revive Applicant's application as this is the only course of action Applicant can take to revive the current abandoned application.

The only path Applicant can take, the scenario of being unable to restart up, justice prevails in allowing me to continue and cannot eliminate the innovation of invention.)

### **Reconsideration Request - 1.48(a) Correction Of Inventorship**

In response to this petition's 'DISMISSED' decision, as 1.183 is granted and Micro Entity is Certified, this petition, with only Applicant's signature, becomes properly signed, having fees (37 CFR 1.17(d)) paid \*150 fee (micro) is included in enclosed 600 payment, check #1221.

It should be noted that pursuant to 148(c), the fee should be technically \$0, as

(c) Any request to correct or change the inventorship under paragraph (a) of this section filed after the Office action on the merits has been given or mailed in the application must also be accompanied by the fee set forth in § 1.17(d), unless the request is accompanied by a statement that the request to correct or change the inventorship is due solely to the cancellation of claims in the application.

Additionally, in regard to this petition's Item #1 (ADS) and Item#2 (ADS Processing fee), a copy of the Supplemental Application Data Sheet as presented with Applicant's Exhibit 'SA' is included, having the fee of \$35 (Micro) applied from this application's account balance of \$35 (credit), (indicated correction of inventorship nearly 2 years ago with micro entity certification declaration knowing that SCott needed inventorship change, revealed scott not proper inventor...also Kavaeh final action allowed application went abandoned under micro entity status, the first response allowed, second did not allow with no valld reason and contradicting prior patent office communications)

**Reconsideration Request - Supplemental Application Data Sheet**

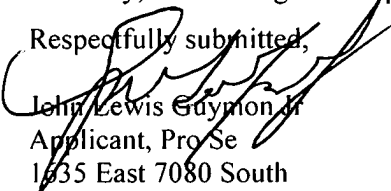

Supplemental application data sheet was included with correction of inventorship and is being included again with this petition. See exhibit #2.

Including correction of inventorship, exhibit B, having processing fee paid with \$35 account balance, on October 2, 2013.

**Reconsideration Request - 1.114 Request For Continued Examination**

The RCE, currently paid for as micro entity, should be granted upon successful application revival.

Respectfully submitted,

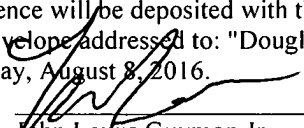

John Lewis Guymon Jr

**Publication Information:**

Request Early Publication (Fee required at time of Request 37 CFR 1.219)

**Request Not to Publish.** I hereby request that the attached application not be published under 35 U.S.C. 122(b) and certify that the invention disclosed in the attached application has not and will not be the subject of an application filed in another country, or under a multilateral international agreement, that requires publication at eighteen months after filing.

**Representative Information:**

Representative information should be provided for all practitioners having a power of attorney in the application. Providing this information in the Application Data Sheet does not constitute a power of attorney in the application (see 37 CFR 1.32). Enter either Customer Number or complete the Representative Name section below. If both sections are completed the Customer Number will be used for the Representative Information during processing.

Please Select One:  Customer Number  US Patent Practitioner  Limited Recognition (37 CFR 11.9)

Customer Number: 63451

**Domestic Benefit/National Stage Information:**

This section allows for the applicant to either claim benefit under 35 U.S.C. 119(e), 120, 121, or 365(c) or indicate National Stage entry from a PCT application. Providing this information in the application data sheet constitutes the specific reference required by 35 U.S.C. 119(e) or 120, and 37 CFR 1.78(a)(2) or CFR 1.78(a)(4), and need not otherwise be made part of the specification.

### APPLICANT'S DECLARATION IN SUPPORT OF PETITION FOR SUSPENSION OF RULES - 37 C.F.R. §1.183

August 8, 2016

Mail Stop Petitions  
Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

Sir / Madam:

Comes now Applicant, John Lewis Guymon Jr, in accordance to Applicant's 'True And Correct Information Statement' below, HEREBY states and swears:

I have read this form and all relevant instructions, whether on this form, or on another and that I certify that all statements made on this declaration as well as all exhibits and schedules hereto, as an integral part of this declaration deemed incorporated by reference herein, are in support of Applicant's Petition For Suspension Of Rules under 37 C.F.R. §1.183;

THEREFORE, Applicant further states and swears:

The current application of patent was initially filed with the incorrect inventorship . The inclusion of Doug Litsey as a joint inventor was done in error by a mistake made without deceptive intent. Consequently Mr. Litsey with his now proper and correct understanding of inventorship will not sign any application documents as it is improper to do so; further, with Mr. Litsey having no written compensation contract or agreement, he refuses to sign a statement in support of him being deleted as an inventor until his inappropriate and unfaithful demands for equal ownership are met. This extraordinary situation of injustice puts the current application in peril and has caused and continues to cause damage to Applicant and requires

**Applicant's True and Correct Information Statement** - Statements made on each and all pages of this 'Declaration in Support of Applicant's Petition For Suspension Of Rules Under 1.183' are true and correct to the best of my knowledge and belief, and I understand that such statements are being relied upon by the United States Patent and Trademark Office, and that they are subject to verification. I have read this entire form before signing it. I am personally responsible for the accuracy of the information provided on this declaration and any attachments. I understand that the making of any willful false statement of material fact with this declaration including the attached sheet(s) will subject me to the provisions of the penal law under 18 U.S.C. §1001 relevant to the making and filing of false statements or the like, punishable by fine or imprisonment, or both.

suspension or waiver of the requirement of signature of all listed Applicants/Inventors as set forth in of 37 CFR 1.33(h) .

**-- APPLICANT AS SOLE FIRST AND ONLY INVENTOR --**

Application is registered in/under iBailBonding.Com. iBailBonding.Com is a registered dba company in the State of Utah, having John Lewis Guymon Jr as the registered owner since April 2001 See EXHIBIT A1,A2,A3 filed in iBailBonding.com. Evidence shows conception only by Applicant and not Mr. Litsey.

**-- ORIGINAL INVENTORSHIP DECLARATOIN INVALID --**

Mr. Litsey was added as an inventor out of a good deed for a friend. Applicant's wife was present at the time when Applicant decided to add Mr. Litsey as an inventor and was also asked if she wanted to be on the patent but she declined. See EXHIBIT

Mr. Litsey shouldn't have filed oath nor should I have included him . Neither of us was not aware of inventorship rules nor the 18 USC 1001 penalty statue that could result from the misfiled application's inventorship information.

Mr. Litsey was incorrectly listed as a joint inventor where inventorship was improperly declared in the application's Original Declaration Of Utility Patent pursuant to 35 USC 115. The declaration of inventorship was executed in error and as soon as error was found Applicant worked diligently to correct the listing of the inventors.

With the filing from the initial application documentation paperwork for inventorship, the list of inventors was incorrect . Pursuant to 35 USC116, inventors must contribute to the conception of the invention and that the person is named in the application as inventor through an error in such arrows without deceptive intention that director may permit the application to we amended accordingly .

**Applicant's True and Correct Information Statement** - Statements made on each and all pages of this 'Declaration in Support of Applicant's Petition For Suspension Of Rules Under 1.183' are true and correct to the best of my knowledge and belief, and I understand that such statements are being relied upon by the United States Patent and Trademark Office, and that they are subject to verification. I have read this entire form before signing it. I am personally responsible for the accuracy of the information provided on this declaration and any attachments. I understand that the making of any willful false statement of material fact with this declaration including the attached sheet(s) will subject me to the provisions of the penal law under 18 U.S.C. §1001 relevant to the making and filing of false statements or the like, punishable by fine or imprisonment, or both.

I am required to file an amendment - one that removes Litsey as inventor as oath is invalid. Applicant believes resulting patent to be invalid or unenforceable due to inequitable conduct or incorrect listing of inventor. Applicant understands and is willing to accept fact that issued patent would be at risk due to inequitable conduct arising from improperly removing Mr. Litsey as an inventor if in fact he was.

**-- COORESPONDENCE WITH MR. LITSEY --**

On or around June 2013 Mr. Litsey, from knowledge Applicant obtained from advice of legal council, was made aware of inventorship requirements and that he was added incorrectly to the application as a joint inventor.

Consequently Mr. Litsey demanded rights and ownership of the invention believing that his contribution in his authorship of the application as well as his ideas for implementation into the industry of the invention.

On or around August 2013 Applicant tried on numerous occasions to get Mr. Litsey to show evidence of inventorship to prove joint inventorship, having him unable to submit evidence of invention conception.

Mr. Litsey, with now known laws of inventorship and oaths and 18 USC 1001 punishment refuses to sign any papers, expecting personal contract between him and I to be in place before he releases inventorship, refusing to sign other documents due to realization of rules of inventorship and penalty of said punishment.

On two occasions on or around September 30, 2013 and October 1, 2013 after Applicant's prior day visit to Mr. Litsey's residence to request that Mr. Litsey assist applicant in document generation for this application's prosecution, Mr. Litsey along with his and Applicant's mutual friends M. King and T. Wills,

**Applicant's True and Correct Information Statement** - Statements made on each and all pages of this '**Declaration in Support of Applicant's Petition For Suspension Of Rules Under 1.183**' are true and correct to the best of my knowledge and belief, and I understand that such statements are being relied upon by the United States Patent and Trademark Office, and that they are subject to verification. I have read this entire form before signing it. I am personally responsible for the accuracy of the information provided on this declaration and any attachments. I understand that the making of any willful false statement of material fact with this declaration including the attached sheet(s) will subject me to the provisions of the penal law under 18 U.S.C. §1001 relevant to the making and filing of false statements or the like, punishable by fine or imprisonment, or both.

asked by Mr. Litsey to accompany him on his multiple visits to Applicant place of residence. During both visits of Mr. Litsey, Mr. King and Mr. Wills to Applicant's place of residence, Applicant requested Mr. Litsey either sign Micro Entity Status Certification, Petition to Revive and RCE documents if he felt he was in fact an inventor or sign a statement stating he was not an inventor and was added in error without deceitful intent. Mr. Litsey refused to sign any additional documents, stating that as a non-inventor it would be improper to do so and additionally refused to sign inventor added in error statement until his demands for written acknowledgement of rights and ownership based on his authoring and ideas for product implementation was met. See EXHIBIT AFFMIKE AFFTIM, Micro

Applicant visited Mr. Litsey on multiple occasions to again explain inventorship situation and the process and commencement of the application's Correction of Inventorship and asked Mr. Litsey to supply his contributions as an inventor, if any or to sign the 'deleting him as incorrectly added inventor occurring without deceptive intent' statement due to his inability to present himself as a true and correct inventor. Applicant recorded one such meeting, attached to and included within as EXHIBIT ???.

Sent Two registered letters September 8, 2014 and November 12th, 2014 to Scott Litsey, asking for his signature on a statement of deletion of him as an incorrectly added inventor occurring without deceptive intent. See EXHIBIT CS1-CS6, CN1-CN6

Applicant hand delivered on November 15, 2014 copies of both registered letters along with statement for Mr. Litsey to sign. See EXHIBIT HS and HN

On August 18, 2015, Applicant again hand delivered to copies of said registered letters and statement of deleted inventor to Mr. Litsey's current residence at that time. B. Ayala personally accompanied me in this delivery. See EXHIBIT WB

#### PENDING PETITIONS AND MICRO ENTITY CERTIFICATION BEFORE THE USPTO

**Applicant's True and Correct Information Statement** - Statements made on each and all pages of this 'Declaration in Support of Applicant's Petition For Suspension Of Rules Under 1.183' are true and correct to the best of my knowledge and belief, and I understand that such statements are being relied upon by the United States Patent and Trademark Office, and that they are subject to verification. I have read this entire form before signing it. I am personally responsible for the accuracy of the information provided on this declaration and any attachments. I understand that the making of any willful false statement of material fact with this declaration including the attached sheet(s) will subject me to the provisions of the penal law under 18 U.S.C. §1001 relevant to the making and filing of false statements or the like, punishable by fine or imprisonment, or both.

Currently the application Of patent Has three (3) petitions as well as a micro entity certification Pending before the U.S. PTO. The petitions have been dismissed and then done and are in need of reconsideration having a petition one got 183 needing to be filed for the suspensions of rules specifically that were the requirement of all applicants/joint inventors are required . further The certification of micro entity is also in need Of the suspension of rules petition filed pursuant to one that won 83 to waive the requirement of the signature of all applicants / inventors .

One of the pending petitions curtly dismissed by the U.S. PTL is a petition for correction of inventorship pursuant to 37 CFR 1.48 . Applicant Presented this petition for correction a ninja ship September 2015 in efforts to correct application inventorship Specifying applicant John Guymon as an original inventor such that if the correction and ownership petition was granted to the other two petitions applicant believes lived and granted has filed March 2016.

Applicant Believed and was under the impression that the Micro Entity Certification filed with Applicant's reply to the USPTO's April 2013 correspondence, was proper filed and processed, with the USPTO acceptance of Applicant's October 2013 reply consisting of a petition for extension of time (37 CFR 1.136), a petition for the revival of an abandoned application and petition (37 CFR 1.37) and petition for Request For continued examination petition (37 CFR 1.14 ).

Applicant submits this declaration in support of Applicant's petition for suspension of rules (37 cfr 1.183) filed concurrently herewith requesting USPTO to wave the requirements of 37 CFR 1.133(a) in order for the Certification of Micro Entity to be accepted as well as the three (3) pending dismissed petitions be granted.

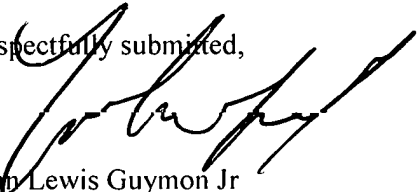

**-- CONCLUSION --**

(35 USC 26 - allows for a properly executed document to be submitted within such time as may be prescribed)

**Applicant's True and Correct Information Statement** - Statements made on each and all pages of this 'Declaration in Support of Applicant's Petition For Suspension Of Rules Under 1.183' are true and correct to the best of my knowledge and belief, and I understand that such statements are being relied upon by the United States Patent and Trademark Office, and that they are subject to verification. I have read this entire form before signing it. I am personally responsible for the accuracy of the information provided on this declaration and any attachments. I understand that the making of any willful false statement of material fact with this declaration including the attached sheet(s) will subject me to the provisions of the penal law under 18 U.S.C. §1001 relevant to the making and filing of false statements or the like, punishable by fine or imprisonment, or both.

Having Mr. Litsey Understand and acknowledge and desiring to not again misstate under oath statements that are untrue Mr. Litsey refuses to sign any documents that present him as an inventor. With this, the United States Patent and Trademark Office should not require his signature further and should require only Applicant John Guymon's signature.

Respectfully submitted,

John Lewis Guymon Jr  
Applicant, Pro Se

**Petition For Refund of Fees Under 37 C.F.R. §1.26**

August 20, 2015

Mail Stop Petitions  
Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

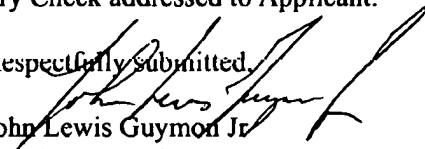

Ref: Intelledoc® Securable Independent Electronic Document, Ser #12/316699, filed December 15, 2008

Sir/ Madam:

Applicant respectfully petitions the Commissioner to refund the fees paid April 2014 (\$335) for Applicant's 'Request for Continue Examination' and 'Petition To Revive' and apply some of the refund to the required fees (\$185) for filing Applicant's 'Correction Of Inventorship' and any late fees, if applicable, therefore leaving the amounts: Total paid \$335 (Chk#1587) – Filing Fee (\$185) – Late Fee (if any) = Refund (\$150). [See Applicant's Exhibit 'VG' – 'Copy of previous fee submitted' and Exhibit 'FE' – 'Fee worksheet, §1.17(i & d)' attached to and included herein.]

Please send refund in the form of a Treasury Check addressed to Applicant.

Respectfully submitted,

The applicant hereby certifies the following— **Electronic Document**

- (1) **SMALL ENTITY REQUIREMENT** - The applicant qualifies as a small entity as defined in 37 CFR 1.27.
- (2) **APPLICATION FILING LIMIT** - Neither the applicant nor the inventor nor a joint inventor has been named as the inventor or a joint inventor on more than four previously filed U.S. patent applications, excluding provisional applications and international applications under the Patent Cooperation Treaty (PCT) for which the basic national fee under 37 CFR 1.492(a) was not paid, and also excluding patent applications for which the applicant has assigned all ownership rights or is obligated to assign all ownership rights as a result of the applicant's previous employment.
- (3) **GROSS INCOME LIMIT ON APPLICANTS AND INVENTORS** - Neither the applicant nor the inventor nor a joint inventor, in the calendar year preceding the calendar year in which the applicable fee is being paid, had a gross income, as defined in section 61(a) of the Internal Revenue Code of 1986 (26 U.S.C. 61(a)), exceeding the "Maximum Qualifying Gross Income" reported on the USPTO website at [http://www.uspto.gov/patents/law/micro\\_entity.jsp](http://www.uspto.gov/patents/law/micro_entity.jsp) which is equal to three times the median household income for that preceding calendar year, as most recently reported by the Bureau of the Census.
- (4) **GROSS INCOME LIMIT ON PARTIES WITH AN "OWNERSHIP INTEREST"** - Neither the applicant nor the inventor nor a joint inventor has assigned, granted, or conveyed, nor is under an obligation by contract or law to assign, grant, or convey, a license or other ownership interest in the application concerned to an entity that, in the calendar year preceding the calendar year in which the applicable fee is being paid, had a gross income, as defined in section 61(a) of the Internal Revenue Code of 1986, exceeding the "Maximum Qualifying Gross Income" reported on the USPTO website at [http://www.uspto.gov/patents/law/micro\\_entity.jsp](http://www.uspto.gov/patents/law/micro_entity.jsp) which is equal to three times the median household income for that preceding calendar year, as most recently reported by the Bureau of the Census.

**Applicant's Oath of Certification of Entity Status and Correction of Inventorship**

October 2<sup>nd</sup>, 2013

Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

Sir/ Madam:

Comes now, Applicant John Lewis Guymon Jr, states and swears:

I have read this form and all relevant instructions, whether on this form, or on another. I certify that all statements made on this oath in support of this Application's:

**Certification of Micro Entity Status  
and  
Correction of Inventorship**

for Application, Serial Number 12/316,699, are true and correct to the best of my knowledge and belief, and I understand that such statements are being relied upon by the USPTO, and that they are subject to verification. I have read this entire form before signing it. I am personally responsible for the accuracy of the information provided on this application, and any attachments. I also understand that the making of any willful false statement of material fact on this application including the attached sheet(s) will subject me to the provisions of the penal law relevant to the making and filing of false statements.

Therefore, Applicant further states and swears by oath that he is unable to obtain a Certification of Micro Entity Status from named inventor Douglas Scott Litsey. Further, Applicant further states and swears by oath that Applicant is in the process of the Correction of Inventorship for the removal of Douglas Scott Litsey as he has incorrectly, as Applicant truly believes, been named as a co-inventor. Further, Applicant is in the process of said Correction of Inventorship and will submit the required materials for such process immediately, without delay, pending the completed gathering of information and supporting evidence. Applicant will have the Correction of Inventorship to the USPTO no later than October 16th, 2013, giving Applicant two (2) weeks to do so if indeed allowed and accepted by the USPTO

Very respectfully,

Signature of Applicant: [Signature] Date 10 21 2013

Sworn to before me: [Signature] Salt Lake County, State of Utah

Signature of Notary Public: [Signature] Date 10 21 2013

[Seal]

**Certificate of Mailing**

I certify that this correspondence will be deposited with the United States Postal Service as Express Mail, Tx# \_\_\_\_\_, with proper postage affixed in an envelope addressed to: "Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450" on the 2<sup>th</sup> day of October 2013.

ET 905638633 US

|----------------------------------------------------------------------------------------------------------|--------------------------|

First Named Inventor: John Lewis Guymon Jr Art Unit: \_\_\_\_\_  
 Application Number: 12/316699 Examiner: Kaveh Abcishamkar  
 Filed: December 15, 2008

Title: Securable Independent Electronic Document

Attention: Office of Petitions  
**Mail Stop Petition**  
 Commissioner for Patents  
 P.O. Box 1450  
 Alexandria, VA 22313-1450

NOTE: If information or assistance is needed in completing this form, please contact  
 Petitions Information at (571) 272-3282.

The above-identified application became abandoned for failure to file a timely and proper reply to a notice or action by the United States Patent and Trademark Office. The date of abandonment is the day after the expiration date of the period set for reply in the Office notice or action plus any extensions of time actually obtained.

**APPLICANT HEREBY PETITIONS FOR REVIVAL OF THIS APPLICATION.**

NOTE: A grantable petition requires the following items:

- (1) Petition fee.
- (2) Reply and/or issue fee.
- (3) Terminal disclaimer with disclaimer fee – required for all utility and plant applications filed before June 8, 1995, and for all design applications; and
- (4) Adequate showing of the cause of unavoidable delay.

**1. Petition fee**

- Small entity – fee \$ \_\_\_\_\_ (37 CFR 1.17(l)). Applicant claims small entity status.  
 See 37 CFR 1.27.
- Other than small entity – fee \$ 35.00 (37 CFR 1.17(l)).

**2. Reply and/or fee**

A The reply and/or fee to the above-noted Office action in the form of \_\_\_\_\_ (identify the type of reply):

- has been filed previously on \_\_\_\_\_
- is enclosed herewith.

B The issue fee of \$ \_\_\_\_\_

- has been filed previously on \_\_\_\_\_
- is enclosed herewith.

This collection of information is required by 37 CFR 1.137(a). The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 8 hours to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Mail Stop Petition, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.  
 If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

PETITION FOR REVIVAL OF AN APPLICATION FOR PATENT ABANDONED UNAVOIDABLY UNDER 37 CFR 1.137(a)

3. Terminal disclaimer with disclaimer fee

- Since this utility/plant application was filed on or after June 8, 1995, no terminal disclaimer is required.
A terminal disclaimer (and disclaimer fee (37 CFR 1.20(d)) of \$ for a small entity or \$ for other than a small entity) disclaiming the required period of time is enclosed herewith (see PTO/SB/63).

4. An adequate showing of the cause of the delay, and that the entire delay in filing the required reply from the due date for the reply until the filing of a grantable petition under 37 CFR 1.137(a) was unavoidable, is enclosed.

WARNING:

Petitioner/applicant is cautioned to avoid submitting personal information in documents filed in a patent application that may contribute to identity theft. Personal information such as social security numbers, bank account numbers, or credit card numbers (other than a check or credit card authorization form PTO-2038 submitted for payment purposes) is never required by the USPTO to support a petition or an application.

**PETITION FOR REVIVAL OF AN APPLICATION FOR PATENT ABANDONED  
UNAVOIDABLY UNDER 37 CFR 1.137(a)**

NOTE: The following showing of the cause of unavoidable delay must be signed by all applicants or by any other party who is presenting statements concerning the cause of delay.

Signature

4/7/2014

Date

John Lewis Guymon Jr

Typed or printed name

Registration Number, if applicable

(In the space provided below, please explain in detail the reasons for the delay in filing a proper reply.)

Both Applicant and Examiner has recently became familiar with the understanding and needs of the application's claims, having continued prosecution of application needed.

Applicant has submitted replies and required fees on time, and after repeated requests for assistance (§707.07(j)) files the enclosed claims.

Applicant, having life's due events, submits this petition within the two month revival time period.

(Please attach additional sheets if additional space is needed.)

**Petition For Revival Of An Application For Patent  
Abandoned Unavoidably Under Under 37 C.F.R. §1.137(a)**

February 6, 2016

Mail Stop Petitions  
Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

Ref: Intelledoc® Securable Independent Electronic Document, Ser #12/316699, filed December 15, 2008

Sir/ Madam:

Applicant respectfully petitions the Commissioner for the revival of this application.

*Revival*

1. Please revive this application from its current unavoidable state of abandonment.

*Remarks*

2. This petition is Applicant's second request for revival with original petition for revival dated April 07, 2014. Applicant's first request was denied for lack of signature and incorrect fee payment.

3. Applicant respectfully ask's that Applicant's previously filed Petition for Correction of Inventorship dated August 20, 2015 be considered at this time to set correct requirement of petition signature to that of Applicant himself, as he is the original first and sole inventor of the inscribed invention. Applicant respectfully requests the Commissioner to grant Applicant's said 'Petition For Correction Of Inventorship'.

In re Application of :  
Guymon et al. : DECISION ON PETITION  
Application No. 12/316,699 : AND  
Filed: 12/15/2008 : DECISION ON  
For: SECURABLE INDEPENDENT : REQUEST FOR REFUND  
ELECTRONIC DOCUMENT : AND DECISION ON REQUEST  
: UNDER 37 CFR 1.48(a)

This is a decision on paper filed on February 6, 2016, styled as a petition to revive the above-identified application. This is also a decision on the request for refund and on the request to correct or change the inventorship pursuant to 37 CFR 1.48(a), both filed August 24, 2015.

The petitions are **dismissed** for the reasons stated below.

Any request for reconsideration of this decision must be submitted within **TWO (2) MONTHS** from the mail date of this decision. Extensions of time under 37 CFR 1.136(a) are permitted. The reconsideration request should include a cover letter entitled "Renewed Petition Under 37 CFR 1.137(a)." This is not a final agency decision.

**Request to Correct Inventorship Under 37 CFR 1.48(a)**

The request under 37 CFR 1.48(a) cannot be considered on the merits because it is not properly signed. 37 CFR 1.33(b), as it applies to applications filed before September 16, 2012, states

- (b) *Amendments and other papers.* Amendments and other papers, except for written assertions pursuant to § 1.27(c)(2)(ii) of this part, filed in the application must be signed by:
- (1) A patent practitioner of record appointed in compliance with § 1.32(b);
  - (2) A patent practitioner not of record who acts in a representative capacity under the provisions of § 1.34;
  - (3) An assignee as provided for under § 3.71(b) of this chapter; or (4) All of the applicants (§ 1.41(b)) for patent, unless there is an assignee of the entire interest and such assignee has taken action in the application in accordance with § 3.71 of this chapter; or
  - (4) All of the applicants (§ 1.41(b) ) for patent, unless there is an assignee of the entire interest and such assignee has taken action in the application in accordance with § 3.71 of this chapter.

The declaration filed on December 15, 2008 listed John Lewis Guymon, Jr., and Douglas Scott Litsey as joint inventors. The petition, however, is signed only by inventor Guymon. Any

Art Unit: OPET

renewed petition must be signed by both inventors or a registered patent practitioner in accordance with 37 CFR 1.33(b).

The request under 1.48(a) must be signed by both joint inventors.

Moreover, 1.48(a) states:

*Nonprovisional application:* Any request to correct or change the inventorship once the inventorship has been established under § 1.41 must include:

(1) An application data sheet in accordance with § 1.76 that identifies each inventor by his or her legal name; and

(2) The processing fee set forth in § 1.17(i)

The request lacks items (1) and (2).

With regard to item (1), an application data sheet (ADS) in compliance with 1.76 must be filed. Petitioner is reminded that 37 CFR 1.76(c) states, with regard to applications filed prior to September 16, 2012:

(c) *Supplemental application data sheets.* Supplemental application data sheets:

(1) May be subsequently supplied prior to payment of the issue fee either to correct or update information in a previously submitted application data sheet, or an oath or declaration under § 1.63 or § 1.67, except that inventorship changes are governed by § 1.48, correspondence changes are governed by § 1.33(a), and citizenship changes are governed by § 1.63 or § 1.67; and

(2) Must be titled "Supplemental Application Data Sheet," include all of the section headings listed in paragraph (b) of this section, include all appropriate data for each section heading, and must identify the information that is being changed, preferably with underlining for insertions, and strike-through or brackets for text removed.

The form for an Application Data Sheet (PTO/SB/14) and the instructions for completing the ADS are available from the USPTO website at [www.uspto.gov](http://www.uspto.gov). A copy is also included with this decision. The ADS must also be signed by both joint inventors.

With regard to item (2), the fee set forth at 1.17(i) (\$70.00 for a small entity) has not been paid. 37 CFR 1.22(a) states, in pertinent part, that patent fees and charges payable to the United States Patent and Trademark Office are required to be paid in advance; that is, at the time of requesting any action by the Office for which a fee or charge is payable. Any renewed request must be accompanied by payment of the petition fee.

Art Unit: OPET

In this regard, the Certification of Micro Entity Status filed on October 2, 2013 is improper because it has not been signed by both inventors. Accordingly, the application has not been granted micro entity status. A properly-signed micro entity status form must be filed before micro entity status can be granted. Alternatively, all fees must be paid in the small entity amount.

In view thereof, the request is **DISMISSED**.

#### **Petition Under 37 CFR 1.137(a)**

Petitioner is advised that effective December 18, 2013, petitions to revive an abandoned application under 37 CFR 1.137(a) are on the basis of *unintentional* delay. *See Changes to Implement the Patent Law Treaty*; Final Rule, 78 Fed. Reg. 62368, 62382 (October 21, 2013). Accordingly, applicant should submit the attached petition form. The petition form must be properly signed.

The application became abandoned on October 3, 2013, for failure to timely and properly respond to the final Office action mailed on April 2, 2013, which set a three (3) month shortened statutory period for reply. On October 2, 2013, an amendment after final rejection and a three (3) month extension of time in accordance with 37 CFR 1.136(a) were obtained. On October 18, 2013, however, an Advisory Action Before the Filing of an Appeal Brief was mailed, stating that the reply filed on October 2, 2013, fails to place the application in condition for allowance. Notice of Abandonment was mailed on February 7, 2014. On April 7, 2014, a paper styled as a petition to revive the application was filed, accompanied by a Request for Continued Examination. On April 30, 2014, the petition was dismissed.

The petition cannot be considered on the merits because it is not properly signed. 37 CFR 1.133(b), as it applies to applications filed before September 16, 2012, states

(b) *Amendments and other papers*. Amendments and other papers, except for written assertions pursuant to § 1.27(c)(2)(ii) of this part, filed in the application must be signed by:

- (1) A patent practitioner of record appointed in compliance with § 1.32(b);
- (2) A patent practitioner not of record who acts in a representative capacity under the provisions of § 1.34;
- (3) An assignee as provided for under § 3.71(b) of this chapter; or (4) All of the applicants (§ 1.41(b)) for patent, unless there is an assignee of the entire interest and such assignee has taken action in the application in accordance with § 3.71 of this chapter; or
- (4) All of the applicants (§ 1.41(b) ) for patent, unless there is an assignee of the entire interest and such assignee has taken action in the application in accordance with § 3.71 of this chapter.

Art Unit: OPET

The declaration filed on December 15, 2008 listed John Lewis Guymon, Jr., and Douglas Scott Litsey as joint inventors. The petition, however, is signed only by inventor Guymon. Any renewed petition must be signed by both inventors or a registered patent practitioner in accordance with 37 CFR 1.33(b). In this regard, it is noted that a request to correct the inventorship was filed on August 24, 2015. As indicated above, however, the request cannot be granted.

It is also noted that a proper reply has not been filed in that the RCE filed on April 7, 2014 and the reply filed on October 2, 2013, which is treated as the submission required by § 1.114, were not signed by all of the inventors as required by § 1.33(b). A grantable petition under 37 CFR 1.137(a) requires a proper reply. Petitioners must submit a properly signed RCE Request and submission under 37 CFR 1.114.

Still further, the RCE fee has not been paid in the proper amount. In this regard, the Certification of Micro Entity Status filed on October 2, 2013 is improper because it has not been signed by both inventors. Accordingly, the application has not been granted micro entity status. A properly signed micro entity status form must be filed before micro entity status can be granted. Alternatively, all fees must be paid in the small entity amount.

Lastly, the petition must be accompanied by a statement that the entire delay in filing the required reply from the due date for the required reply until the filing of a grantable petition under 37 CFR 1.137(a) was unintentional. The United States Patent and Trademark Office may require additional information if there is a question as to whether either the abandonment or the delay in filing a petition under 37 CFR 1.137(a) was unintentional.

A properly signed petition and a proper reply must be filed as a prerequisite to revival of the application.

In view thereof, the petition is **DISMISSED**.

Receipt of the petition fee is acknowledged. No further petition fee is due.

### **Request for Refund**

The request for refund cannot be considered on the merits because it is not properly signed in accordance with 37 CFR 1.33(b) as listed above.

Applicant requests that the fees for the petition to revive and request for continued examination filed on April, 2014 be refunded, and a portion of the refund be applied to the fees for a correction of inventorship, and any late fees, if applicable.

37 CFR 1.26(a) states that the Director may refund any fee paid by mistake or in excess of that required. *A change of purpose after the payment of a fee, such as when a party desires to*

Art Unit: OPET

*withdraw a patent filing for which the fee was paid, including an application, an appeal, or a request for an oral hearing, will not entitle a party to a refund of such fee. (emphasis added)*

It is further noted that the showing of record is that papers requesting a petition to revive the application and a request for continued examination were filed on April 7, 2014. The Office mailed a decision in response to the petition on April 30, 2014. Rather than the fee being paid by mistake or in excess of that required, petitioners now desire a change of purpose.

Accordingly, the request for refund cannot be granted and is **dismissed**.

**Representative Information:**

Representative information should be provided for all practitioners having a power of attorney in the application. Providing this information in the Application Data Sheet does not constitute a power of attorney in the application (see 37 CFR 1.32). Enter either Customer Number or complete the Representative Name section below. If both sections are completed the Customer Number will be used for the Representative information during processing.

| First Name                                                                                                                                                   | Last Name | Registration Number |  |                   |

This collection of information is required by 37 CFR 1.76. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 23 minutes to complete, including gathering, preparing, and submitting the completed application data sheet form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

## Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these records.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

**PETITION FOR REVIVAL OF AN APPLICATION FOR PATENT  
ABANDONED UNINTENTIONALLY UNDER 37 CFR 1.137(a)**

Docket Number (Optional)

[Empty box for Title]

Attention: Office of Petitions

**Mail Stop Petition**

Commissioner for Patents

P.O. Box 1450

Alexandria, VA 22313-1450

FAX (571) 273-8300

NOTE: If information or assistance is needed in completing this form, please contact the Office of Petitions at (571) 272-3282.

The above-identified application became abandoned for failure to file a timely and proper reply to a notice or action by the United States Patent and Trademark Office. The date of abandonment is the day after the expiration date of the period set for reply in the Office notice or action plus any extensions of time actually obtained.

**APPLICANT HEREBY PETITIONS FOR REVIVAL OF THIS APPLICATION.**

NOTE: A grantable petition requires the following items:

- (1) Petition fee;
- (2) Reply and/or issue fee;
- (3) Terminal disclaimer with disclaimer fee – required for all utility and plant applications filed before June 8, 1995, and for all design applications; and
- (4) Statement that the entire delay was unintentional.

**1. Petition fee**

Small entity fee \$ \_\_\_\_\_ (37 CFR 1.17(m)). Applicant asserts small entity status. See 37 CFR 1.27.

Undiscounted fee \$ \_\_\_\_\_ (37.CFR.1.17(m)).

**2. Reply and/or fee**

A The reply and/or fee to the above-noted Office notice or action in the form of

\_\_\_\_\_ (identify the type of reply):

has been filed previously on \_\_\_\_\_.

is enclosed herewith.

B The issue fee and publication fee (if applicable) of \$ \_\_\_\_\_

has been paid previously on \_\_\_\_\_.

is enclosed herewith.

This collection of information is required by 37 CFR 1.137(a). The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11, 1.14 and 41.6. This collection is estimated to take 1 hour to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: **Mail Stop Petition, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

*If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.*

**PETITION FOR REVIVAL OF AN APPLICATION FOR PATENT  
ABANDONED UNINTENTIONALLY UNDER 37 CFR 1.137(a)**

Page 2 of 2

**3. Terminal disclaimer with disclaimer fee**

- Since this utility/plant application was filed on or after June 8, 1995, no terminal disclaimer is required.
- A terminal disclaimer (and disclaimer fee (37 CFR 1.20(d)) of \$ \_\_\_\_\_) disclaiming the required period of time is enclosed herewith (see PTO/SB/63).

**4. STATEMENT:** The entire delay in filing the required reply from the due date for the required reply until the filing of a grantable petition under 37 CFR 1.137(a) was unintentional. [NOTE: The United States Patent and Trademark Office may require additional information if there is a question as to whether either the abandonment or the delay in filing a petition under 37 CFR 1.137(a) was unintentional. (MPEP 711.03(c), subsections (III)(C) and (D)).]

**WARNING:**

Petitioner/applicant is cautioned to avoid submitting personal information in documents filed in a patent application that may contribute to identity theft. Personal information such as social security numbers, bank account numbers, or credit card numbers (other than a check or credit card authorization form PTO-2038 submitted for payment purposes) is never required by the USPTO to support a petition or an application. If this type of personal information is included in documents submitted to the USPTO, petitioners/applicants should consider redacting such personal information from the documents before submitting them to the USPTO. Petitioner/applicant is advised that the record of a patent application is available to the public after publication of the application (unless a non-publication request in compliance with 37 CFR 1.213(a) is made in the application) or issuance of a patent. Furthermore, the record from an abandoned application may also be available to the public if the application is referenced in a published application or an issued patent (see 37 CFR 1.14). Checks and credit card authorization forms PTO-2038 submitted for payment purposes are not retained in the application file and therefore are not publicly available.

## Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

# Instructions for Application Data Sheet 37 CFR 1.76

Updated May 12, 2008

## Contents

1. PDF Fillable form Instructions
2. Detailed Instructions for Fields
  - a. Applicant Information
  - b. Correspondance Information
  - c. Application Information
  - d. Representative Information
  - e. Domestic Benefit/National Stage Information
  - f. Foreign Priority Information
  - g. Assignee Information
  - h. Signature
3. Country Code Table
4. WIPO ST.3 Table
5. State/Province List
6. Active Military Descriptions List

## 1. Fillable form Instructions

### Overview

USPTO fillable PDF forms use the features provided with Adobe Acrobat products. There is some validation of the information you enter but you are still responsible for entering all required information (instructions may require some information to be handwritten on the form).

### Software Requirements

To view, complete and print USPTO fillable PDF forms you will need the free Adobe Acrobat Reader software installed on your computer. Version 7.0.8, 7.0.9, 8.1.1, or 8.1.2 of Adobe Reader is recommended.

### Opening the Form

Your web browser may be configured with an Adobe Reader plug-in to automatically open the file within your browser's window upon download. To download the file directly to disk, right click the form title link then select "Save Target/Link As..." from the menu. Use Adobe Reader to open the file.

## Completing the Form

When positioning the cursor on a fillable area or element, the cursor will change appearance. The I-beam pointer allows you to type text. The hand pointer allows you to select a check box or radio button.

Enter the appropriate data in each box or field. To move from one field to the next, press the Tab key. You can also use your cursor to move from field to field. Place your cursor in the field you want to fill in, then left-click.

Some fields limit the maximum number of characters you can enter and may automatically advance to the next field.

For additional help with fillable forms, see the Adobe Reader's online help information.

### Tips:

- Use the latest version of Adobe Reader in order to ensure the form's full functionality
- This fillable form permits the entered data to be automatically loaded into the Office's electronic systems, such as PALM when electronically submitted. Printing the form, scanning it to create a PDF and submitting the scan of the printed form will require Office Personnel to key in the information by hand.
- **Do not use this ADS form as a Supplemental ADS.** This form does not comply with the requirements for a Supplemental Application Data Sheet (ADS). See 37 CFR 1.76(c). Supplemental ADS papers must be labeled Supplemental ADS or Supplemental Application Data Sheet and identify the information that is being changed.

## 1. Detailed Form Instructions by Field

### Applicant Information:

|                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Secrecy Order<br>Checkbox                   | Rule 37 C.F.R. 5.2, states that if an invention has been determined to be a matter of national security, the Director of Patents & Trademarks has the right to keep the invention secret. Under the same rule, applicants are obligated to notify the Office of any related cases that the Commissioner has kept secret. Note that documents associated with applications under Secrecy Order may not be filed electronically.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Applicant Authority                         | Select the radio button associated with the type of authority one has to file this patent application from Inventor, Legal Representative under 35 U.S.C 117, and Party of Interest under 35 U.S.C. 118.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Inventor                                    | One who contributes to the conception of an invention. The patent law of the United States of America requires that the applicant in a patent application must be the inventor.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Legal Representative<br>under 35 U.S.C. 117 | 35 U.S.C. 117 Legal representatives of deceased inventors and of those under legal incapacity may make application for patent upon compliance with the requirements and on the same terms and conditions applicable to the inventor.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Party of Interest<br>under 35 U.S.C. 118    | 35 U.S.C. 118 Whenever an inventor refuses to execute an application for patent, or cannot be found or reached after diligent effort, a person to whom the inventor has assigned or agreed in writing to assign the invention or who otherwise shows sufficient proprietary interest in the matter justifying such action, may make application for patent on behalf of and as agent for the inventor on proof of the pertinent facts and a showing that such action is necessary to preserve the rights of the parties or to prevent irreparable damage; and the Director may grant a patent to such inventor upon such notice to him as the Director deems sufficient, and on compliance with such regulations as he prescribes.                                                                                                                                                                                                                                                                                                    |
| Inventor Status Drop<br>Down                | In case of the death of the inventor, the legal representative (executor, administrator, etc.) of the deceased inventor may make the necessary oath or declaration, and apply for and obtain the patent. Where the inventor dies during the time intervening between the filing of the application and the granting of a patent thereon, the letters patent may be issued to the legal representative upon proper intervention.<br><br>When the inventor is insane or legally incapacitated. In case an inventor is insane or otherwise legally incapacitated, the legal representative (guardian, conservator, etc.) of such inventor may make the necessary oath or declaration, and apply for and obtain the patent.<br><br>Filing when an inventor refuses to sign or cannot be reached: (a) If a joint inventor refuses to join in an application for patent or cannot be found or reached after diligent effort, the application may be made by the other inventor on behalf of himself or herself and the nonsigning inventor. |
| Prefix                                      | Enter any name prefix of the inventor. (Optional)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Given Name                                  | Enter the first or given name of the inventor. If the inventor has only one name, enter a period in this field.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Middle name                                 | Enter any middle name of the inventor. | An Address is being provided for the correspondence Information of this application. | <p>Select this checkbox to have correspondence in this application sent to an address that is not associated with a specific customer number.</p> <p>When filing an application, a correspondence address must be set forth in either an application data sheet (§ 1.76), or elsewhere, in a clearly identifiable manner, in any paper submitted with an application filing. If no correspondence address is specified, the Office may treat the mailing address of the first named inventor (if provided, see §§ 1.76(b)(1) and 1.63(c)(2)) as the correspondence address. The Office will direct all notices, official letters, and other communications relating to the application to the correspondence address. The Office will not engage in double correspondence with an applicant and a registered attorney or agent, or with more than one registered attorney or agent except as deemed necessary by the Director. If more than one correspondence address is specified, the Office will establish one as the correspondence address. For the party to whom correspondence is to be addressed, a daytime telephone number should be supplied in a clearly identifiable manner and may be changed by any party who may change the correspondence address.</p> |
| Customer Number                                                                      | <p>Enter the customer number associated with the address where correspondence in this application should be sent.</p> <p>A number assigned by the Office that is used to simplify the submission of an address change, to appoint a practitioner, or to designate the fee address for a patent. <i>Customer numbers</i> are primarily used by attorneys and law firms, and must be requested using the "Request for Customer Number" form (PTO/SB/125). (Previously referred to as "payor number") -</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Provide a customer address                                                           | If a customer number is not entered, the customer correspondence address must be provided.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Title of the Invention           | The title of the invention may have up to 500 characters and it must be as short and specific as possible. The approved characters include: A-Z,0-9,standard keyboard characters plus <i>f</i> ,..., <i>CE</i> ,™,œ,ÿ,ı,ç,£,¤,¥,§,©, <sup>®</sup> ,«,-,®,°,±, <sup>²</sup> , <sup>³</sup> ,μ, <sup>¹</sup> , <sup>º</sup> ,»,¼,½,¾,¿,À,Á,Â,Ã,Ä,Å,Æ,Ç,È,É,Ê,Ë,Ì,Í,Î,Ï,Ñ,Ó,Ô,Õ,Ö,Ø,Ù,Ú,Û,Ü,Ý,ß,à,á,â,ã,ä,å,æ,ç,è,é,ê,ë,ì,í,î,ï,ð,ó,ô,õ,ö,÷,ø,ù,ú,û,ü,ý,ÿ,<br>NOTE: Please see the EFS-Web FAQ's regarding using special characters in Title of Invention and in all the Named fields for Inventors I |
| Attorney Docket Number           | This field is optional. It may be used to enter an internal reference number associated with this submission. This field is limited to 25 characters.                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Entity Status Small              | For purposes of small entity determination per <i>MPEP 509.02</i> – small entity means an independent inventor, a small business concern, or a nonprofit organization eligible for reduced patent fees.                                                                                                                                                                                                                                                                                                                                                                                            |
| Application Type                 | An application may be either provisional, non-provisional, or a reissue. At this time EFS-Web does not accept reissue applications. Select the application type from the drop-down list.                                                                                                                                                                                                                                                                                                                                                                                                           |
| Subject Matter                   | An application may be either a utility application, a design application, or a plant application. At this time EFS-Web does not accept plant applications. Select the subject matter of the application from the drop-down list.                                                                                                                                                                                                                                                                                                                                                                   |
| Suggested Classification         | Enter a suggested classification for the application. Optional.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Sub Class                        | Enter a suggested subclass for the application. Optional.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Suggested Technology Center      | Enter a suggested technology center for the application. Optional.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Total Number of Drawing Sheets   | Enter the total number of drawing sheets in the application. Optional.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Suggested Figure for Publication | Enter a suggested figure for publication. Optional.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Latin Name                       | Enter the Latin Name of the plant described in the submission as required by UPOV.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Variety Denomination Name        | Enter the Variety denomination of the plant described in the submission as required by UPOV.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Request Early Publication        | Request for early publication – Select if this application should be published as soon as possible.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Request Not to Publish           | Check this box if a request for non-publication under 35 U.S.C. 122(b) and 37 CFR 1.213 is being made.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

### Representative Information:

|                           |                                                                                                                                |

| Customer Number Selection | Check this box if you want to assign a Customer Number for patent practitioners associated with this application.              |
| Customer Number Entry     | If Customer number is selected enter the customer number associated with patent practitioner information for this application. |
| Patent Practitioner       | Check this box if you want to input a US Patent Practitioner name.                                                             |
| Prefix                    | Enter any name prefix of the patent practitioner. Choose the desired prefix from the drop-down menu.                           |

|                                |                                                                                                                                                                                                                                                                  |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Given Name                     | Enter the first or given name of the patent practitioner.                                                                                                                                                                                                        |
| Middle Name                    | Enter any middle name of the patent practitioner.                                                                                                                                                                                                                |
| Family Name                    | Enter the last or family name of the patent practitioner. REQUIRED.                                                                                                                                                                                              |
| Suffix                         | Enter any name suffix of the patent practitioner.                                                                                                                                                                                                                |
| Registration number            | Enter the USPTO registration number of the patent practitioner.                                                                                                                                                                                                  |
| Add Additional Representatives | If patent practitioner is selected, enter the name and registration information for each patent practitioner and select the Add button when the information is complete. Repeat for each patent practitioner. A maximum of 10 patent practitioners can be added. |
| Remove                         | If you want to delete a patent practitioner select the Remove button next to the patent practitioner you wish to remove.                                                                                                                                         |
| Limited Recognition            | Check this box if you want to input a name under Limited Recognition (37 CFR 11.9).                                                                                                                                                                              |
| Prefix                         | Enter any name prefix of the patent practitioner. Choose the desired prefix from the drop-down menu.                                                                                                                                                             |
| Given Name                     | Enter the first or given name of the patent practitioner.                                                                                                                                                                                                        |
| Middle Name                    | Enter any middle name of the patent practitioner.                                                                                                                                                                                                                |
| Family Name                    | Enter the last or family name of the patent practitioner. REQUIRED.                                                                                                                                                                                              |
| Suffix                         | Enter any name suffix of the patent practitioner.                                                                                                                                                                                                                |
| Registration number            | Enter the USPTO registration number of the patent practitioner.                                                                                                                                                                                                  |
| Add Additional Representatives | If patent practitioner is selected, enter the name and registration information for each patent practitioner and select the Add button when the information is complete. Repeat for each patent practitioner. A maximum of 10 patent practitioners can be added. |
| Remove                         | If you want to delete a patent practitioner select the Remove button next to the patent practitioner you wish to remove.                                                                                                                                         |
|                                |                                                                                                                                                                                                                                                                  |

### Domestic Benefit/National Stage Information:

|                               |                                                                                                                                                                                                                                                     |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Application Number            | If this field is left blank, it will signify "This Application is a" to refer to the application being submitted. You may also enter any application number that is already referred to in the Prior Application Number fields on the current form. |
| Continuity Type               | Select the relationship between patent applications by selecting one of seven available relationship buttons. The relationships are continuation, division, continuation-in-part, 371 of international, substitution, reissue and non-provisional.  |
| Prior Application Number      | Provide the application serial number for the related application.                                                                                                                                                                                  |
| Filing Date                   | Select the filing date of the prior related application from the drop-down menu, which converts into a calendar. The date should be in the format YYYY-MM-DD.                                                                                       |
| Application Status            | Select the status of the related application from Issued, Pending, Abandoned, or Expired.                                                                                                                                                           |
| Add Domestic Priority Data    | Add the information to the continuity information list by selecting the Add button.                                                                                                                                                                 |
| Remove Domestic Priority Data | Delete the information to the continuity information list by selecting the Remove button.                                                                                                                                                           |

### Foreign Priority Information:

|                    |                                                                                                                                                                                                                                                                                    |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Application Number | Enter the Foreign Document Number of an associated foreign-filed application in the Application Number field. PCT number format: PCT/aaYY/xxxxx or PCT/aaYYYY/xxxxx where aa is valid foreign receiving office/country code YY or YYYY is year and xxxxx is the five-digit number. |
| Country            | Enter the country where the application was filed. See WIPO ST. 3 Table for                                                                                                                                                                                                        |

|                         |                                                                                                  |
|-------------------------|--------------------------------------------------------------------------------------------------|
|                         | complete listing, along with abbreviation.                                                       |
| Parent Filing Date      | Enter the foreign filing date in the Date field. The date should be in the format YYYY-MM-DD     |
| Priority Claimed Yes/No | Indicate whether or not foreign priority is claimed by selecting the appropriate radio button.   |
| Add                     | Add additional information to the Foreign Priority Information list by selecting the Add button. |
| Remove                  | Delete information to the Foreign Priority Information list by selecting the Remove button.      |

### Publication Assignee Information:

|                                                |                                                                                                                                                                                                        |
|------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| If the Assignee is an Organization check here. | Check this box if the assignee is an organization.                                                                                                                                                     |
| Organization Name                              | If the application is assigned to an organization, enter the name of the organization.                                                                                                                 |
| Prefix                                         | Enter any name prefix of the assignee. Choose the desired prefix from the drop-down menu.                                                                                                              |
| Given Name                                     | If the application is assigned to an individual or group of individuals, enter the first or given name of the assignee. If the assignee has only one name, enter a period into one of the name fields. |
| Middle Name                                    | Enter any middle name of the assignee.                                                                                                                                                                 |
| Family Name                                    | Enter the name of the assignee that USPTO is to publish on the front page of the patent application publication.                                                                                       |
| Suffix                                         | Enter any name suffix of the assignee                                                                                                                                                                  |
| Address 1                                      | Enter the first line of the address of the assignee that USPTO is to publish on the front page of the patent application publication.                                                                  |
| Address 2                                      | Enter the second line of the assignee's address.                                                                                                                                                       |
| City                                           | Enter the city of the assignee's address                                                                                                                                                               |
| Postal Code                                    | Enter the 5 - 9 digit postal code of the assignee. Entry of a postal code for foreign countries is optional                                                                                            |
| State / Province                               | Enter the state of the assignee's address. See State/Province List for choices.                                                                                                                        |
| Country                                        | Enter the country of the assignee's address. See Country Code Table for complete listing, along with abbreviation.                                                                                     |
| Phone Number                                   | Enter the telephone number of the assignee.                                                                                                                                                            |
| Fax Number                                     | Enter the fax number of the assignee.                                                                                                                                                                  |
| Email Address                                  | Enter the e-mail address of the assignee.                                                                                                                                                              |
| Add Button                                     | Additional Assignee information Blocks may be generated.                                                                                                                                               |
| Remove Button                                  | Assignee information Blocks may be removed.                                                                                                                                                            |

### Signature:

|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Signature           | This signature is an electronic legal signature. The individual named MUST add a signature. Electronic signature should be in the format /###/ where # is alpha-numeric, space or punctuation (but not / or ?), it cannot just have space or punctuations. Example: "/John Doe/". For more information see 37 CFR 1.4(d)(3). |
| Date                | Enter the date that the submission is being signed. Or, select the date from the drop-down menu, which converts into a calendar. The date format should be in the form YYYY-MM-DD.                                                                                                                                           |
| Name / Print        | Type or write the name of the filer.                                                                                                                                                                                                                                                                                         |
| Registration Number | Please enter a Registration Number if you are a patent practitioner.                                                                                                                                                                                                                                                         |

- <sup>(1)</sup> Intergovernmental organizations (regional patent offices) acting for certain Contracting States under the PCT (Patent Cooperation Treaty). In case of the European Patent Office, it also acts as International Searching Authority and International Preliminary Examining Authority under the PCT.
- <sup>(2)</sup> The Benelux Office for Intellectual Property (BOIP) (former Benelux Trademark and Designs Offices) have replaced the national Offices of Belgium, Luxembourg and the Netherlands with regard to actions relating to marks and industrial designs.
- <sup>(3)</sup> In the electronic database of the International Register of Marks, the International Bureau of WIPO uses the following additional codes, not part of the active codes of Standard ST.3: "DD" to designate Germany without the territory that, prior to October 3, 1990, constituted the Federal Republic of Germany; "DT" to designate Germany without the territory that, prior to October 3, 1990, constituted the German Democratic Republic.
- <sup>(4)</sup> The code "WO" is used in relation to the international publication under the Patent Cooperation Treaty (PCT) of international applications filed with any PCT receiving Office, as well as in the publication of international deposits of industrial designs under the Hague Agreement Concerning the International Deposit of Industrial Designs. In this regard, reference is made to INID code (33) given in WIPO Standards [SI.9](#) and [SI.60](#). The code "WO" is also the appropriate code to be used with respect to international registrations of marks under the Madrid Agreement and the Madrid Protocol Concerning the International Registration of Marks. The code "IB" is used in relation to the receipt of international applications under the PCT filed with the International Bureau of WIPO in its capacity as a PCT receiving Office.
- <sup>(5)</sup> Provisional name.
- <sup>(6)</sup> Code BF adopted in 1994.
- <sup>(7)</sup> Code CD adopted in 1997.
- <sup>(8)</sup> Code MM adopted in 1999.
- <sup>(9)</sup> Code TL adopted on May 26, 2002.
- <sup>(10)</sup> Code SY used before 1.1.1978.
- <sup>(11)</sup> Code DL used before 1.1.1978.
- <sup>(12)</sup> Subsequent to the country name change of "Yugoslavia" to "Serbia and Montenegro", that took effect on February 4, 2003, and to the decision by the ISO 3166/MA to use the new country name and new two-letter code "CS" (to replace "YU"), which was announced on July 23, 2003, the SCIT Standards and Documentation Working Group agreed, at its fifth session, in November 11, 2004, to recommend that the two-letter code "YU" continue to be used for "Serbia and Montenegro" in the industrial property field because code "CS" raised certain problems due to its former use to represent "Czechoslovakia" until 1993.

**Petition For Revival Of An Application For Patent  
Abandoned Unavoidably Under Under 37 C.F.R. §1.137(a)**

February 6, 2016

Mail Stop Petitions  
Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

Ref: Intelledoc® Securable Independent Electronic Document, Ser #12/316699, filed December 15, 2008

Sir/ Madam:

Applicant respectfully petitions the Commissioner for the revival of this application.

*Revival*

1. Please revive this application from its current unavoidable state of abandonment.

*Remarks*

2. This petition is Applicant's second request for revival with original petition for revival dated April 07, 2014. Applicant's first request was denied for lack of signature and incorrect fee payment.

3. Applicant respectfully ask's that Applicant's previously filed Petition for Correction of Inventorship dated August 20, 2015 be considered at this time to set correct requirement of petition signature to that of Applicant himself, as he is the original first and sole inventor of the inscribed invention. Applicant respectfully requests the Commissioner to grant Applicant's said 'Petition For Correction Of Inventorship'.

4. Applicant, having due diligence in prosecution of this application of patent, believes delay's in Applicant's prosecution have been unavoidable by Applicant. Further, Applicant allowed extra delay time for any involved party's relative correspondence.

5. Applicant has paid the necessary micro entity fee of eight hundred fifty dollars (\$850).

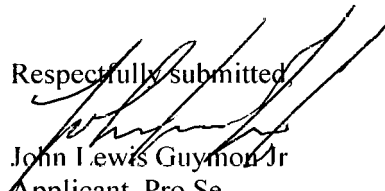

## *Conclusion*

6. It is respectfully submitted that all requirements under 37 C.F.R §1.137(a) have been met through this petition and accompanying documentation. With this, and applicant's thorough and detailed presentation of evidence of Applicant's in-depth work history and contribution, Applicant respectfully requests the Commissioner to grant this 'Petition for Revival Of An Application For Patent'.

7. This request for amendment is accompanied by the fees required by 37 C.F.R. §1.137(a)

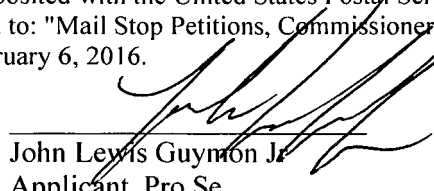

8. An early consideration and grant of the Applicant's 'Petition For Correction Of Inventorship' dated August 20, 2015 and consequent grant of this 'Petition For Revival Of An Application For Patent' as well as Applicant's 'Petition of Request For Continued Examination' dated April 7, 2014, is earnestly solicited.

Respectfully submitted,

Ref: Intelledoc® Securable Independent Electronic Document, Ser #12/316699, filed December 15, 2008

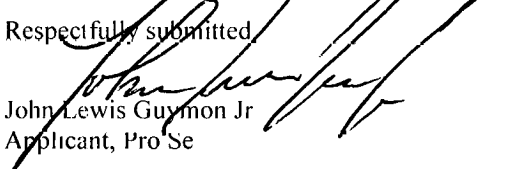

Sir/ Madam:

Applicant presents this letter of cover and explanation for the enclosed contents comprising Applicant’s ‘Petition To Revive’ and Check # 1752 for payment of fees totaling nine hundred sixty five dollars (\$965) .

This coorespondence relates to and completes previously submitted 'Petition for Correction of Inventorship' dated August 20, 2014, and 'Petition of Request for Continued Examination', dated April 07, 2014, and is Applicant's second 'Petition To Revive'. 'Applicants first Petition to Revive', dated April 07, 2014, was denied for missing signature and improper fee. Applicant's Correction of Inventorship corrects this Application's required signature set to that of Applicant himself and therefore allows the included 'Petition To Revive' proper pass as submitted and signed by Applicant himself with payment of proper fee amount paid.

Applicant previously entered a Petition for Request of Refund that was based on Applicant's misunderstanding of petition procedure and submits the inclosed check as payment for the resultant fee amount of \$965, the total of all petition's required micro entity fees due (\$1300) (850=Revive,150=CorrInv,300=RCE) less previous payments of \$335 (Chk#1587- April 7, 2014).

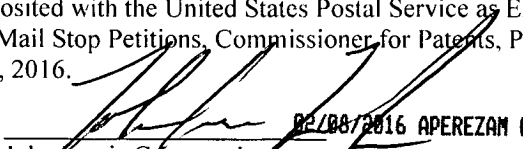

Thank you for your consideration and time with this correspondence.

Respectfully submitted  
  
 John Lewis Guymon Jr  
 Applicant, Pro Se

**Petition For Refund of Fees Under 37 C.F.R. §1.26**

August 20, 2015

Mail Stop Petitions  
Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

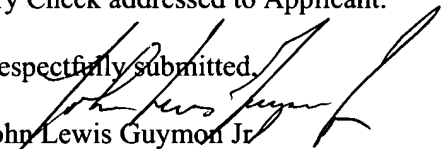

Ref: Intelledoc® Securable Independent Electronic Document, Ser #12/316699, filed December 15, 2008

Sir/ Madam:

Applicant respectfully petitions the Commissioner to refund the fees paid April 2014 (\$335) for Applicant's 'Request for Continue Examination' and 'Petition To Revive' and apply some of the refund to the required fees (\$185) for filing Applicant's 'Correction Of Inventorship' and any late fees, if applicable, therefore leaving the amounts: Total paid \$335 (Chk#1587) – Filing Fee (\$185) – Late Fee (if any) = Refund (\$150). [See Applicant's Exhibit 'VG' – 'Copy of previous fee submitted' and Exhibit 'FE' – 'Fee worksheet, §1.17(i & d)' attached to and included herein.]

Please send refund in the form of a Treasury Check addressed to Applicant.

Respectfully submitted,

Ref: Intelledoc® Securable Independent Electronic Document, Ser #12/316699, filed December 15, 2008

Sir/ Madam:

Applicant respectfully petitions the Commissioner to correct the inventorship of the above-identified patent application in all appropriate records of the U.S. Patent and Trademark Office.

**Amendment**

1. Please amend the records for the above-identified application for the correction of inventorship leaving only the primary first listed inventor through process misjoinder remove. This amendment will result in the listing of:

**John Lewis Guymon, Jr., Salt Lake City, UT (US)**

as the exclusive original and sole inventor of the Intelledoc® serviced Securable Independent Electronic Document invention described within the initially and amended claimed application of patent for which a patent is sought, referenced within, Serial number: 12/316,699, Publication number: US 2010/0153739.

## Remarks

2. This application was originally filed in the names of John Lewis Guymon, Jr. [hereafter "Applicant"] and Douglas Scott Litsey [hereafter "misjoinder"]. Upon Applicant's proper knowledge and understanding of 35 U.S.C §115 (pre-AIA), where 'Inventorship', defined as:

**'...the original and first inventor(s) of the conceived invention for which he solicits a patent'**

Applicant, having listed misjoinder as a joint inventor as a result of a mistake made without deceptive intent based on a kind gesture of friendship and other reasons personal, kindly requests the Commissioner to remove misjoinder from the position of a joint inventor leaving only Applicant listed as the exclusively original, first and sole inventor who, in the entirety, conceived, realized and reduced to practice the inscribed and referenced within Intelledoc<sup>®</sup> Securable Independent Electronic Document invention.

3. Applicant, having improper knowledge of the requirements of inventorship asked misjoinder if he wanted to be put on the application just before mailing the application to the USPTO. Having agreed, misjoinder, also without proper knowledge of the rules of inventorship, was happy to have his name added at the time the application was submitted. Both parties were not properly aware of the circumstances governing inventorship and the requirements for entering into declaration as an original inventor. Consequently the original declaration/oath submitted with the application filing is invalid, null and void and requires the filing of Applicant's 'Supplemental Declaration of Inventorship', included with this petition. [See Applicant's 'Supplemental Declaration of Inventorship'.]

4. Further, with the now proper knowledge and understanding of 35 U.S.C §116(pre-AIA), both currently listed inventors realize the joint inventorship listing of misjoinder as improper and not in accordance of 35 U.S.C. §115(pre-AIA), therefore permitting amendment under 35 U.S.C §116(pre-AIA).

5. Currently no assignment of the application has been made. It was common knowledge and agreed to that iBailBonding.Com would be the 'assignee' and owner of all rights and control of the Intelledoc<sup>®</sup> product. Misjoinder was an agent of iBailBonding.Com and entered into a 'Confidentiality And Non-Disclosure Agreement' with iBailBonding.Com.

6. Applicant has supplied a “Supplemental Declaration of Inventorship”, attached to and included herein, specifying detailed descriptions and supporting evidence material of his conception, realization and creation of the Intelledoc<sup>®</sup> invention described in the application. [See Applicant’s ‘Supplemental Declaration of Inventorship’ and Exhibits 'A' through 'Z' attached to and included herein.]

7. As required under 37 C.F.R. §1.48(a) effective March 19, 2013, this request is accompanied by a ‘Supplemental Application Data Sheet’ in accordance with 37 C.F.R. §1.76. This supplemental application data sheet is a copy of the original one sent in at the time of filing application that was filled out by witness C. Guymon. The copied sheets have misjoinder’s information crossed out as only the Applicant should be listed as an inventor. [See Applicant’s Exhibit ‘SA’ – ‘Supplemental Application Data Sheet’ attached to and included herein.]

8. This request is accompanied by a copy of the ‘Declaration 37 C.F.R. §1.76 for Utility Application’ that was included with the originally filed application. [See Applicant’s Exhibit ‘OD’ – ‘Declaration for Utility Application’ attached to and included herein.]

## Misjoinder

9. Misjoinder was named as a joint inventor incorrectly based on a kind gesture of friendship and respect due to his assistance of that of the future implementation and use of the Intelledoc<sup>®</sup> serviced Securable Independent Electronic Document invention and not of said invention’s conception, realization, research, experimentation or reduction.

10. Misjoinder was added as a result Applicant’s feelings that misjoinder shouldn’t be left out if he was to become part of the team. Misjoinder conceded and agreed Applicant was the owner of all rights to the product and invention and verbally stated Applicants ownership and his position of assistant to applicant. Applicant believed and felt assured that, at the time misjoinder became aware of the project, Applicant himself realized, conceived and created in its entirety the Intelledoc<sup>®</sup> serviced electronic document invention. When Applicant suggested that misjoinder and additionally Applicant’s wife could be added to the application misjoinder was happy that he’d be considered and expressed his gratification of the initiative

while Applicant's wife was reluctant to take part due to legal and technological reasons and refused accordingly. Included within is an affidavit of Applicant's wife C. Guymon of her knowledge and witness of this discussion. [See Applicant's Exhibit 'WC' – 'Affidavit of C. Guymon' attached to and included herein.]

11. Both misjoinder and Applicant were unaware of the proper Inventorship guidelines and criteria when the original oath/declaration of inventorship was submitted. After the improper inventorship listing was made aware of through consultation, confirmed criteria knowledge of inventorship and its effect became known and confirmed with furthered discussion. After misjoinder realized his rights and ownership of the patent, outlined and governed by 35 C.F.R. §262, changes with the removal of his name as an inventor he has attempted to secure rights and compensation by forced demand of written agreement, refusing to participate in or allowing prosecution of the application until his demands were met.

12. Misjoinder had no need or reason for a secured electronic document nor was he working in an industry that was in need such and only became aware of the electronic document product when Applicant presented him the concept and details of Applicant's project. Further, upon his initial discovery and realization of the document invention as presented by Applicant, misjoinder claimed that it was impossible for Applicant to have engineered such a product and argued profusely with Applicant for hours in and near the streets outside residence of misjoinder. As time has continued, misjoinder has only started to wonder of the possibilities the document invention may present.

13. B. Ayala personally knows misjoinder and has witnessed his involvement as well as has assisted in the hand delivery of copies of previous letters and their contents. [See Applicant's Exhibit 'WB' – 'Affidavit of B. Ayala ' attached to and included herein.]

**(Involvement)**

14. Misjoinder began working with Applicant after returning from Colorado in July 2008. Applicant had been working intensely on drafting the applicant of patent document since February of 2008 with devotion and dedication and continued in the writing of the application document to December 15, 2008 when it was filed. Misjoinder assisted in some authoring and final editing of parts of the specification and of finalizing drawings used in the application. All reference material for misjoinder was already generated by Applicant and was giving to misjoinder in order to be finalized for the application. [See Applicant's Exhibit

'DR' – 'Drawings - Preliminary', Exhibit 'DI' – 'Drawings - Information' and Exhibit 'EI' – 'Embodiment Information' attached to and included herein.]

15. Misjoinder took instruction from and followed direction of Applicant, and, due to his lack of product knowledge, did not supply or suggest design or conceptual advice and only listened to and made acknowledgement of the information Applicant supplied to him.

16. Misjoinder assisted Applicant in confirming the Intelledoc<sup>®</sup> invention's applicability within different industries or market areas. In all circumstances, the invention succeeded in conforming, addressing and satisfying the requirements of each scenario presented, having original conception requiring no changes, modifications, alterations or improvements from the original conception of the invention necessary.

17. Misjoinder did not perform any work or other services outside the presence or guidance of Applicant and acted only as an agent of iBailBonding.Com, following directions, suggestions or other instruction presented by Applicant.

18. Misjoinder made no contact with others in the industry. Misjoinder did not meet, corespond, or discuss with any other person any design or conception of the invention with any individual other than with Applicant who was responsible for presenting him with all invention aspects and details.

19. Misjoinder, responsible for product marketing and implementation, never secured any contracts, vendors, recipients, or other individuals, contracts, business propositions or other possible ventures, investors or contributing entities.

20. Misjoinder has no ownership or affiliation to business entities, web site domains, trademarks and other Intellectual Property of Applicant.

**(Knowledge)**

21. Misjoinder had no real knowledge before late 2008 of the technology used in the invention during the time Applicant was writing the application. It was at this time that Applicant tried to help him become knowledgeable and have a basis of the technology enough so that he could help with authoring and

the final editing of notes and instructions and have understanding what he was writing. With his presented work he introduced a multitude of errors in his authored material, as he was not familiar with of the various technologies included.

22. Misjoinder was not familiar abilities, features or technical materials relating to the conception and production of the Intelledoc<sup>®</sup> electronic document invention and only became aware of such technical materials when presented to him from Applicant during the later days of the drafting of the application and during discussion times after the filing of applications.

23. Misjoinder was unfamiliar with the technologies used in the invention, had no hands on experience, or other development involvement of the technologies used in the invention. Programming experience of misjoinder is limited to statistical data analysis and reporting, having his experience solely from his use of and involvement with the Statistical Analysis System 'SAS' product developed by SAS Institute Inc. Consequently, his knowledge and expertise in various industries where the Intelledoc<sup>®</sup> electronic document product could be used allowed him the ability to confirm the invention's use and implementation.

24. Misjoinder was not familiar with the technology, completed no research nor competitor analysis nor information search nor application development nor generated any other product component or resolution.

#### **(Contributions)**

25. Misjoinder did not contribute anything, specifically any documentation either in paper or electronic form, to the project other than the assistance mentioned above,. Further, Misjoinder has perhaps only two emails in regard to correspondence exchange between the two of us and these emails may be only of his geological hobby activities. Applicant is unable to recollect any email correspondence at this time and only believes that misjoinder drafted two pages of notes from interpretation of presented discussion of Applicant. Misjoinder made contribution only to that of authorship and editor of a few minor items of the application content, having been given instruction and information sources from Applicant for him to help in an insignificant amount of final authorship and editing review. Misjoinder has not participated in any other reporting, documentation process, reply correspondence or patent prosecution except to assist Applicant

during the final days of various reply generations to USPTO office action communications. Further, misjoinder did not participate in any research or other hands on research or rebuttal development, as Applicant solely completed this during all stages of application prosecution.

26. Misjoinder did not contribute to nor supply of any unique, different or original feature or material for the conception, design or drafting of neither the application's original, amended or added independent nor dependent claims. All claim features, matter or materials were realized, conceived, derived and deduced prior to the involvement of misjoinder.

27. Misjoinder has not presented any prior art or patent search references or related materials and has not contributed any of the referenced materials presented in the application's information disclosures currently on file.

28. Misjoinder, having no understanding of the invention before nor during the time of the drafting of the application of patent, had no desire to study patent law or otherwise write a patent and only offered editing contributions of the embodiments and drawings sections of materials originally realized, conceptualized and documented by Applicant. These two sections, having substantial technical information errors due to the lack of technological knowledge of misjoinder or his desire to research said section materials. Applicant believes that the mere assistance in drafting the application does not establish inventorship rights and therefore believes original material supplied by Applicant was that of an originally conceived idea of Applicant.

29. Misjoinder has no research materials, bound notebooks, journals, email correspondence or other documentation in support of the Intelledoc<sup>®</sup> invention's realization, conception, design, testing, or other aspect and has not presented to Applicant any reference or proof of such materials with the exception of two (2) pages of notes drafted from his perceived understanding and acknowledgement of the invention as presented to him by Applicant.

30. Misjoinder completed no field study.

31. Misjoinder has no source code developed, owned, used, tested, researched or otherwise designed. Misjoinder has not contributed any material hardware or resources.

32. Misjoinder was unaware of the multiple digital signature layers available until shown Applicant's completed prototypes.

33. Misjoinder completed no patent law study. Applicant was solely responsible for the generation of the application of patent and subsequent prosecution.

34. Misjoinder supplied no resources for the drafting of the application.

**(Perspective)**

35. Misjoinder continuously presented his own document invention that was out of the scope of need and contribution. He insisted he knew better ways and presented desired to file his own application of patent for a invention he referred to as the "GLE" - Guymon Litsey Envelope", suggesting a far superior product in a proprietarily digital form having a file extension that of '.GLE'. Applicant suggested he file of application, having him listed as first and original inventor, and with our proper knowledge and understanding of 'Inventorship' we both realized we could each obtain granted patents of our products.

36. Misjoinder had no need, didn't believe and distorted the original concept with his assurance of a more advanced convoluted GLE document container, the least of which having an extension '.gle', and thus removing it from any chance of contendership as a well known already accepted readily used and completely welcomed file type, let alone so many other things that he didn't share with me and further believed and made known that would included in his application for patent as he has suggested with determination to file an application listing him as the first inventor. This has been his intended path and was accepted by myself back when discussions of the Intelledoc's<sup>®</sup> marketing and use were prevalent. He insisted that the GLE container was better and the real way it should be done and preceded along that path without noting or sharing notes or other idealization he may have had. The GLE stands for 'Guymon Litsey Envelope', his 'advanced electronic document' that he intended on filing application of patent for. He did not focus his efforts on the original Intelledoc<sup>®</sup> invention, which Applicant believes is the true and proper Securable

Independent Electronic Document concept, having such behavior further illustrate his obstinacy and non-desire to work together on an already proven concept developed solely by Applicant.

37. Misjoinder stated on numerous occasions during post-filing discussion that his notes were in his head and he did not need to write things down – he, consequently never acquired nor presented any documentation as such. Applicant believes misjoinder intentionally kept information to himself as he did not ever write down or share his thoughts with Applicant. Furthermore, with this becoming the standard norm, Applicant documented all discussions between misjoinder and himself and, of fairness for contributor recognition, indicated who it was that contributed said discussion material or contribution accordingly, having any record at all at leasted documented in Applicant’s project notes. Applicant believes that during discussion times where misjoinder would be listed at the top of Applicant’s notes misjoinder was formulating his referenced ‘GLE Envelope’ and for some reason choose not to share nor record, having Applicant’s documentation available for future interpretation answering questions of, perhaps, ‘Why? Intelledoc® already does.’.

#### **(Post Application)**

38. Misjoinder became somewhat familiar with the ISO specs used after the patent application filing and had no knowledge of such before 2008.

39. Contributions made by misjoinder consisted only of choosing which security measure process he wanted to use when it came time to develop an application that would service the document for the public. He was allowed to choose so as to create a generic non-bias use of the Intelledoc® security feature capability. During the days talking with him trying to get his take on his contribution he mentioned the ‘silly cat’ function - the use of a picture to encode data and a ‘cross hash’ function, both of which falls under the VendorVerify™ capability of the document that Applicant had built in during conception. When he was told that these were trade-secret items and not unique patentable items, he realized that his assistance in the use of the product did not make him an inventor of the product.

40. Misjoinder assisted in ‘Office Action’ reply correspondence briefly on two occasions, generally within the last 1 to 2 days before submission was required and did so when desperately asked by Applicant out of need for another individual’s review, suppling Applicant reassurance guidance. Misjoinder did not do

any work research or tech review for said replies and offered only confirmation of applicant's previously prepared reply's material content, suggesting possible edition as necessary.

**(Actions)**

41. With no contractual agreement between and misjoinder and iBailBonding.Com, Applicant's registered business where misjoinder serves as an agent, misjoinder demanded and continues to demand equal compensation to that of Applicant after being instructed that if an original and first/joint inventor he would have had automatically inherited rights and ownership.

42. Further, as time continued, misjoinder become extremely contumacious, unprofessional and unwilling to cooperate, demanding ownership of rights of intellectual property and other product related items that he has no claim to, insisting on compensation of services not yet performed. Misjoinder currently demands signed documents granting him ownership and rights of 50% of the project, having such demands completely out of line and without merit. Upon several occasions, Applicant has tried to explain the requirements for correct inventorship listing and has further offered compensation to misjoinder through written contract for the work or services completed while marketing the Intelledoc<sup>®</sup> electronic document product. The marketing and use of the product has always been the area at which misjoinder could offer assistance as the product was already reduced to practice, tested and ready for use in the industry by then.

43. Misjoinder demands and intentional stall are due to his realization that only properly listed inventors who contributed to the conception of the invention idea are allowed ownership rights and with the removal of his name he does not have rights to exercise his ownership of the product, which is something that he never possessed and was never promised nor did he enter into any contractual agreements due to his limited involvement in regard to future marketing and use of the product, something that he failed to complete or instantiate procurement as well.

44. The actions and demands on the part of misjoinder are unreasonable and improper; notwithstanding, he has tried in any way possible to force Applicant into written agreement in support of his outrageous and incredibly unfair demands. His actions have presented Applicant undue stress and harm.

45. Witness account statements of Michael King and Tim Wills to the actions of misjoinder and his persistent and unprofessional attitude are documented. Mr. King and Mr. Wills witnessed the persistent demands of misjoinder, unprofessional attitude and his blinent refusal to assitst applicant with coorespondence in preparation for submission to the USPTO.

46. Requests for further assistance of misjoinder have only been returned with reluctance to communicate, failure to respond to information requests and further unwillingness and unprofessional actions in regard to delivery of correspondence or open communications for resolve. Attached to and included within are copies of letters sent by Applicant to misjoinder, their course of delivery and misjoinder purposeful rejection of said communicate. [See Applicant's Exhibit 'CS' – 'Coorespondence 09/08' and Exhibit 'CN' – 'Coorespondence 11/12' attached to and included herein.]

47. Conversations between Applicant and misjoinder took place before the first letter dated September 9, 2014 was written in which I mentioned that I was please to have finally talked with him and understood what he felt his contribution was. Consequently I wrote of this in the September 9th dated letter.

48. Misjoinder was hand delivered copies of letters sent via US Mail by Applicant and was witnessed by B. Ayala who knows of Misjoinder personnally. [See Applicant's Exhibit 'HS' – 'Copy of hand delivery notice 09', Exhibit 'HN' – 'Copy of hand delivery notice 11' and Exhibit 'WB' – 'Affidavit of B. Ayala ' attached to and included herein.]

49. If misjoinder was to have worked from the beginning his desire to continue would be obvious. Further, misjoinder demands half of the rights and ownership to something that he hasn't made contribution to, specifically with regard to product conception and development. His assistance to Applicant has been with the final authoring and editing of parts of the specification and drawings of the application of patent and with product use discussions, having the product conceived, designed, built and tested before his involvement. Discussions between Applicant and misjoinder have only been toward the future marketing and sales of the product and according compensation for misjoinder.

## Support

50. The Intelledoc<sup>®</sup> electronic document allows the custom unique platform independent user-specified security features for intrinsically securing the document product the user desires. This open independent security implementation capability, VendorVerify<sup>™</sup>, was solely and completely realized, conceived, deduced and implemented by Applicant and allows flexible security feature implementation and usage as desired by the electronic document creator, user, involved third party or other involved party. The VendorVerify<sup>™</sup> security feature was realized and conceived on or about September 2002 as part of the initial Electronic Surety Bail Bond product and seamlessly propagated to the Intelledoc<sup>®</sup> electronic document invention.

51. Applicant began field of study on or about July 1999, conceived invention on or about September 2002 and achieved actual reduction to practice of the electronic document on or about February 2003. Applicant's family, whom Misjoinder is personally known, is familiar with Applicant's work from the beginning. [See Applicant's Exhibit 'WV' – 'Affidavit of V. Guymon' attached to and included herein.]

52. Conception of the Intelledoc<sup>®</sup> serviced Securable Independent Electronic Document invention was complete, proven and supported by Intelledoc<sup>®</sup> serviced electronic document prototypes, having invention's conception and presented claims and specified features completely proven by said prototype documents.

53. Applicant has created seven (7) different documents for Bail Bonding software application under development. These documents include the surety bond as well as various other documents and support the idea/claim that the documents have an underlying document template. These seven documents are proven and printed from bonding application used to input data. These different documents were under development as separate unique documents since 2001 which was the same time of the eSuretyBailBond conception, and is the actual date at which a generic template document could be used for an array of different documents. The actual idea to patent this container was the later date of Feb 2006 along with securing the idea's name, logo and other supporting product identification art.

54. All United States Patent and Trademark Office correspondence replies, amendments, patent searches, information disclosure development, document disclosure submission, company formation and trademark work has been completed and is owned by Applicant.

55. All prior art research and Information Disclosure submissions have all been completed in their entirety by Applicant and shows search dates for prior art starting many years before misjoinder's initial involvement, having conception of the invention at this time and searches done to determine confirmation of the existence of 'prior art' if available. Further, Applicant realized, conceived of, produced and confirmed the Intelledoc<sup>®</sup> servicing before legal statue was derived, and tested multiple prototypes of the invention during the time the laws and statues were originally first written in Applicant's native state of Utah!

## — Due Diligence —

56. Applicant has worked every day since first starting the project July 1999 and has done so diligently without purposeful haste or unintentional delay. Applicant believes the current application, Serial# 12/316699 is valid and presents the invention correctly as it has been realized by applicant; further Applicant desires to continue with the application by reviving and requesting a continued examination of the application, working with attentive keenness toward it's subsequent granting.

57. Applicant, in addition to monitoring correspondence deadlines, has been responsible for all fees and payments for both patent and trademark intellectual property, having all costs supplied by Applicant or Applicant's family. Misjoinder was not responsible for watching critical dates for reply correspondence or other time duration limited events and showed no concern to be involved of prosecution guidelines or time periods, leaving the responsibility for proper prosecution of events solely up to Applicant.

58. Applicant did all the work of research, statue law study and conformation, industry analysis and other R & D activities such as competition review, field research, prototype test, field personnel discussion and other similar activities necessary for product development and proof.

59. The Correction of Inventorship process started as soon as Applicant and misjoinder became aware of its need. Applicant has worked on drafting the petition and it's supporting contents for two years.

During this time the laws have changed regulating this process and thus made the process more difficult for Applicant.

60. Applicant, for purpose of patent protection, was required to file petition for Correction of Inventorship. Due to misjoinder response and subsequent demands, Applicant has suffered undue delays in the process of prosecution as a result of said petition filing requirement.

61. Applicant mentioned that a filing for petition of Correction of Inventorship was to be done soon. Applicant hereby requests attention be made to applicants statement under oath of the intent to file said correction of inventorship petition as stated under oath in Applicant's 'Oath of Micro Entity Status', dated Oct, having given mention of Applicant's intention of filing this Correction of Inventorship petition. [See Applicant's Exhibit 'ME' – 'Copy of Oath - Micro Entity' attached to and included herein.]

62. Additional time has been taken by Applicant because of the thoroughly fair encompassing process. Evidence collection, rule and law study, misjoinder correspondence, and other document filings has further extended the time.

63. Many changes in patent laws during Applicant's prosecution of said laws directly influenced and burdened Applicant excessively, specifically the AIA changed rules/laws as well as changes specifically to the correction of inventorship (37 C.F.R. §1.48).

64. Applicant has visited misjoinder on numerous occasions to discuss the issues at hand and to help misjoinder with contract negotiations or other needs he might have. Several times Applicant has had discussion with misjoinder; however, over time misjoinder has desired to and been able to avoided Applicant completely, therefore requiring Applicant to communicate and present information in written form.

65. Applicant has sent letters, notification of filing letter, personally visited and talked with misjoinder and has done everything in his power, with respect, extra concern and above and beyond assistance to misjoinder to come to resolution only to have misjoinder push further to the improper demands of his request for equal ownership and rights to the Intelledoc<sup>®</sup> Electronic Document which originated, proceeded and remains sole ownership of Applicant.

66. While revisions to 37 C.F.R 1.48 effective Mar. 19, 2013 now apply, Applicant, in process of drafting this petition and related documents since said effective date has submitted this petition in support of the previous revision, effective Sept. 13, 2004, and has attempted to obtain a statement from misjoinder, the inventor to be removed, stating ' ... that the error in inventorship occurred without deceptive intention ... '. Applicant believes that this process was the most fair for misjoinder and included a statement with each of the two letters sent to misjoinder but has been unable to get misjoinder to sign and return the statement due to his improper, unfair and unprofessional behavior. [See Applicant's Exhibit 'CS03' – 'Copy of Statement of Mr. Litsey' and Exhibit 'CN03' – 'Copy of Statement of Mr. Litsey' attached to and included herein.]

67. Applicant presents Misjoinder's last known (current) address as : Douglas Scott Litsey , 3061 West 3500 South #A2 , West Valley City, Utah 84119.

68. Misjoinder, realizing that he has no options, rights or other permissions or author in the Intelledoc<sup>®</sup> product, has resorted to stalling, withholding, not cooperating and other unprofessional unfair and improper actions. As a result, Applicant has been forced to go to extremes to properly present case for inventorship with fairness and over abundant respect and proper notification to misjoinder, giving him ample and all ways to respond and present his position accordingly, if applicable, to report his involvement to further determine, if any, his inventorship ownership rights. Misjoinder has no rights or ownership and has not contributed in any form or fashion to the invention conception, research and development, proof of concept or other involved development process.

## — Conclusion —

69. Applicant presents, with regard to fair and proper action, having due diligence and fair and correct procedure and due course of action.

70. Applicant realized conceived and derived all original and amended claims describes the invention from the conceptual beginning, having all claims and all portions and elements of claims

functionality realized, conceived and derived by Applicant. Further additions and amendments to claims have been solely realized, conceived and derived by Applicant.

71. Details of Applicant's work activities are documented in addition to said activities work related items.

72. Applicant has had to represent himself as he has no resources to hire an attorney. Further, with amendments to relevant Rules and Laws and other statues changing while Applicant has had to procescute this application, Applicant has had to endure additional work and hardship.

73. Applicant has sustained damages and continues to be damaged by the unbelievable actions of misjoinder. The need to be fair and thorough throughout this correction process has additionally increased Applicant's workload. With the timing of a variety of circumstances including stress, physical problems, homelessness and family problems, Applicant has endured significant pressures and endurances while having limited resources for application prosecution.

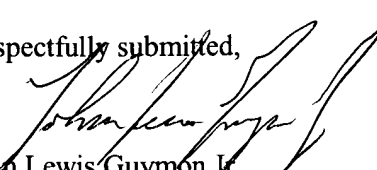

74. The nature of the Intelledoc<sup>®</sup> electronic document invention has required a substantially deeper conceptual and operation feature consideration, prior art review, intricate process assurances, industry practice confirmation, idea communication, idea model stability and model sustainability during all stages of this application's generation, filing and procescution.

75. It is respectfully submitted that all requirements under 37 C.F.R §1.48(a) have been meet through this petition and accompanying documentation. With this, and applicants thorough and detailed presentation of evidence of Applicant's in-depth work history and contribution, Applicant respectfully requests the Commissioner to grant this Petition for Correction Of Inventorship,

76. This request for amendment is accompanied by the fees required by 37 C.F.R. §1.48. Please see Applicant's 'Petition For Refund of Fees', a copy of a check of fees previously paid. Additional fees might be required and Applicant requests such fees be taken as necessary from any refund due. [See Applicant's Exhibit 'VG' – 'Copy of previous fee submitted' and Exhibit 'FE' – 'Fee worksheet, §1.17(i & d)' attached to and included herein.]

77. An early consideration and grant of this petition, as well as a prompt entry of the amendment of inventorship on the application, are earnestly solicited. Please forward any updated Official Filing Receipt.

Respectfully submitted,

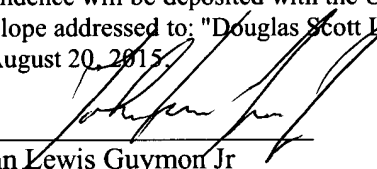

John Lewis Guymon Jr

Applicant, Pro Se

# USPTO Fee Schedule

(Miscellaneous Patent Fees section)

Effective January 1, 2014 (Last Revised on July 1, 2015)

The USPTO fee schedule provides information and fee rates for products and services provided by the USPTO. Payments from foreign countries must be payable and immediately negotiable in the United States for the full amount of the fee required. For additional information, please call the USPTO Contact Center at (571) 272-1000 or (800) 786-9199.

### PATENTS ONLY:

*The fees subject to reduction upon establishment of small entity status (37 CFR 1.27) or micro entity status (37 CFR 1.29) are shown in separate columns. The \$400/\$200 non-electronic filing fee (fee codes 1090/2090 or 1690/2690) must be paid in addition to the filing, search and examination fees, in each original nonprovisional utility application filed in paper with the USPTO. The only way to avoid payment of the non-electronic filing fee is by filing your nonprovisional utility application via EFS-Web. The non-electronic filing fee does not apply to reissue, design, plant, or provisional applications.*

| Miscellaneous Patent Fees |            |                                                         |        |                  |                  |

| Additional Domestic Benefit/National Stage Data may be generated within this form by selecting the Add button.                                                                                                                                                                                                                                                                                         |                 |                          |                          |

**Foreign Priority Information:**

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it contains a valid OMB control number.

|                                           |                                           |  |
|-------------------------------------------|-------------------------------------------|--|
| <b>Application Data Sheet 37 CFR 1.76</b> | Attorney Docket Number                    |  |
|                                           | Application Number                        |  |
| <b>SA 3</b>                               |                                           |  |
| Title of Invention                        | Securable Independent Electronic Document |  |

This section allows for the applicant to claim benefit of foreign priority and to identify any prior foreign application for which priority is not claimed. Providing this information in the application data sheet constitutes the claim for priority as required by 35 U.S.C. 119(b) and 37 CFR 1.55(a).

|                                                                                                        |         |                                 |                                                               |

This collection of information is required by 37 CFR 1.76. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 23 minutes to complete, including gathering, preparing, and submitting the completed application data sheet form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. **DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

7 0D

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

**DECLARATION (37 CFR 1.63) FOR UTILITY OR DESIGN APPLICATION USING AN APPLICATION DATA SHEET (37 CFR 1.76)**

0D

Title of Invention: Securable Independent Electronic Document

As the below named inventor(s), I/we declare that:

This declaration is directed to:

- The attached application, or
- Application No. \_\_\_\_\_ filed on \_\_\_\_\_
- As amended on \_\_\_\_\_ (if applicable);

I/we believe that I/we am/are the original and first inventor(s) of the subject matter which is claimed and for which a patent is sought;

I/we have reviewed and understand the contents of the above-identified application, including the claims, as amended by any amendment specifically referred to above;

I/we acknowledge the duty to disclose to the United States Patent and Trademark Office all information known to me/us to be material to patentability as defined in 37 CFR 1.56, including for continuation-in-part applications, material information which became available between the filing date of the prior application and the national or PCT International filing date of the continuation-in-part application.

**WARNING:**

Petitioner/applicant is cautioned to avoid submitting personal information in documents filed in a patent application that may contribute to identity theft. Personal information such as social security numbers, bank account numbers, or credit card numbers (other than a check or credit card authorization form PTO-2038 submitted for payment purposes) is never required by the USPTO to support a petition or an application. If this type of personal information is included in documents submitted to the USPTO, petitioners/applicants should consider redacting such personal information from the documents before submitting them to the USPTO. Petitioner/applicant is advised that the record of a patent application is available to the public after publication of the application (unless a non-publication request in compliance with 37 CFR 1.213(a) is made in the application) or issuance of a patent. Furthermore, the record from an abandoned application may also be available to the public if the application is referenced in a published application or an issued patent (see 37 CFR 1.14). Checks and credit card authorization forms PTO-2038 submitted for payment purposes are not retained in the application file and therefore are not publicly available.

All statements made herein of my/our own knowledge are true, all statements made herein on information and belief are believed to be true, and further that these statements were made with the knowledge that willful false statements and the like are punishable by fine or imprisonment, or both, under 18 U.S.C. 1001, and may jeopardize the validity of the application or any patent issuing thereon.

**FULL NAME OF INVENTOR(S)**

Inventor one: John L. Gaymon Jr Date: Dec 15, 2008

Signature: [Signature] Citizen of: USA

Inventor two: DOUGLAS SCOTT LITSEY Date: Dec 15, 2008

Signature: [Signature] Citizen of: USA

Additional inventors or a legal representative are being named on \_\_\_\_\_ additional form(s) attached hereto.

This collection of information is required by 35 U.S.C. 115 and 37 CFR 1.63. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 1 minute to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.  
If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

Ref: Intelledoc® Securable Independent Electronic Document, Ser #12/316699, filed December 15, 2008

Sir / Madam:

Comes now, Carrie Guymon, HEREBY states and swears: I have read this form and all relevant instructions, whether on this form, or on another. I certify that all statements made on this Affidavit are in support of the above referenced Application's

**Petition for Correction of Inventorship**

Therefore, I, Carrie Guymon further state and swear:

I have know John Guymon since 1997, during the complete time he has worked on the Intelledoc product and have witnessed no involvement or participation from Mr. Litsey prior to 2008 and know that he is not the original creator of the invention, having the product conceived and in operation prior to Mr. Litsey involvement. Further, at the time of the filing of the application Mr. Guymon added Mr. Litsey to the patent out of a kind gesture of friendship and acknowledgement of Mr. Litsey joining Mr. Guymon to work with him for the product's future marketing and use. Additionally, at the time when Mr. Guymon asked if Scott wanted to be put on the patent, I was also asked if I wanted to be included. I declined mainly because the venture was over my head, both technologically and legally.

Alexandria, VA 22313-1450

Ref: Intelledoc® Securable Independent Electronic Document, Ser #12/316699, filed December 15, 2008

Sir / Madam:

Comes now, Brittany Marie Ayala, HEREBY states and swears: I have read this form and all relevant instructions, whether on this form, or on another. I certify that all statements made on this Affidavit are in support of the above referenced Application's

Petition for Correction of Inventorship

Therefore, I, Brittany Marie Ayala further state and swear: I, Brittany Ayala, assisted John Guymon in attempting to hand deliver a letter to Scott Litsey, at his home at the Aspen Village apartments. On this day, I knocked on his door to deliver the letter, and the door was not answered. The letter was left at the foot of the door, in the enclosed hallway outside his apartment door.

I became acquainted with Scott during the final editing of the original patent application, in the month of December, 2015. Scott and I assisted John with the final editing and printing of the application, in order to meet certain submission deadlines.

**DRAWINGS—Figures**

In the drawings, closely related figures have the same number but different alphabetic suffixes.

Fig 1 shows isometric view of the 'Electronic Surety Bail Bond' Digital Commerce Compound Electronic Document with it's self embedded 'Power of Attorney' Electronic Document.

Fig 2, 2a to 2n shows simple Empty Document (Blank/BASE64/Any).

Fig 3a and 3b shows the digital signature logic and embodiment assembly for the legally binding 'Power Of Attorney' Electronic Document, shown digitally signed using the PKCS1 (RSA-SHA1) signature algorithms. (Could use DSA or/as well) (Figs of flowchart, pseudo code and overall assembly)

Fig 4 shows the various integrated ISO Specifications and W3C Recommendations supporting the Vendor Independent existence of the Electronic Document.

Fig 5, 5a to 5n shows processing capabilities, specifically building process document generation for handling outward recording processing, and reporting process document dissemination for handling inward reporting processing.

DETAILED DESCRIPTION—FIRST EMBODIMENT—FIGS.

Static description of figures. Method of commerce . 17 Secured unalterable digital commerce electronic document

Both in single sub-entity allows a stepping between, therefore introduces opportunity. Memory file, stack frame, has this embedded /recursion/way about it naturally. SO IT DOES HUMAN INTERACTION Graphic first, then xml process, which comes with 2<sup>nd</sup> "interaction when the computer asks the human "Is this the data?"

Comments Field: Boils down to binary outside and text inside. Preferably at the top, and preferably to where the filetype will not cause too many problems if opened with a text editor. Such things in said invention are all free of vendor interaction and easy to use, therefore being the most efficient process device apparatus system method

ISO standard; Secure; Abundant CRCs, dig sigs, and finally visual confirmation, and then FINALLY A NEW SET OF SIGNATURES>

Cut and paste can occur of xml to continue movement of data. (Even if there is a set of signatures?)

Use PNG to compress random data. 64 to 6 bit. With this option, the xml to 6 bit, the PNG becomes able to host things.

Remember, PNG has inner chunk CRC validation (keeps data at lower levels proper)  
Remember, VV or has outside, plus the graphic equivalent=SECURE  
Plus XML

Old PNG can be xml'd and signed without changing visual

Remember, if xml has stuff in it, then limited on type or version, whereas, if entered around the worlds best graphic type that's supported worldwide, any embedding 8/16 (character sets all in) do (256x256 ect grid)

XML can be description of graphic. Graphic can be art of text/keys,ect. Graphic can have 'hash' of XML Graphic can be interpreted key for the XML (Ex pic of zebra='ZEBRA', or other codeword, as well as 'embedded' values (this would be key chain)

8 bit 1.0 xml can be carrier of all Blob/file/chunk/ect

36 The xml of a foreign or MBCS, or any futuristic Blob can be simply encoded in base64

Patent Application of John Lewis Guymon Jr for  
"Method And Process, Apparatus And Manufacture For The Secured Unalterable Vendor  
Independent Digital Commerce Electronic Document - IntelLEDoc"

Page 8

SBCS works in text chunks, DBCS works in the iTXT, MCS can be base64 and which is a standard xml encoding scheme

NEW:Cross platforms environment for either on or both (therefore the invention) for the creation, reading, printing, processing, programming.

Format that can be carried, such as via email or zip file or other box.

Has caps based on the application and the memory allocated.~~The inventions limit is based only on the functionality of the api/lib and memory constraints on said system.~~

all browser /applications all text pad/processors

23 anyway at any point in this multi-layered secure document is proven safe at all times

Code word on phone or in email or other correspondence could be a partial key to veering the document's integrity

?15 device independent bitmap

?PNG=all common # of apps support

#### OPERATION—FIRST EMBODIMENT—FIGS.

Memory file, stack frame, has this embedded /recursion/way about it naturally. So does human interaction

Hash algorithm grid (Does it matter the hashes break? NO! They are not fail proof; however, in combination with Vendor Verify, become that way

Vendor Verify – Sub figures, one way/two way example of a coorespondance, keys, hash

#### Operational description of figures

##### Advantages

Having the PNG as already rested reviewed" ok, esp our side digital signature

Having xml as tested especially in all locations, as 8 bit at the leatr is very possible

15 device independent bitmap

PNG=all common # of apps support

#### DESCRIPTION—ALTERNATE EMBODIMENT—FIGS.

Static description of figures

In re: Correction of Inventorship – Intelledoc® Application #12/316699 filed December 15, 2008

Dear Mr. Douglas Scott Litsey,

This letter confirms the forthcoming filing of the Correction of Inventorship petition for iBailBonding.Com's Intelledoc® Securable Independent Electronic Document application of patent with the United States Patent and Trademark Office as previously discussed. Advised by counsel and pursuant to 35 U.S.C. §116, the proper and accurate representation of the application requires the removal of your name as a listed inventor due to a misunderstanding of patent inventorship.

Following 37 U.S.C. §1.41, a patent is applied for in the name or names of the actual inventor or inventors. Listing you on the application as a kind gesture of friendship and the recognition of a new member to the iBailBonding.Com's team and not for actual contribution to the invention's conception was a mistake, pursuant to 35 U.S.C. §101, one made without deceptive intent, and has rendered the initially executed declaration invalid. A correction of inventorship under 37 U.S.C. §1.48 and consequent submission of a supplemental oath or declaration by only the actual inventors, following 37 U.S.C. §1.67 for amendment is therefore required. A copy of the initial declaration has been included with this letter for your review.

Pursuant to 37 U.S.C. §1.48(a), effective March 19, 2013, the correction of an application's inventorship of removing a listed inventor can be done without statement from the person who is to be deleted. Previous corrections per 37 U.S.C. §1.48 effective September 13, 2004 required such statement, however, and seems to present a more fair and proper approach. With this, we have included a typed statement for you to sign and return to us for filing in support of and amendment to iBailBonding.Com's Intelledoc® application for patent's petition for 'Correction of Inventorship' as set forth and properly presented.

The correction of inventorship in no way affects the 'GLE (Guymon Litsey Envelope)' you have developed, having the 'GLE' application of patent offering you correct inventorship listing as a first named inventor. Further, with negotiated contract offering compensation for your contribution to the Intelledoc® product, you are positioned well for marketing, implementation and future use of all products involved.

Understandably this correction has required an adjustment on your behalf. However, notwithstanding the confirmed acknowledgment of invention conception substantiated with physical evidence supporting applicant John Lewis Guymon Jr as the first actual and sole inventor, your recent unprofessional behavior and continued demand of inventorship listing on the Intelledoc® application of patent, after discussion and incurred understanding of Article 1, Section 8, Clause 8 of the United States Constitution and Patent law 35 U.S.C. §116, has raised concern and needs to be addressed.

As previous requests of your input for a true and proper consideration of your contribution have gone without reply, we desire to continue to work amicably towards any acknowledgement of your inventorship and again ask for your help in understanding your position as you feel meets the guidelines invention conception.

CS 2

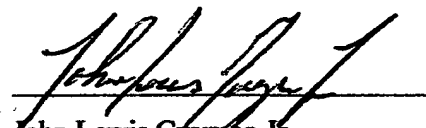

If you do not wish to sign and return the enclosed statement of no deceptive intent, having, if proper, the confirmation of your inventorship contribution as your desire, we wholeheartedly support your filing of a supplemental oath or declaration with the United States Patent and Trademark Office, pursuant 37 U.S.C. §1.63 subject to criminal punishment under 18 U.S.C. §1001 as well as civil liability for damages incurred from false or misleading statements made under oath or in declaration.

We insist that you feel comfortable with this correction process and ask what can be done to help you with this transition. As previously stated, negotiated contract for your position in marketing and implementation of our Intelldoc® serviced electronic documents products, as you have indicated as your desire since joining us, is encouraged and we believe this to be fair of best served interests in going forward given the problem of the incorrect listing of your name as an inventor and we look forward to your assistance.

Included is a self-addressed postage prepaid envelope for returning the signed statement. If we do not receive the signed statement or declaration within thirty (30) days from the receipt of this letter we will take such as your refusal to participate and will file the petition pursuant to 37 U.S.C. §1.48(a).

Thank you for your help with this matter. If you have any comments or questions or if I can be of further assistance in any way please feel free to contact me via email at Admin@iBailBonding.Com.

Best regards,

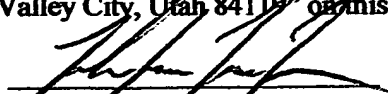

John Lewis Guymon Jr

In re: Correction of Inventorship – Intelledoc® Application #12/316699 filed December 15, 2008

Dear Mr. Douglas Scott Litsey,

This letter serves as final notice of the requirement and intended filing of a Correction of Inventorship pursuant to 37 C.F.R. §1.48 for the Intelledoc® Securable Independent Electronic Document application of patent filed December 15, 2008 serial #12/316699.

Due to your purposely-intended refusal of the acceptance of previous letters sent with signature request, this letter has been delivered first class normal delivery to ensure receipt. With our discussion Thursday September 11, 2014 during which time you acknowledged receipt of a pending letter sent with signature requirement from us, it became clear and readily apparent your contribution has been with the marketing and use of the electronic document invention, and not of its concept. The conversation we had reaffirms our position and acknowledgement that listing your name as an inventor on the application was indeed a mistake made without deceptive intent.

The acceptance of previous letters sent to you would have helped confirm communication of your options for us working together. As stated previously as well as here, our intention is to file a Correction of Inventorship petition to correct the named inventors on the application as they were incorrectly listed with the initial submitted application, having us both misunderstand the qualifications for patent inventorship. A new oath or declaration is required in place of the initial declaration submitted with the initial application. For your review, a copy of the initial declaring has been included with this correspondence. We do not require you to submit a new oath or declaration but would like you to sign and return to us a letter in agreement of the correction, a copy of which is enclosed, to facilitate a proper filing of our petition for Correction of Inventorship.

As previously noted, this statement, required for 37 C.F.R. §1.48 prior to March 2012, is no longer necessary for inventorship correction but remains a desired addition for our petition filing. We requested that you sign and return the enclosed statement in support of correction using the preaddressed postage paid enveloped included.

Our desire is to continue to work amicably toward resolution and would like to give you proper time for response. We plan to file the correction within 10 days of your receipt of this letter. Previous correspondence presented a 30-day response time; however with conversations we've had since September, we feel this shorted time for response is fair and allows us to continue as necessary. Our first letter sent September 9 has been returned and can no longer be delivered. A second letter sent November 12, 2014 is still available for pickup and it is encouraged for you to take receipt. Although previous letters presented more contractual details, we are still open to negotiations for your contribution to the project and desire to continue discussion of available options to you and welcome your response in doing so.

Intellectoc® Application #12/316699 filed December 15, 2008.

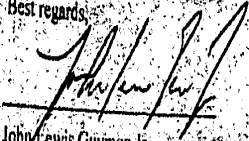

BailBonding.com  
Page 2 of 2

We look forward to your signed statement or e-mail correspondence requesting help or additional information. During the 10 day period for response I believe you and I will personally talk again and I'm sure that you will understand this process regardless if you receive the second letter or not.

If you have any questions concerns or other information that you would like to share with us please send correspondence to the email address Admin@BailBonding.Com.

Thank you for your help with this letter matter.

Best regards,

John Lewis Guymon Jr

As previous requests of your input for a true and proper consideration of your contribution have gone without reply, we desire to continue to work amicably towards any acknowledgement of your inventorship and again ask for your help in understanding your position as you feel meets the guidelines invention conception.

MS

If you do not wish to sign and return the enclosed statement of no deceptive intent, having, in proper, the confirmation of your inventorship contribution as your desire, we wholeheartedly support your filing of a supplemental oath or declaration with the United States Patent and Trademark Office, pursuant 37 U.S.C. §1.63 subject to criminal punishment under 18 U.S.C. §1001 as well as civil liability for damages incurred from false or misleading statements made under oath or in declaration.

We insist that you feel comfortable with this correction process and ask what can be done to help you with this transition. As previously stated, negotiated contract for your position in marketing and implementation of our Intelledoc® serviced electronic documents products, as you have indicated as your desire since joining us, is encouraged and we believe this to be fair of best served interests in going forward given the problem of the incorrect listing of your name as an inventor and we look forward to your assistance.

Included is a self-addressed postage prepaid envelope for returning the signed statement. If we do not receive the signed statement or declaration within thirty (30) days from the receipt of this letter we will take such as your refusal to participate and will file the petition pursuant to 37 U.S.C. §1.48(a).

Thank you for your help with this matter. If you have any comments or questions or if I can be of further assistance in any way please feel free to contact me via email at Admin@iBailBonding.Com.

Best regards,

John Lewis Guymon Jr

**Applicant's Oath of Certification of Entity Status and Correction of Inventorship**

October 2<sup>nd</sup>, 2013

Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

Sir/ Madam:

Comes now, Applicant John Lewis Guymon Jr, states and swears:

I have read this form and all relevant instructions, whether on this form, or on another. I certify that all statements made on this oath in support of this Application's:

**Certification of Micro Entity Status  
and  
Correction of Inventorship**

for Application, Serial Number 12/316,699, are true and correct to the best of my knowledge and belief, and I understand that such statements are being relied upon by the USPTO, and that they are subject to verification. I have read this entire form before signing it. I am personally responsible for the accuracy of the information provided on this application, and any attachments. I also understand that the making of any willful false statement of material fact on this application including the attached sheet(s) will subject me to the provisions of the penal law relevant to the making and filing of false statements.

Therefore, Applicant further states and swears by oath that he is unable to obtain a Certification of Micro Entity Status from named inventor Douglas Scott Litsey. Further, Applicant further states and swears by oath that Applicant is in the process of the Correction of Inventorship for the removal of Douglas Scott Litsey as he has incorrectly, as Applicant truly believes, been named as a co-inventor. Further, Applicant is in the process of said Correction of Inventorship and will submit the required materials for such process immediately, without delay, pending the completed gathering of information and supporting evidence. Applicant will have the Correction of Inventorship to the USPTO no later than October 16th, 2013, giving Applicant two (2) weeks to do so if indeed allowed and accepted by the USPTO

Very respectfully,

[Seal]

**Supplemental Declaration Of Inventorship**

August 20, 2015

Mail Stop Petitions  
Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

Ref: Intelledoc® Securable Independent Electronic Document, Ser #12/316699, filed December 15, 2008

Sir / Madam:

Comes now Applicant, John Lewis Guymon Jr, in accordance to Applicant's 'True And Correct Information Statement' below, HEREBY states and swears:

I have read this form and all relevant instructions, whether on this form, or on another and that I certify that all statements made on this declaration as well as all exhibits and schedules hereto, as an integral part of this declaration deemed incorporated by reference herein, are in support of this application's inventorship; THEREFORE, Applicant further states and swears:

**Inventorship**

1. Applicant, a citizen of the United States of America, is the original, first and sole inventor responsible for the conception, generation and formalization of the Intelledoc® Securable Independent Electronic Document presented in the above listed application.

**True and Correct Information Statement** - Statements made on each and all pages of this 'Supplemental Declaration of Inventorship' are true and correct to the best of my knowledge and belief, and I understand that such statements are being relied upon by the United States Patent and Trademark Office, and that they are subject to verification. I have read this entire form before signing it. I am personally responsible for the accuracy of the information provided on this declaration and any attachments. I understand that the making of any willful false statement of material fact with this declaration including the attached sheet(s) will subject me to the provisions of the penal law under 18 U.S.C. §1001 relevant to the making and filing of false statements or the like, punishable by fine or imprisonment, or both.

[5-2217-13318]

## Desideratum

2. Applicant became involved in writing software for the bail bonding and surety industries in July 1999. As development continued, Applicant realized the need of and reason for an electronic document that was vendor, operating system, and platform independent that could be secured as desired per user requirements. The realization of the need for a securable independent electronic document brought conception, generation and production of the Electronic Surety Bail Bond, which became the basis for the Intelledoc<sup>®</sup> serviced electronic document template.

3. The process of scanning paper documents into the computer system was always problematic and overall redundant. The Intelledoc<sup>®</sup> servicing of electronic document is designed so that one could create the document picture and add internal data, electronic and/or digital signatures on either the image or internal data or both as well as other security measures, thus allowing a document to be completed upon its original first generation cycle.

## Conception

4. Applicant's research started in 1999. Conception of the Intelledoc<sup>®</sup> service template document, an electronic document container format supporting all types of secure electronic information exchange, was established on or before October 2000 with the creation of the Electronic Surety Bail Bond document. The surety bail bond document was the first document type required in Applicant's field of practice and is built upon the template document and contains properties and attributes specific to the bail bonding industry's surety power of attorney handling. Other documents used in the industry could also be built using the Intelledoc<sup>®</sup> serviced template and would be uniquely defined using different document type specific attributes.

**True and Correct Information Statement** - Statements made on each and all pages of this 'Supplemental Declaration of Inventorship' are true and correct to the best of my knowledge and belief, and I understand that such statements are being relied upon by the United States Patent and Trademark Office, and that they are subject to verification. I have read this entire form before signing it. I am personally responsible for the accuracy of the information provided on this declaration and any attachments. I understand that the making of any willful false statement of material fact with this declaration including the attached sheet(s) will subject me to the provisions of the penal law under 18 U.S.C. §1001 relevant to the making and filing of false statements or the like, punishable by fine or imprisonment, or both.

5. The Intelledoc<sup>®</sup> electronic document container supports recursion and is built so that behavior starts with an inert binary image container and can contain embedded marked up (XML) text. The embedded data can then contain any other type of data including nested electronic document containers. Having an XML or other type of file as the main file type removes the intrinsic visual image wrapper. Additionally, the inert binary image container can be navigated through information systems without limitations.

6. Applicant registered iBailBonding.Com, a 'dba' type company based in Utah on April 20, 2001. Knowledge of the operations of notary publics, through the familiarization of procedures, with the help of a licensed family member, assisted Applicant in working in parallel with government individuals, pioneering digital signature laws and statutes, in Applicant's home state of Utah. Further, Applicant realized, conceived of, produced and confirmed the Intelledoc<sup>®</sup> servicing of electronic documents, testing multiple prototypes of the invention's Electronic Surety Bail Bond document during the early years of the Millennium when the digital signature law and statute of today, (UETA & E-Sign), were still under draft to be written. [See Applicant's Exhibit 'A' – 'iBailBonding.com DBA Registration', Exhibit 'D' – 'Utah Digital Signature Act' and Exhibit 'E' – 'John Marshall Journal' attached to and included herein.]

7. Development was started with an Internet based environment and later migrated to stand-alone based applications. Initial draft of a product manual from research notes and other details documented in engineering style bound notebooks dated at least as soon as 1999 was started June 2001. [See Applicant's Exhibit 'F' – 'Manual 1999', Exhibit 'Pre-H' – 'Information Data Sheet Notes 2001', Exhibit 'H' – 'Electronic Bond Notes 2001', Exhibit 'I' – 'IBB Document' and Exhibit 'J' – 'Notebook Notes Black & Burgundy Oct 8 2001' attached to and included herein.]

8. Proof of the conception and ownership of the Intelledoc<sup>®</sup> based Securable Independent Electronic Document container, the template used in the generation of a variety of different document types, is proven and verified in the various engineering notebooks, source code developments, research works, document disclosures, information disclosures, as well as a multitude of other items of material and electronic data completing Applicant's work.

**True and Correct Information Statement** - Statements made on each and all pages of this 'Supplemental Declaration of Inventorship' are true and correct to the best of my knowledge and belief, and I understand that such statements are being relied upon by the United States Patent and Trademark Office, and that they are subject to verification. I have read this entire form before signing it. I am personally responsible for the accuracy of the information provided on this declaration and any attachments. I understand that the making of any willful false statement of material fact with this declaration including the attached sheet(s) will subject me to the provisions of the penal law under 18 U.S.C. §1001 relevant to the making and filing of false statements or the like, punishable by fine or imprisonment, or both.

## Reduction

9. Initially different documents were available for generation via web site scripting code and OCX based controls in 2000. The first bond document, generated from user-entered data, was printed as a negative image at an acquaintance's home around this time. Web application program processing, with a firm understanding of the product's requirements was well established by January 2001. Different document types were able to be generated and were printed together via a stand-alone application in 2003. [See Applicant's Exhibit 'B' – 'Website registrations', Exhibit 'G' – 'ASP file list – Firsts – 2000 thru 2002', Exhibit 'K' – 'Digital Signature Certificate - JG' and Exhibit 'L' - 'Digital Signature Certificate - VG' attached to and included herein.]

10. Applicant achieved actual reduction to practice of a working prototype of the Intelledoc<sup>®</sup> serviced electronic document on or around February 2003. Conception of the Intelledoc<sup>®</sup> serviced Securable Independent Electronic Document invention was complete, proven and supported by Intelledoc<sup>®</sup> serviced electronic document prototypes, having invention's conception, presented claims and specified features completely proven by said prototype documents. [See Applicant's Exhibit 'O' – 'XML Signature Syntax W3C 12 Feb 2002', Exhibit 'P' – 'Bond 1', Exhibit 'P2' – 'Bond 2' and Exhibit 'N' – 'ASP Report' attached to and included herein.]

11. Applicant realized, conceived, and derived all supporting information of originally drafted and amended claims describing the invention from the conceptual beginning, having all claims and all portions and elements of the claims functionality realized. Elements of the claims are noted in the 5 different sections of the Electronic Surety Bail Bond document. [See Applicant's Exhibit 'M' – 'Electronic Surety Bail Bond - Proposal Document' attached to and included herein.]

12. Applicant created seven (7) different documents, based on the Intelledoc<sup>®</sup> template, for the Bail Bonding software application that was under development at the time. These documents include the surety

**True and Correct Information Statement** - Statements made on each and all pages of this 'Supplemental Declaration of Inventorship' are true and correct to the best of my knowledge and belief, and I understand that such statements are being relied upon by the United States Patent and Trademark Office, and that they are subject to verification. I have read this entire form before signing it. I am personally responsible for the accuracy of the information provided on this declaration and any attachments. I understand that the making of any willful false statement of material fact with this declaration including the attached sheet(s) will subject me to the provisions of the penal law under 18 U.S.C. §1001 relevant to the making and filing of false statements or the like, punishable by fine or imprisonment, or both.

bond as well as various other documents, supporting the idea of the Intelledoc<sup>®</sup> document template. - These seven (7) documents were printed from bonding application used to input data. These different documents were under development as separate unique documents since 2001. The idea to patent the Intelledoc<sup>®</sup> serviced document container was thought of around February 2006 along with the idea of securing the product's name, logo and other supporting information and identification art. [See Applicant's Exhibit 'Q' – 'Multiple Document Suite' attached to and included herein.]

13. Applicant attended a State of Utah Insurance committee meeting and proposed posting bail bonds electronically and obtained preliminary acceptance to such posting. [See Applicant's Exhibit 'R' - 'Dept Insurance Posing Electronically Letter' attached to and included herein.]

## Substantiation

14. The Intelledoc<sup>®</sup> electronic document allows custom unique platform independent user-specified security features allow for intrinsically securing the document as the user desires. This open independent security implementation capability, VendorVerify<sup>™</sup>, was solely and completely realized, conceived, deduced and implemented by Applicant and allows flexible security feature implementation and usage as desired by the electronic document creator, user, involved third party or other involved party. The VendorVerify<sup>™</sup> security feature implementation ability was realized and conceived as early as 2002 and was part of the initial Electronic Surety Bail Bond product and seamlessly propagated to the Intelledoc<sup>®</sup> electronic document invention. Applicant documented the VendorVerify<sup>™</sup> process in the Electronic Surety Bail Bond Proposal Document as early as 2005. [See Applicant's Exhibit 'M' – 'Electronic Surety Bail Bond' attached to and included herein.]

15. Applicant filed Disclosure Document “Intelledoc<sup>®</sup> – Intelligent Electronic Document”, Serial No. 610142, (December 2006), filed Disclosure Document “eSuretyBailBond - Electronic Surety Bail Bond”, Serial No. 610141, (December 2006) and “Online Electronic Surety Bail Bond Process”, Serial No. 610364, (December 2006). [See Applicant's Exhibit 'U' – 'Disclosure Document - eSuretyBailBond 610141',

**True and Correct Information Statement** - Statements made on each and all pages of this ‘Supplemental Declaration of Inventorship’ are true and correct to the best of my knowledge and belief, and I understand that such statements are being relied upon by the United States Patent and Trademark Office, and that they are subject to verification. I have read this entire form before signing it. I am personally responsible for the accuracy of the information provided on this declaration and any attachments. I understand that the making of any willful false statement of material fact with this declaration including the attached sheet(s) will subject me to the provisions of the penal law under 18 U.S.C. §1001 relevant to the making and filing of false statements or the like, punishable by fine or imprisonment, or both.

Exhibit 'V' – 'Disclosure Document - Intelledoc® 610142' and Exhibit 'W' – 'Disclosure Document - Online ESBB Process 610364' attached to and included herein.]

16. Document was conceived, designed, built, tested and proven before the first court systems could receive the document. An initiative from the Department of Justice promoted global sharing of data and was supported with grants to help to implement the XML processing of documents within various state Court systems. Applicant worked to support the NIEM standardized Bond Document. [See Applicant's Exhibit 'S' - 'State Justice NIEM' attached to and included herein.]

17. Applicant applied for Intelledoc® trademark in May 2008 and is the first and sole owner of the registered trademark. Further, Applicant mitigated initial opposition to the trademark and successfully brought solution for the trademark's official registration December 15, 2009, Reg. No. 3,724,305. [See Applicant's Exhibit 'C' – 'Trademark Registration' attached to and included herein.]

18. Overall Applicant utilized over 30 bound engineering type notebooks, generated more than 10000 individual pages of notes and printouts, generated a large array of data CD's and developed on at least 6 different computing systems. [See Applicant's Exhibit 'T' – 'Image - Notebooks' attached to and included herein.]

19. Development was first for a web interface and then for an stand-alone application. Applicant developed an array of different type documents that were printed together via iBailBonding.Com's web site. Application development consists of over 200k lines source code. Website development consists of over 120k lines source script. Source control was used and contains over 25000 entries. During the course of development there were over 880 Intelledoc® serviced documents generated. [See Applicant's Exhibit 'Z' – 'Directory Properties - EB' attached to and included herein.]

**True and Correct Information Statement** - Statements made on each and all pages of this 'Supplemental Declaration of Inventorship' are true and correct to the best of my knowledge and belief, and I understand that such statements are being relied upon by the United States Patent and Trademark Office, and that they are subject to verification. I have read this entire form before signing it. I am personally responsible for the accuracy of the information provided on this declaration and any attachments. I understand that the making of any willful false statement of material fact with this declaration including the attached sheet(s) will subject me to the provisions of the penal law under 18 U.S.C. §1001 relevant to the making and filing of false statements or the like, punishable by fine or imprisonment, or both.

## Prosecution

20. All United States Patent And Trademark Office correspondence replies, amendments, patent searches, information disclosure development, document disclosure submission, company formation and trademark work to date has been done and is owned by Applicant.

21. All replies to the office action or other correspondence involving patent filing or prosecution with the United States Patent and Trademark Office to date were authored and submitted by Applicant, having Applicant responsible for and provider of all patent research for said reply submissions. All replies to the office action or other correspondence involving trademark filing or prosecution with the United States Patent and Trademark Office, or third party entities, to date, were authored and submitted by Applicant, having Applicant responsible for and provider of all trademark research for said reply submissions.

22. Applicant is solely responsible and completed all patent application authorship, writing layout and formatting as well as all content generation and production of all parts of application, specifically the application's specification, claims, drawings, title, abstract, embodiments, and conclusion, having final draft editing assistance from others. Applicant paid for supplies and miscellaneous costs for documentation development and educational references and other obtained knowledge

23. Applicant was and is solely responsible for all fees and costs required for all patent and trademark application filings, prosecution or other fee related submissions, having financial assistance from family or friends to help with payment of some of these costs.

24. Applicant was solely responsible for and completed all Information Disclosure work, including research, categorization and content submission. Applicant's submitted Information Disclosures show search dates of prior art starting in the year 2000, the area of time of invention conception. Applicant's research was done nearly seven years before any other person's involvement, having conception of the invention near

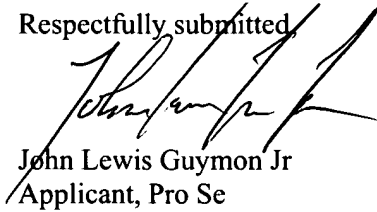

**True and Correct Information Statement** - Statements made on each and all pages of this 'Supplemental Declaration of Inventorship' are true and correct to the best of my knowledge and belief, and I understand that such statements are being relied upon by the United States Patent and Trademark Office, and that they are subject to verification. I have read this entire form before signing it. I am personally responsible for the accuracy of the information provided on this declaration and any attachments. I understand that the making of any willful false statement of material fact with this declaration including the attached sheet(s) will subject me to the provisions of the penal law under 18 U.S.C. §1001 relevant to the making and filing of false statements or the like, punishable by fine or imprisonment, or both.

the time the first searches were done to determine confirmation of the existence of prior art if available. Applicant filed several Information Disclosures for both article and patent references. Applicant's research and documentation of said research is of approximately 1400 references, some in paper form, having over 700 submitted electronically via CD medium by Applicant, on record with the United States Patent And Trademark Office by way of Applicant's multiple Information Disclosure filings. Many of the citations have been noted having approximately 300 exist in paper form and have not been electronically submitted. Applicant's patent and application of patent research consists of approximately 500 patents or patent applications references, having these references on record with the United States Patent And Trademark Office by way of Applicant's multiple patent research Information Disclosure filings. Applicant submitted correspondence relating to an inventions conception via multiple document disclosures. Dates of conception were declared and listed within said disclosures, having said disclosed conception dates actually occurring earlier than recorded. [See Applicant's Exhibit 'X' - 'Information Disclosure Summary - Articles' and Exhibit 'Y' - 'Information Disclosure Summary - Patents' attached to and included herein.]

## Conclusion

25. Applicant believes he has been fair and diligent in the determination of Inventorship and, based on true and correct knowledge, information and beliefs as well as the sole ownership of clear and convincing material evidence Applicant is the sole inventor of the Intelledoc® Securable Independent Electronic Document.

Respectfully submitted,

  
John Lewis Guymon Jr  
Applicant, Pro Se  
1635 East 7080 South

**COMMENT: Misplaced Priorities: The Utah Digital Signature Act and Liability Allocation in a Public Key Infrastructure \***

Summer, 1996  
33 San Diego L. Rev. 1143

**Author**

C. Bradford Biddle \*

**Excerpt**

**I. Introduction**

On March 9, 1995, the Utah Digital Signature Act (the "Utah Act") was signed into law. <sup>1</sup> Complex and ambitious, the Utah Act is intended to promote the use of digital signatures on computer-based documents and to facilitate electronic commerce. <sup>2</sup> The Utah Act implements an infrastructure in which computer users utilize "certification authorities," online databases called repositories, and public-key encryption technology in order to "sign" electronic documents in a legally binding fashion. In addition to setting out a regulatory scheme designed to implement this infrastructure, the Utah Act provides certain digital signatures with legal status as valid signatures and addresses a variety of issues relating to the status of digitally-signed electronic documents in contract and evidence law.

The potential benefits of the "public key infrastructure" implemented by the Utah Act are considerable. Conceivably, a well-functioning public key infrastructure could allow private individuals, businesses, and government to routinely and securely conduct personal, financial, and legal affairs over open networks like the Internet. <sup>3</sup> Legislation can potentially facilitate the development of this type of infrastructure. As the Utah Act illustrates, legislation can clarify the arguably uncertain legal status of digital signatures, determine liability standards in an emerging and unprecedented certification authority industry, clarify the rights and responsibilities of infrastructure participants, and address other important public policy concerns. In light of the significance of these issues, it is not surprising that more than ten states are following in Utah's footsteps and developing ...

## The John Marshall Journal of Information Technology & Privacy Law (<http://repository.jmls.edu/jitpl>)

### Article Title

The Utah Digital Signature Act As "Model" Legislation: A Critical Analysis, 17 J. Marshall J. Computer & Info. L. 873 (1999)  
(<http://repository.jmls.edu/cgi/viewcontent.cgi?article=1264&context=jitpl>)

### Authors

R. Jason Richards ([http://repository.jmls.edu/do/search/?q=author\\_iname%3A%22Richards%22%20author\\_fname%3A%22R.%22&start=0&context=3516212](http://repository.jmls.edu/do/search/?q=author_iname%3A%22Richards%22%20author_fname%3A%22R.%22&start=0&context=3516212))

### Abstract

With the current reliance on virtual transactions, the actual source and the authenticity of electronic transmissions must be determined. In realizing this need, Utah was the first state to pass legislation regarding the verification of electronic communications. In 1995, the legislature passed the Utah Digital Signature Act (the "Utah Act"), which mandates the creation of certification authorities - cybernotaries. In addition, the Division of Corporation and Commercial Code would administer rules to facilitate the implementation of the Utah Act. Since the codification of the Utah Act, over 35 states and jurisdictions implemented some form of digital or electronic signature legislation, which was either based in part or mimics the Utah Act. However, many provisions of the Utah Act are vague, ambiguous or insufficient to the point that the Act creates doubts as to the law's effectiveness. Ten provisions of the Utah Act diminish the precision and the effectiveness of the statute's ability to regulate certification authorities and to provide adequate guidance and protection for recipients and senders of electronic transmissions. These areas of the statute relate to: the record-keeping system; the requirements for licensing of certification authorities; criminal convictions prohibiting the licensing of a certification authority; the recommended reliance limits; the suitable guaranty; residency requirements for certification authorities; limited liability for certification authorities; the evidentiary presumption of digital signatures; and the reasonable care standard for private key holders. While the Utah Act purports to facilitate commerce through reliable messages, the failure to consider the practical application and implications of these ten provisions places the statute in the unintended position of fostering uncertainties that generate more confusion as to how digital and electronic signature legislation work together. In certain areas, comparing and contrasting the certification authorities to the notary publics, evaluating public policy concerns or examining long-term effects on the perception of digital signatures clearly illustrates Utah's failure to consider many legal and policy issues. The suggestions are a means of increasing the precision of the Utah Act and to allow the statute to resolve uncertainties instead of creating them. Furthermore, by calling attention to the weaknesses of the Utah Act, the author hopes that the states using the Utah Act as a model statute will act accordingly to correct these problems. In essence, without implementing the author's suggested changes, the Utah Act remains confusing, vague and insufficient to address the needs of verification of electronic transmissions in cyberspace. Effective practice and regulation of certification authorities are possible, but the deficiencies of Utah Act must first receive significant attention.

# Installing Grep

## Installation of Grep

Install Grep by running the following commands:

```
root@grep-2.4.2# CPPFLAGS=-Dre_max_failures=re_max_failures2 \  
> ./configure --prefix=/usr --disable-nls \  
root@grep-2.4.2# make LDFLAGS=-static \  
root@grep-2.4.2# make prefix=$LFS/usr install
```

---

## Contents

The grep package contains the egrep, fgrep and grep programs.

---

## Description

### egrep

egrep prints lines from files matching an extended regular expression pattern.

---

### fgrep

fgrep prints lines from files matching a list of fixed strings, separated by newlines, any of which is to be matched.

---

### grep

grep prints lines from files matching a basic regular expression pattern.

---

## Abstract

This document specifies XML digital signature processing rules and syntax. XML Signatures provide *integrity*, *message authentication*, and/or *signer authentication* services for data of any type, whether located within the XML that includes the signature or elsewhere.

## Status of this document

This document has been reviewed by W3C Members and other interested parties and has been endorsed by the Director as a W3C Recommendation. It is a stable document and may be used as reference material or cited as a normative reference from another document. W3C's role in making the Recommendation is to draw attention to the specification and to promote its widespread deployment. This enhances the functionality and interoperability of the Web.

This specification was produced by the IETF/W3C XML Signature Working Group ([W3C Activity Statement](#)) which believes the specification is sufficient for the creation of independent interoperable implementations; the [Interoperability Report](#) shows at least 10 implementations with at least two interoperable implementations over every feature.

State Of Ut

**UNDERTAKING  
OF BAIL**

John Lewis Guymon  
DOB: 07/28/66  
SSN: 528990123

Case No.: CaseNumHERE  
Judge: Judge Johnson

An order was made on the date of April 24, 2002 by the above court, that the defendant be held to answer upon the charges of

Code Number HERE 9999 Cash only

Bail was set in the amount of \$123,456,789.00 dollars.

We, iBailBonding.Com, a licenced company in the State of Utah as surety, hereby undertake that the defendant will appear and answer to the charges mentioned above in whatever court it may be required to appear in. We hold him/her self amenable to other orders and process of the court, and if convicted, we will render him/herself in execution thereof, or if he/she fails to perform any of these conditions, we will pay to the above named court the sum of \$123,456,789.00 dollars. If iBailBonding.Com does not make payment within 180 days after failure to appear of the defendant, judgment shall be entered on motion of the Prosecuting Attorney with notice, against us as sureties, for the amount set forth above.

The above undertaking is hereby accepted, and sureties approved this \_\_\_\_ day of \_\_\_\_\_, 20\_\_

Judges Signature

THE STATE OF TEXAS  
COUNTY OF ELLIS

Know All Men By These Present:

THAT I, Kenneth Wayne Ramirez, as Principal, and SAFETY NATIONAL CASUALTY CORP., AAA Bail Bonds as sureties are held and firmly bound unto the State of Texas in the penal sum of [WORDS]20000.00 (\$20000.00) dollars, for the payment of which sum, well and truly to be made, we bind ourselves, our heirs, executors, and administrators, jointly and severally by these present.

N2

The Condition of the above obligation is such that whereas the above named principal stands charged with the listed offense(s), to-wit:

Felony Code 11.01 PC9 over 4 gm Under 200 20000

in Cause No. 26,348CR in the Ellis-Other Court Court of Ellis County, Texas.

NOW, if the said Kenneth Wayne Ramirez shall well and truly make his appearance before said court instanter, or upon notice of the court and further shall well and truly make his personal appearance before any Court or Magistrate to which said charge may be transferred or before whom this cause may hereafter be pending at any time when, and any place where his presence may be required under the Code of Criminal Procedure of the state of Texas or by any Court of Magistrate, and for all subsequent proceedings had relative to said charge and there remain from day to day and term to term until discharged by due course of law, then and there to answer the said accusations against his, then this obligation shall become null and void; otherwise to remain in full force and effect.

This Bond shall also be conditioned that the principal and sureties, if any, will pay all necessary and reasonable expenses incurred by any and all sheriffs and peace officers in re-arresting the principal in the event he fails to appear before the Court or Magistrate named in this bond at the time stated.

Signed this \_\_\_\_\_ day of \_\_\_\_\_, \_\_\_\_\_.

(Principal) Kenneth Wayne Ramirez  
1246 Maraco

Approved on this \_\_\_\_\_ day of \_\_\_\_\_, \_\_\_\_\_.

Dallas Dallas TX 75211

Magistrate(Judge)  
Or Ray Stewart, Ellis County Sheriff

### Electronic Surety Bond

*Laws to cater to not - Law of*

*Security  
+ safety*

#### Introduction

When you use iBailBonding, the Internet, and PKI (Public Key Infrastructure) together, it is more secure to issue surety bonds, and more cost-effective. With every step of technology (the changes are included, there is a point ... changes occur that are timely possible, and are necessary. As technology steps, changes occur.). The process is simple, its implementation is via collection of web pages.

We are iBailBonding.com. We will collect, accept, approve, ask, then deliver the bond. Accounting and administrative things can be done. One step confirmation of bond ensures its Delivery intent, allowing a dynamically monitored real time of the events that follow.

*NEC to  
frank, in  
account*

#### Purpose

Many purposes exist for the need of the electronic bond. Over a year, new systems continue into place, allowing new systems to come about.

Using PKI, confirmed online delivery, control numbers, codes, and guide, commerce is now customary, and the process of online bonding is equally now possible and secure. ~~Using the PKI, the process is now secure, environment friendly.~~ With secure sites and communication process procedures, acknowledgements, accounting, accountability, ease, speed, it is easier to process, correct procedures can take place of conventional get-around currently in place (being done), streamlining accountability, issuance, acceptability. New limits of control, confirmation, accounting, and delivery. (This is the purpose)

#### Delivery, Security, Standards:

##### Delivery

- Final Acceptance/Delivery acknowledgment
- Confirmation
- Guaranteed delivery
- Secured connection
- Return code, verification screen

*pic 1*

- Accounting
- Real Time
- Approval
- Accountability
- Speed of bond to release faster and predictable.
- Improving Communication be
- Notification of receipt of ref number, WEBPAGE
- Encrypted XML assembly.
- PKI with file, etc, return code

##### Security

- Security - Secured Environment
- Tracking - Verification full (Return of internal code), Affirmation
- Integrity Guarantee
- Multi-layered signature
- Efficiency throughout approval/creation process
- Requires LA Sign.
- Can include approval of LA

##### Standard / Laws

- Authentic paper, unaltered, original document, no faxes or copies
- Unifying Process - Uniformity
- Standard e-commerce document, eliminating paperwork
- LAWS

## 2. Advantages

The *eSuretyBailBond* offers substantial advantages to the current surety bail bond, specifically in the areas of its security, contents, creation, delivery, reception and archival history. These advantages are indicated below:

### 2.1 Security

The *eSuretyBailBond*'s foremost attention is placed on making the process secure. Security is created by adherence to local, state, and/or federal laws. Further, security is increased with digital signatures, efficiency, acknowledgements, and proper data handling. Finally, the *eSuretyBailBond* incorporates proven technology for data verification, including third party verification and authorization.

Multiple points of involvement are part of the *eSuretyBailBond*'s process, those of laws, acknowledgements, verifications, and data handling. The result creates a perfect solution in all respects, from the bonding company's handling of data to the Commerce's handling.

#### *eSuretyBailBond*'s – Security Advantages

- Properly notarized legal binding document creation and issuance.
- Invincible, ill-fraudulent and undisputable authentication of issuing parties.
- Digital signatures in several forms with notarization and/or third party conformations.
- Incorporated data verification via multiple issuing party personnel.
- 'Real-time' issuing party's creation and approval without pre-assignment.
- Undisclosed viewing and handling for only recipient parties.
- Content integrity and assuredness with prevention of future alterations. (Tamper Proof)
- Independent private proprietary re-analysis and confirmation. (Vendor Verify)
- Content verification via 'open source' 3<sup>rd</sup> party checksum utility.
- Relieves the possibility of loss, change or other alteration.
- Original only and no phantom copies, ex via Fax.
- Individual world-wide unique number controlled processing.
- Specific receiving allowance of particular party only.
- Controlled proper pre-allocation supporting all actions without pre-sign/ pre-notarization.
- Encrypted internal data formatting prevents reproduction.
- Data reduction and purification with representation.

### 2.2 Contents

The *eSuretyBailBond*'s content format is an all inclusive, complete data record in its simplest form. It supplies a solution for both 'XML text' data entry and 'Graphic image' viewing or printing. The CRC (cycle redundancy check) validation in several layers confirms validity of all phases of data handling.

The data supplied is complete and all the required information needed for processing of all parts of the *eSuretyBailBond*.

#### *eSuretyBailBond*'s – Formatting Advantages

- Simple creation, delivery, history review and accountability.
- Includes graphic presentable security including full color additions.
- Guarantees exact original document reproduction.
- Includes graphical representation of document data, identification or transaction history.
- Documents are properly notarized.

## 2.3 Creation

The *eSuretyBailBond*'s creation process procedures are properly in place and in control. The creation creates a time reduction for data collection and process implementation.

Parties are securely in control of their involvement in the creation of the *eSuretyBailBond*. Further, creation is by approved personnel only. Interaction of many involved parties combine and enhance areas of trust, thoroughness, and procedure following, supporting proper creation.

Easy, secure, absolute control of **extended** creation processes, using automation to move data where needed. Errors in creation are reduced or eliminated. Fraudulent actions and unavoidable errors are removed. Validation, of all those involved, completes security.

### *eSuretyBailBond*'s – Creation Advantages

- Correctly followed procedure and approval processes.
- Reduction in time and cost for distribution, verification, administration and enforcement.
- Improved collaboration among bonding and surety companies and bond recipients.
- Unmistakable validity and absolute control of issuance.
- Pre-allocated documents properly controlled in real time.
- Allocation management of surety extensions and/or limits.
- Simplified entry point for vendor addition possibilities.
- Complete 'Non- Repudiation' of issuing parties.
- Ensures valid legal surety signatures anytime anywhere without affect or compromise.
- Controls bond issuance according to involvement allowed or surety power limits.
- Generation of only proper necessary paperwork.
- Immediate receiving party dedication via request.
- Reduces job errors due to structured 'development' process.
- Removes fraudulent surety signatures while ensuring valid signatures at anytime.
- Removes fraudulent agent interaction.

## 2.4 Delivery

Data of the *eSuretyBailBond* is collected and delivered in moments and not minutes, resulting in a substantial decrease in delivery time. Additionally, travel time is virtually removed, having the remaining time scheduled and efficiently planned. The net results are substantial, with 'real-time' authorizations and approvals.

Information in the *eSuretyBailBond* is proper, and presented in the simplest and most concise format available.

### *eSuretyBailBond*'s – Delivery Advantages

- Consistent reliable delivery and acceptance for recipient parties.
- Substantially faster deployment of bail proceedings.
- Reduction or elimination of physical travel increases overall safety for all.
- Easy additional forms accommodate defendant and bonding company interaction.
- Outside vendor processing and delivery to the final receiving party equalizes support for all parties.
- Secured site data exchange further guarantees data arrival.
- Simplest document delivery system.

## 2.5 Reception

The **eSuretyBailBond** is a simple Internet document, requiring a simple Internet document print. Tools available to verify the electronic image of the document, are readily available and free of charge.

Simple email correspondence will deliver the **eSuretyBailBond**. With web support, common everyday Internet browsers, and proper navigating locations can obtain and verify data dynamically.

The **eSuretyBailBond** is a complete file, offering both 'XML text' and a 'graphic image'. This single graphic file is displayable in common browser software, and is a simple file for a CRC check to confirm data file verification or to print for visual confirmation.

### **eSuretyBailBond's** – Reception Advantages

- Acknowledgement of delivery.
- Eliminates or reduces congestion at recipient location.
- Presents bond in both electronic and paper forms without conversion or interpretation.
- Allows text only data presentation with simple view of bond file.
- Presents immediate easy graphical viewing with standard Internet exploring software.
- Allows redistribution/exact copy forwarding using standard electronic data delivery.
- Allows immediate batch processing of internal data.

## 2.6 History

Processing verified, including record of original document, and can not be altered. Data is available for review at anytime and is in a simple format. Extra confirmations are done simply, over the Internet. The **eSuretyBailBond** contains its own internal history available in several simple formats.

Additional information can be retrieved for confirmation. Other features, known exclusively to the vendor of the **eSuretyBailBond**, are in place that can be presented at a later time for Court proceedings or Correctional Facility verifications. These data elements are not accessible and are not reproducible, and are privately held. At proper times, these items are released to further show data correctness.

### **eSuretyBailBond's** – Archival History Advantages

- Meticulous binding transactional history of creation and delivery.
- Recipient parties' plentiful and easily accessible transactional history information.
- Creates worldwide unique id information allowing reference tracking and referral.
- Allows future dynamic processing, history review, exoneration and/or forfeiture.
- Allows immediate optimized, efficient and direct data storage.
- Supplies internal XML formatted data record for easy data incorporation.
- Further vendor data elements are available for advanced verifications.

## 7.2 Security

Digital signatures are used in two different formats in the *eSuretyBailBond*'s generation. The first format is the digital signature issued by authorized Certificate Authorities, licensed by the State, with statutes imposed to create trust sufficient to warrant enhanced legal recognition. The other format is the digital signature acknowledgement made with an electronic transaction by a user having an ID, password and other information as part of the transaction. Proper management of these signatures allow the generation of the *eSuretyBailBond* to be completely safe and secure and established exactly as desired.

Established CRC checks within the creation of the *eSuretyBailBond* allow data to be created and contained, without modification possibilities. Further, when multiple data sets are incased in the overall *eSuretyBailBond* document, the document becomes validated to extent~~s~~ more than secure, offering no chance of alterations anywhere in the process.

Finally, using third party reverse 'Vendor Verification' forces all *eSuretyBailBond* documents to be as originally supplied by the vender. Only internal proprietary processes are available to the vender, which are unknown to any all other parties, thus creating guaranteed acknowledgement with a simple request of document verification. The simple process of the submission of the original document is done over a secured connection offering even more protection. A return acknowledgement is returned over the same secured connection, therefore competing the request and acknowledgment process.

### (a) Trust requirements

The *eSuretyBailBond* has many areas addressing the trust of its generation. Trust is presented and controlled concerning the people involved in data generation. Trust is delivered with the submitted document, knowing the data incorporated is correct and verified for authenticity.

The history accountability of the *eSuretyBailBond* document is easily verified as a simple single data file, as presented. Additionally, with secure electronic transactions, process conformities, and notarization approvals, the *eSuretyBailBond* becomes completely trusting and secure.

The *eSuretyBailBond* supports four key points of required trust attributes. These attributes together develop an involvement of trust, supporting complete transaction acceptance. These key points are: Authenticity, Integrity, Confidentiality, and Non-Repudiation.

#### (i) Authenticity

The wide support of digital signature technology implemented in the *eSuretyBailBond* ensures proper handling of data by only authorized parties. This confirms proper processing of correct methods by the proper individuals involved, thus supporting information authenticity.

**BAIL BOND AGREEMENT**

Name: Kenneth Wayne Ramirez

Charges: Felony CodeNoXX PCS over 4 gm Under 200 20000

Bond Fee: \$2000.00 Amount Paid \_\_\_\_\_ Balance \_\_\_\_\_

**YOU MUST REPORT TO THIS OFFICE 30 MINUTES BEFORE GOING TO COURT**

**The undersigned agrees to the following terms and conditions:**

1. To report to this bond office each Monday either by phone or in person until my case is disposed of. Check in number is (972) 923-0191.
2. To notify this office immediately of any change of address, telephone number, and place of employment.
3. To notify this office the name, address, and phone number of my attorney, if I decide to employ one.
4. To notify this office immediately if I receive any mail from the District Attorney's office or the Court where my case is pending.
5. To personally appear on all court dates or any other settings pertaining to this case. If I do not so appear, my bond will be forfeited, and a WARRANT will be issued for my re-arrest and charges for BAIL JUMPING will be filed on me.
6. I understand that this bond is effective for a period of one year from the date of this agreement. If at the end of one year my case is not disposed of an additional fee of 10% of the bond amount will be due upon demand. Failure to pay this amount will result in your bond being revoked and a warrant for my re-arrest will be issued.
7. I understand that in the event my case is dismissed, all money owed and/or paid to AAA Bail Bond other than ESCROW is not returnable and if a balance is due, the money due must be paid immediately.

**THE MONEY PAID OR OWED IS STRICTLY FOR JAIL RELEASE AND ASSURANCE OF COURT APPEARANCES.**

8. I agree and understand that the collateral held in escrow as described below, shall be retained until my case is disposed of and all bond fees have been paid. In the event this bonding company seeks to be relieved of liability of my bond because I have failed to comply with the terms of this agreement and/or my future conduct produces a risk to this bonding company, the collateral becomes the property of the bonding company.

Collateral or escrow put on deposit:

\_\_\_\_\_

I agree to pay \$ \_\_\_\_\_ (weekly, bi-weekly, monthly) beginning \_\_\_\_\_ until my balance of \$ \_\_\_\_\_ is paid in full. I understand in the event I become past due on my payments, my bond will be revoked and a WARRANT will be issued for my re-arrest.

A \$5.00 late charge will be applied to accounts that are 7 days past due. After 14 days your bond will be revoked and a WARRANT will be issued for your re-arrest.

Kenneth Wayne Ramirez

ELLIS COUNTY, TEXAS

**AFFIDAVIT TO RELEASE SURETY**

TO THE HONORABLE JUDGE OF SAID COURT:

Comes now AAA Bail Bonds, SAFETY NATIONAL CASUALTY CORP., Surety, hereinafter, Affiant, and respectfully shows the Court that he/she is the surety on the appearance bond of the defendant in the above entitled and numbered cause, wherein the said defendant has been charged with the following offense(s)

Felony CodeNoXX PCS over 4 gm Under 200 20000

and has been released on a bond of the sum of \$20000.00. Affiant would show the Court that the defendant is within the state of Texas and within the jurisdiction of this Court and Affiant desires to surrender the said defendant to the Court and to be relieved upon the appearance bond herein.

Affiant would further show that the date of said bond was 10/07/2003 and, the reason of the surrender of the defendant is because That he/she has failed to check in and has broken his/her agreement with us. Further, when I call his/her home, they say they have not seen him/her.

The following is a description of the defendant:

|                  |                       |                              |
|------------------|-----------------------|------------------------------|
| SSN: 452-37-2761 | Height: 5' 7 -170cm   | Eyes: Brown                  |
| DOB: 11/23/1960  | Weight: 150lbs - 68kg | Gender: Male                 |
| DL: TX 09351776  | Race: Hispanic        | Hair: Short, Straight, Brown |

Affiant further swears that no request for the issuance of a warrant in this case has been filed by Affiant or by Affiant's Company with any other Court including a Justice Court.

Wherefore, Affiant prays the Court to direct the Clerk of this Court to prepare a warrant of arrest directing the Sheriff of Ellis County, Texas, or any other proper officer of this State to re-arrest said defendant and that upon such re-arrest the Affiant herein be relieved of all further obligation and responsibility as surety upon said appearance bond.

RE: Posting Bail Bonds Electronically

Dear Mr. Guyman:

On May 9, 2003, you attended the Bail Bond Oversight Board Meeting to present the idea of electronically filing, posting and processing bail bonds with jails, courts and the Insurance Department. As mentioned in that meeting, the Department and the Board cannot endorse a vendor. However, the Department and the Board can state that they are not opposed to the electronic processing of bail bonds and, in fact, would see it as a helpful tool in the administrative processing and tracking of bail bonds.

We thank you for taking the time to talk to the Board about this tool.

Sincerely,

Insurance Department

Merwin U. Stewart  
Insurance Commissioner

Bail Bond Oversight Board

Dominic Sanone  
Chairman

NOTICE OF INVENTORS

It should be clearly understood that a Disclosure Document is not a patent application, nor will its receipt date in any way become the effective filing date of a later filed patent application.

Your Disclosure Document will be retained for two years after the date it was received by the United States Patent and Trademark Office (USPTO) and will be destroyed thereafter unless it is referred to in a related patent application filed within the two-year period.

The two-year retention period should not be considered to be a "grace period" during which the inventor can wait to file his/her patent application without possible loss of benefits.

If you are not familiar with what is considered to be "diligence in completing the invention" or "reduction to practice" under the patent law or if you have other questions about patent matters, you are advised to consult with an attorney or agent registered to practice before the USPTO.

### NOTICE OF INVENTORS

It should be clearly understood that a Disclosure Document is not a patent application, nor will its receipt date in any way become the effective filing date of a later filed patent application. A Disclosure Document may be relied upon only as evidence of conception of an invention and a patent application should be diligently filed if patent protection is desired.

Your Disclosure Document will be retained for two years after the date it was received by the United States Patent and Trademark Office (USPTO) and will be destroyed thereafter unless it is referred to in a related patent application filed within the two-year period. The Disclosure Document may be referred to by way of a letter of transmittal in a new patent application or by a separate letter filed in a pending application. Unless it is desired to have the USPTO retain the Disclosure Document beyond the two-year period, it is not required that it be referred to in the patent application.

The two-year retention period should not be considered to be a "grace period" during which the inventor can wait to file his/her patent application without possible loss of benefits. It must be recognized that in establishing priority of invention an affidavit or testimony referring to a Disclosure Document must usually also establish diligence in completing the invention or in filing the patent application since the filing of the Disclosure Document.

## Overview of State Justice Information Sharing Governance Structures

### Executive Summary

A decision-making body or governance structure is fundamental to the proper implementation of a statewide justice information sharing (JIS) program. These governing bodies allow states to manage the task of working across multiple agencies and to create and implement strategic plans for JIS. Such arrangements are vital to success because they facilitate collective decision-making and formalize the decision-making process.

To provide states with an overview of the range of JIS governance structures in place across the country, the National Governors Association's Center for Best Practices requested information from all 56 states and territories during fall 2008. Thirty-two states responded to our request.

Of the states who responded:

- More than 75 percent reported having either a formal board, commission, or committee in place to oversee statewide JIS programs;
- These bodies or structures were created through a variety of means: 19 were created through legislation, four were established by a governor's executive order, and nine were established either informally or by some other mechanism; and
- The groups had from five to 45 members and typically included state and local officials as well as representatives from professional associations.

### Justice Information Sharing and the Role of the Governance Structure

Broadly defined, JIS is a process that enables the components of states' justice systems—including state and local law enforcement, courts, prosecutors, and corrections agencies—to share justice information easily and effectively. Information is shared both vertically (among different levels of government, such as state, local, tribal, and federal entities) and horizontally (across agencies and branches of government).<sup>1</sup> The types of information shared include individuals' criminal history, parole and probation status, and court case data.

JIS governance structures have several roles:

**Cover Letter – Applicant’s Petitions for ‘Refund’ & ‘Correction of Inventorship’**

August 20, 2015

Mail Stop Petitions  
Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

Ref: Intelledoc® Securable Independent Electronic Document, Ser #12/316699, filed December 15, 2008

Sir/ Madam:

Applicant presents this letter of cover and explanation for the enclosed contents comprising Applicant’s ‘Petition for Refund’ and ‘Petition for Correction of Inventorship’. The included documentation’s Title, page, exhibit and total count for a total page count of 106 (one hundred six), listed in the following table:

| Title                                    | Pages | Total Pages | Filename      |
|------------------------------------------|-------|-------------|---------------|
| Cover Letter (this document)             | 3     | 3           | CLf0819c.doc  |
| Petition for Refund                      | 1+1   | 2           | RFf0819b.doc  |
| Petition for Correction of Inventorship  | 17+28 | 45          | CI f0819d.doc |
| Supplemental Declaration of Inyentorship | 8+48  | 56          | OIf0819b.doc  |

Applicant requests refund applied to payment of fees for the petition filing of Applicant’s ‘Petition For Correction of Inventorship’, having any remaining amount refunded to Applicant in the form of treasury check.

Applicant’s ‘Petition For Refund’ includes the following exhibit attached to and included herein:

| Exhibit | Description                    | Pages |
|---------|--------------------------------|-------|
| VG      | Copy of previous fee submitted | 1     |

Applicant's 'Petition For Correction of Inventorship' includes the following exhibits attached to and included herein:

**Petition For Refund of Fees Under 37 C.F.R. §1.26**

August 20, 2015

Mail Stop Petitions  
Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

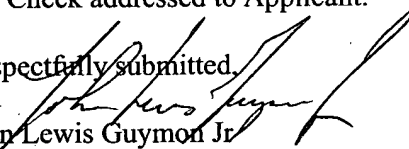

Ref: Intelledoc® Securable Independent Electronic Document, Ser #12/316699, filed December 15, 2008

Sir/ Madam:

Applicant respectfully petitions the Commissioner to refund the fees paid April 2014 (\$335) for Applicant's 'Request for Continue Examination' and 'Petition To Revive' and apply some of the refund to the required fees (\$185) for filing Applicant's 'Correction Of Inventorship' and any late fees, if applicable, therefore leaving the amounts: Total paid \$335 (Chk#1587) – Filing Fee (\$185) – Late Fee (if any) = Refund (\$150). [See Applicant's Exhibit 'VG' – 'Copy of previous fee submitted' and Exhibit 'FE' – 'Fee worksheet, §1.17(i & d)' attached to and included herein.]

Please send refund in the form of a Treasury Check addressed to Applicant.

Respectfully submitted,

John Lewis Guymon Jr  
Applicant, Pro Se

In re Application of :  
Guymon et al. :  
Application No. 12/316,699 : ON PETITION  
Filed: 12/15/2008 :  
For: SECURABLE INDEPENDENT :  
ELECTRONIC DOCUMENT :

This is a decision on the paper, filed on April 7, 2014, styled as a petition under 37 CFR 1.137(a),<sup>1</sup> which, in the absence of the required petition fee, is being treated as a petition under 37 CFR 1.181 to withdraw the holding of abandonment.<sup>2</sup>

The petition is **dismissed** for the reasons stated below.

Any request for reconsideration of this decision must be submitted within **TWO (2) MONTHS** from the mail date of this decision. **This time period is not extendable.**<sup>3</sup>

The application became abandoned on October 3, 2013, for failure to timely and properly respond to the final Office action mailed on April 2, 2013, which set a three (3) month shortened statutory period for reply. On October 2, 2013, an amendment after final rejection and a three (3) month extension of time in accordance with 37 CFR 1.136(a) were obtained. On October 18, 2013, however, an Advisory Action Before the Filing of an Appeal Brief was mailed, stating that the reply filed on October 2, 2013, fails to place the application in condition for allowance. Notice of Abandonment was mailed on February 7, 2014.

<sup>1</sup> Effective December 18, 2013, petitions to revive an abandoned application on the basis of unintentional delay are under 37 CFR 1.137(a). See *Changes To Implement the Patent Law Treaty*; Final Rule, 78 Fed. Reg. 62368, 62382 (October 21, 2013).

<sup>2</sup> In the absence of the petition fee, which is required by law, the PTO can only treat the instant petition as a (feeless 1.181) petition to withdraw the holding of abandonment. See *Krahn v. Comm'r*, 15 USPQ2d 1823, 1825 (E.D. Va. 1990).

<sup>3</sup> 37 CFR 1.181(f).

The petition is not properly signed. 37 CFR 1.33(b), as applicable to applications filed prior to September 16, 2012, requires that all papers be signed by a patent practitioner or all of the applicants for patent. 37 CFR 1.41(b) defines the applicants as all of the inventors. The declaration filed on December 15, 2008 listed John Lewis Guymon, Jr., and Douglas Scott Litsey as joint inventors. The petition, however, is signed only by inventor Guymon. Any renewed petition must be signed by both inventors or a registered patent practitioner in accordance with 37 CFR 1.33(b).

It is also noted that the reply filed with the petition is not signed. Any renewed petition must be accompanied by a properly-signed reply, signed by both inventors or their registered patent practitioner.

The petition is not accompanied by payment of the fee in the proper amount. In this regard, petitioner submitted \$35 with the present petition. Effective January 1, 2014, the fee for a petition under the unintentional provisions of 37 CFR 1.137(a) is \$850 for a small or micro entity. The fee for a petition under the unavoidable provisions of former 37 CFR 1.137(a) was \$160 prior to January 1, 2014. 37 CFR 1.22(a) states, in pertinent part, that patent fees and charges payable to the United States Patent and Trademark Office are required to be paid in advance; that is, at the time of requesting any action by the Office for which a fee or charge is payable.

As stated above, in the absence of the petition fee, which is required by law, the PTO can only treat the instant petition as a (feeless 1.181) petition to withdraw the holding of abandonment.<sup>4</sup> Petitioner, however, has not provided a showing sufficient to warrant withdrawal of the holding of abandonment. As such, the application became abandoned as a matter of law for failure to properly respond to the final Office action mailed on April 2, 2013.

Petitioner will note "[t]he Office is also revising the rules of practice pertaining to the revival of abandoned applications (37 CFR 1.137) and acceptance of delayed maintenance fee payments (37 CFR 1.378) to provide for the revival of abandoned applications and acceptance of delayed maintenance fee payments solely on the

---

<sup>4</sup> See Krahn v. Comm'r, 15 USPQ2d 1823, 1825 (E.D. Va. 1990).

basis of 'unintentional' delay. The PLTIA eliminates the provisions of the patent statutes relating to revival of abandoned applications or acceptance of delayed maintenance fee payments on the basis of a showing of 'unavoidable' delay." The effective date of this change is December 18, 2013. *Changes To Implement the Patent Law Treaty*, Final Rule 78 FR 62368 (Oct. 21, 2013), viewable here: <http://www.gpo.gov/fdsys/pkg/FR-2013-10-21/pdf/2013-24471.pdf> Accordingly, the Office no longer revives applications or reinstates patents based on unavoidable delay.

Petitioner may wish to consider filing a petition to revive the application under the unintentional provisions of 37 C.F.R. 1.137(a), as amended, accompanied by the required fee as set forth in § 1.17(m). A copy of the form for a petition to revive the application under the unintentional provisions of 37 C.F.R. 1.137(a), as amended is enclosed with this decision for petitioner's reference.

The fee for a petition under the unintentional provisions of 37 CFR 1.137(a) is \$850 for a small or micro entity. The \$35 paid on April 7, 2014 may be applied toward the petition fee due.

| Signature         | <i>John Lewis Gygis Jr</i> | Date | 4/7/2014 |
| Name (Print/Type) | John Lewis Gygis Jr        |      |          |

This collection of information is required by 37 CFR 1.114. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Mail Stop RCE, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

*Express Mail EK267983978 US*

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

|                                                                                                          |                          |
|----------------------------------------------------------------------------------------------------------|--------------------------|
| <b>PETITION FOR REVIVAL OF AN APPLICATION FOR PATENT<br/>ABANDONED UNAVOIDABLY UNDER 37 CFR 1.137(a)</b> | Docket Number (Optional) |
|----------------------------------------------------------------------------------------------------------|--------------------------|

First Named Inventor: John Lewis Guymon Jr Art Unit: \_\_\_\_\_  
 Application Number: 12/316699 Examiner: Kaveh Abrishamkar  
 Filed: December 15, 2008

Title: Securable Independent Electronic Document

Attention: Office of Petitions  
**Mail Stop Petition**  
 Commissioner for Patents  
 P.O. Box 1450  
 Alexandria, VA 22313-1450

NOTE: If information or assistance is needed in completing this form, please contact  
 Petitions Information at (571) 272-3282.

The above-identified application became abandoned for failure to file a timely and proper reply to a notice or action by the United States Patent and Trademark Office. The date of abandonment is the day after the expiration date of the period set for reply in the Office notice or action plus any extensions of time actually obtained.

**APPLICANT HEREBY PETITIONS FOR REVIVAL OF THIS APPLICATION.**

NOTE: A grantable petition requires the following items:

- (1) Petition fee.
- (2) Reply and/or issue fee.
- (3) Terminal disclaimer with disclaimer fee -- required for all utility and plant applications filed before June 8, 1995, and for all design applications; and
- (4) Adequate showing of the cause of unavoidable delay.

1. Petition fee

- Small entity -- fee \$ \_\_\_\_\_ (37 CFR 1.17(l)). Applicant claims small entity status.  
 See 37 CFR 1.27.
- Other than small entity -- fee \$ 35.00 (37 CFR 1.17(l)).

2. Reply and/or fee

A The reply and/or fee to the above-noted Office action in the form of \_\_\_\_\_ (identify the type of reply):

- has been filed previously on \_\_\_\_\_
- is enclosed herewith.

B The issue fee of \$ \_\_\_\_\_

- has been filed previously on \_\_\_\_\_
- is enclosed herewith.

04/09/2014 CCHAU1 00000013 12316699 35.00 CP  
 02 FC:1999

This collection of information is required by 37 CFR 1.137(a). The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 8 hours to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Mail Stop Petition, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.  
 If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

**PETITION FOR REVIVAL OF AN APPLICATION FOR PATENT ABANDONED  
UNAVOIDABLY UNDER 37 CFR 1.137(a)**

3. Terminal disclaimer with disclaimer fee

- Since this utility/plant application was filed on or after June 8, 1995, no terminal disclaimer is required.
- A terminal disclaimer (and disclaimer fee (37 CFR 1.20(d)) of \$ \_\_\_\_\_ for a small entity or \$ \_\_\_\_\_ for other than a small entity) disclaiming the required period of time is enclosed herewith (see PTO/SB/63).

4. An adequate showing of the cause of the delay, and that the entire delay in filing the required reply from the due date for the reply until the filing of a grantable petition under 37 CFR 1.137(a) was unavoidable, is enclosed.

**WARNING:**

Petitioner/applicant is cautioned to avoid submitting personal information in documents filed in a patent application that may contribute to identity theft. Personal information such as social security numbers, bank account numbers, or credit card numbers (other than a check or credit card authorization form PTO-2038 submitted for payment purposes) is never required by the USPTO to support a petition or an application. If this type of personal information is included in documents submitted to the USPTO, petitioners/applicants should consider redacting such personal information from the documents before submitting them to the USPTO. Petitioner/applicant is advised that the record of a patent application is available to the public after publication of the application (unless a non-publication request in compliance with 37 CFR 1.213(a) is made in the application) or issuance of a patent. Furthermore, the record from an abandoned application may also be available to the public if the application is referenced in a published application or an issued patent (see 37 CFR 1.14). Checks and credit card authorization forms PTO-2038 submitted for payment purposes are not retained in the application file and therefore are not publicly available.

(In the space provided below, please explain in detail the reasons for the delay in filing a proper reply.)

Both Applicant and Examiner has recently become familiar with the understanding and needs of the application's claims, having continued prosecution of application needed.

Applicant has submitted replies and required fees on time, and after repeated requests for assistance (§707.07(j)) files the enclosed claims.

Applicant, having life's due events, submits this petition within the two month revival time period.

*(Please attach additional sheets if additional space is needed.)*

Application Number: 12/316,699  
Application Filed: December 15, 2008  
Applicant: John Lewis Guymon Jr  
Application Title: Securable Independent Electronic Document  
Examiner/GAU: Kaveh Abrishamkar

**Claims, 1-7 as amended/added re Request for Continued Examination of April 7, 2014**

1. An electronic document for secured information exchange supporting independence of specific platform and of nonessential party, tangibly embodied in a computer readable storage medium, the securable independent electronic document comprising:

a normative standard graphical image based container adapted for sectional components, the graphic image sectional component container comprising:

a graphical image sectional component, wherein said image component adapted for storing graphical image data of said graphic image container type,

2ITwherein said component may include encrypted content wherein said encrypted content can be decrypted;

3Inwherein with a set of machine readable instructions in a computer system, said component can be processed in an automated fashion by said computer system, and

4INwherein if visually perceived by a human user, said component can be interacted upon and processed in a manual fashion by said user; and

a character text sectional component adapted for storing normative standard character text based formatted data,

wherein 1IN with a set of machine readable instructions in a computer system, said component can be processed in an automated fashion by said computer system

wherein 2IN if visually perceived by a human user, said component can be interacted upon and processed in a manual fashion by said user;

and, if user specified, additional sectional components wherein said additional components adapted for the storage of any of the following data types:

character text data, said character text comprising scripting text, rich text, markup language text, or other character text, wherein said char text can include one or more of the following:

a character text Uniform Resource Locator (URL),

encoded data, wherein said encoded data can be of any type or value including encrypted or embedded data of any type including that of the inscribed herein securable independent electronic document type,

graphic image(s) data,

raw binary data,

intrinsic security feature data,

container based binary encoded digital signature data,

any other user specified data;

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 2 of 6

wherein said sectional components include intrinsic security feature data wherein coupling of said sectional component(s) security feature data generates additional intrinsic security feature data wherein said intrinsic data or said additional intrinsic data can be stored in any one of said sectional component(s),

wherein 5IN automated system interfacing as binary file formatted type data in a direct, non-altered, single byte precision original 'incrementally-filed' data handling and storage method, whereby having said char text sec component encapsulated in said binary document container allows said character text to sustain its original sequential filed data form, and

wherein 1ID independent creation and processing of said container from said sectional components' creation and processing, and

wherein 3IT integrity enhanced non-associated creation and processing intervention from said sectional components' creation and processing, and

wherein 4IT integrity enhanced incorporated security feature information coupling of said sectional components' security check information with other said sectional components' security check information, and

wherein said normative standard graphic image container and said normative standard character text sectional components further allows the electronic document

5IT integrity enhanced intervention and association control of processing and

storage from non-desired additional parties,

2ID independent interaction of processing and storage from non-desired additional parties,

3ID independent validation of processing and storage from non-desired additional parties, and

4ID independent processing and storage of said machine readable instruction's computing platform;

2. The electronic document of claim 1, wherein said normative standard character text based sectional component can include digital signatures of one or more of the following types:

- (i) signature;
- (ii) co-signature;
- (iii) counter-signature.

3. The electronic document of claim 2 wherein said document container further comprises additional user specified binary encoded digital signature sectional components, wherein said binary encoded container based digital signature sectional component(s) include signatures of one or more of the following types:

- (i) signature;
- (ii) co-signature;

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 3 of 6

(iii) counter-signature.

4. The electronic document of claim 3, wherein said sectional components include at least one cyclic redundancy check (CRC) value.

5. A computer-implemented method for creating an electronic document for secured information exchange supporting independence of specific platform and of nonessential party, comprising:

providing memory for storage of a normative standard graphic image data file container;  
wherein said graphical image container is of a normative standard type;

instantiating said container's storage memory;

providing memory for storage of at least a plural of said container's sectional components;  
wherein said plural sectional components' include at least  
one sectional component adaptable for graphic image data,  
wherein said graphic image sectional component is of the same type of said  
container;  
one sectional component adaptable for normative standard character text based digital  
signatures;

providing data input means in which said inputted data's contents and designated sectional  
component storage memory of said inputted data can be obtained and said data's a human  
operator can supply user specified data and said data's designated sectional component storage  
memory,

wherein if said designated storage memory has not yet been instantiated,  
the method further consequently comprising:  
instantiating said data's sectional component's storage memory;

storing said inputted data in said data's designated sectional component memory,  
wherein during or upon the completion of said data storage within said designated  
sectional components, intrinsic security feature(s) data becomes available for user  
selectable or automated process' use, exchange or storage;

repeating the providing data input means, instantiating said data's sectional component's storage  
memory and storing said inputted data steps until said data has been inputted and stored as  
specified by said user;

and writing said graphic image container and said container's sectional component storage  
memories to a single graphical image electronic document container data file;

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 4 of 6

wherein said normative standard based container and sectional components allows said electronic document's creation, processing and storage to be independent of platform and nonessential party.

6. The method of claim 5, wherein said data input is of a type of at least one of the following:
- operator supplied,
  - user selected and submitted,
  - additional parties gathered,
  - user event action generated result,
  - filed data,
  - remotely obtained data,
  - automated data,
  - computer event generated data,
  - intermediate transaction processing data,
  - or any other input capable of generating said inputted data and designated component memory storage.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 5 of 6

7. A system for creating an electronic document for secured information exchange supporting independence of specific platform and of nonessential party, having said creation process further including, as desired, the creation of embedded electronic documents within said system's current said document's creation, comprising:

a processor, a memory and program instruction of said system type accessible by said system for said program instruction execution and data storage, having said execution:

instantiate a segment of said memory storing a platform independent normative standard based graphical image binary file type container;

instantiate at least one segment of said memory storing platform independent normative standard based character text file type sectional component, said character text sectional component(s) adaptable for the storage of normative standard character text based digital signatures, said character text sectional component supporting:

- i) system automated data processing;
- ii) humanly perceived interactive data processing;
- iii) XML format based digital electronic signatures;
  - 1) Signature
  - 2) Co-signature
  - 3) Counter-signature;
- iv) random binary data encoding including formed data of inscribed herein Securable Independent Electronic Document;
- v) data encryption cryptography;

instantiate at least one segment of said memory storing platform independent normative standard based graphical image file type sectional component(s), having said graphical image sectional component(s) file type the same as said container's graphical image file type, said graphical image sectional component(s) supporting the following *graphical image based* characteristics:

- i) system automated image data processing;
- ii) humanly perceived interactive image data processing;
- vi) image data encryption cryptography;

Instantiate, as desired, segment(s) of said memory storing said container based digital electronic signatures;

Instantiate, as desired, segment(s) of said memory storing additional user specified sectional component(s), said user specified sectional component(s) supporting user specified data type data characteristics;

Instantiate, as desired, segment(s) of said memory storing security feature data sectional component(s), said security feature sectional component(s) supporting said instantiated sectional component's exchanged intrinsic security feature(s) data storage;

Instantiate, as desired, segment(s) of said memory storing security feature data sectional component(s), said security feature sectional component(s) supporting said security feature exchange storage of said instantiated sectional component's intrinsically available security features;

Populating as desired said sectional components further, having additional intrinsic security feature(s) data available for said sectional component(s) security feature(s) data exchange;

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 6 of 6

Writing said container and said container's said sectional component(s) memory segments' data to said electronic document container's file data storage; and

Closing said container and said sectional components releasing said instantiated memory segments;

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it contains a valid OMB control number.

## Instruction Sheet for RCEs

(not to be submitted to the USPTO)

### NOTES:

An RCE is not a new application, and filing an RCE will not result in an application being accorded a new filing date.

#### **Filing Qualifications:**

The application must be a utility or plant application filed on or after June 8, 1995. The application cannot be a provisional application, a utility or plant application filed before June 8, 1995, a design application, or a patent under reexamination. See 37 CFR 1.114(e).

#### **Filing Requirements:**

***Prosecution in the application must be closed.*** Prosecution is closed if the application is under appeal, or the last Office action is a final action, a notice of allowance, or an action that otherwise closes prosecution in the application (e.g., an Office action under *Ex parte Quayle*). See 37 CFR 1.114(b).

***A submission and a fee are required at the time the RCE is filed.*** If reply to an Office action under 35 U.S.C. 132 is outstanding (e.g., the application is under final rejection), the submission must meet the reply requirements of 37 CFR 1.111. If there is no outstanding Office action, the submission can be an information disclosure statement, an amendment, new arguments, or new evidence. See 37 CFR 1.114(c). The submission may be a previously filed amendment (e.g., an amendment after final rejection).

### WARNINGS:

#### **Request for Suspension of Action:**

All RCE filing requirements must be met before suspension of action is granted. A request for a suspension of action under 37 CFR 1.103(c) does not satisfy the submission requirement and does not permit the filing of the required submission to be suspended.

#### **Improper RCE will NOT toll Any Time Period:**

***Before Appeal*** - If the RCE is improper (e.g., prosecution in the application is not closed or the submission or fee has not been filed) and the application is not under appeal, the time period set forth in the last Office action will continue to run and the application will be abandoned after the statutory time period has expired if a reply to the Office action is not timely filed. No additional time will be given to correct the improper RCE.

***Under Appeal*** - If the RCE is improper (e.g., the submission or the fee has not been filed) and the application is under appeal, the improper RCE is effective to withdraw the appeal. Withdrawal of the appeal results in the allowance or abandonment of the application depending on the status of the claims. If there are no allowed claims, the application is abandoned. If there is at least one allowed claim, the application will be passed to issue on the allowed claim(s). See MPEP 1215.01.

**See MPEP 706.07(h) for further information on the RCE practice.**

**Cover Letter – Applicant’s Revival and Request for Examination**

April 7, 2014

Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

Sir/ Madam:

Applicant presents this letter of cover and explanation for the enclosed contents comprising Applicant’s request for application revival and continued examination..

This correspondence has been sent Express mail, dated April 7, 2014 and includes:

|                                   |                                             |
|-----------------------------------|---------------------------------------------|
| Petition for Revival              | (PTO/SB/61, 3 pages)                        |
| Request for Continued Examination | (PTO/SB/30, 1 page)                         |
| Claims, 1-7, as amended           | (6 pages)                                   |
| Fee                               | (\$300 1.17(e)(1) & \$35 1.17(l)(1), Micro) |
| Payment, Ck#: 1587                | Total: \$335 (Micro entity (1.17(a)(3))     |

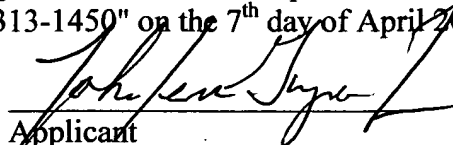

Thank you for your consideration and time with this return correspondence.

Very respectfully,

John Lewis Guymon Jr

**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--**

This application is abandoned in view of:

1.  Applicant's failure to timely file a proper reply to the Office letter mailed on 02 April 2013.
  - (a)  A reply was received on \_\_\_\_\_ (with a Certificate of Mailing or Transmission dated \_\_\_\_\_), which is after the expiration of the period for reply (including a total extension of time of \_\_\_\_\_ month(s)) which expired on \_\_\_\_\_.
  - (b)  A proposed reply was received on \_\_\_\_\_, but it does not constitute a proper reply under 37 CFR 1.113 to the final rejection. (A proper reply under 37 CFR 1.113 to a final rejection consists only of: (1) a timely filed amendment which places the application in condition for allowance; (2) a timely filed Notice of Appeal (with appeal fee); or (3) a timely filed Request for Continued Examination (RCE) in compliance with 37 CFR 1.114).
  - (c)  A reply was received on \_\_\_\_\_ but it does not constitute a proper reply, or a bona fide attempt at a proper reply, to the non-final rejection. See 37 CFR 1.85(a) and 1.111. (See explanation in box 7 below).
  - (d)  No reply has been received.
  
2.  Applicant's failure to timely pay the required issue fee and publication fee, if applicable, within the statutory period of three months from the mailing date of the Notice of Allowance (PTOL-85).
  - (a)  The issue fee and publication fee, if applicable, was received on \_\_\_\_\_ (with a Certificate of Mailing or Transmission dated \_\_\_\_\_), which is after the expiration of the statutory period for payment of the issue fee (and publication fee) set in the Notice of Allowance (PTOL-85).
  - (b)  The submitted fee of \$\_\_\_\_\_ is insufficient. A balance of \$\_\_\_\_\_ is due.  
The issue fee required by 37 CFR 1.18 is \$\_\_\_\_\_. The publication fee, if required by 37 CFR 1.18(d), is \$\_\_\_\_\_.
  - (c)  The issue fee and publication fee, if applicable, has not been received.
  
3.  Applicant's failure to timely file corrected drawings as required by, and within the three-month period set in, the Notice of Allowability (PTO-37).
  - (a)  Proposed corrected drawings were received on \_\_\_\_\_ (with a Certificate of Mailing or Transmission dated \_\_\_\_\_), which is after the expiration of the period for reply.
  - (b)  No corrected drawings have been received.
  
4.  The letter of express abandonment which is signed by the attorney or agent of record or other party authorized under 37 CFR 1.33(b). See 37 CFR 1.138(b).
  
5.  The letter of express abandonment which is signed by an attorney or agent (acting in a representative capacity under 37 CFR 1.34) upon the filing of a continuing application.
  
6.  The decision by the Board of Patent Appeals and Interference rendered on \_\_\_\_\_ and because the period for seeking court review of the decision has expired and there are no allowed claims.
  
7.  The reason(s) below:

The Final Rejection was mailed on 4/02/2013 and there has been no response to the Advisory Action filed on 10/18/2013.

**--The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

THE REPLY FILED 02 October 2013 FAILS TO PLACE THIS APPLICATION IN CONDITION FOR ALLOWANCE.

**NO NOTICE OF APPEAL FILED**

1.  The reply was filed after a final rejection. No Notice of Appeal has been filed. To avoid abandonment of this application, applicant must timely file one of the following replies: (1) an amendment, affidavit, or other evidence, which places the application in condition for allowance; (2) a Notice of Appeal (with appeal fee) in compliance with 37 CFR 41.31; or (3) a Request for Continued Examination (RCE) in compliance with 37 CFR 1.114 if this is a utility or plant application. Note that RCEs are not permitted in design applications. The reply must be filed within one of the following time periods:

- a)  The period for reply expires 3 months from the mailing date of the final rejection.
- b)  The period for reply expires on: (1) the mailing date of this Advisory Action; or (2) the date set forth in the final rejection, whichever is later. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of the final rejection.
- c)  A prior Advisory Action was mailed more than 3 months after the mailing date of the final rejection in response to a first after-final reply filed within 2 months of the mailing date of the final rejection. The current period for reply expires \_\_\_\_\_ months from the mailing date of the prior Advisory Action or SIX MONTHS from the mailing date of the final rejection, whichever is earlier.

*Examiner Note:* If box 1 is checked, check either box (a), (b) or (c). ONLY CHECK BOX (b) WHEN THIS ADVISORY ACTION IS THE FIRST RESPONSE TO APPLICANT'S FIRST AFTER-FINAL REPLY WHICH WAS FILED WITHIN TWO MONTHS OF THE FINAL REJECTION. ONLY CHECK BOX (c) IN THE LIMITED SITUATION SET FORTH UNDER BOX (c). See MPEP 706.07(f).

Extensions of time may be obtained under 37 CFR 1.136(a). The date on which the petition under 37 CFR 1.136(a) and the appropriate extension fee have been filed is the date for purposes of determining the period of extension and the corresponding amount of the fee. The appropriate extension fee under 37 CFR 1.17(a) is calculated from: (1) the expiration date of the shortened statutory period for reply originally set in the final Office action; or (2) as set forth in (b) or (c) above, if checked. Any reply received by the Office later than three months after the mailing date of the final rejection, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**NOTICE OF APPEAL**

2.  The Notice of Appeal was filed on \_\_\_\_\_. A brief in compliance with 37 CFR 41.37 must be filed within two months of the date of filing the Notice of Appeal (37 CFR 41.37(a)), or any extension thereof (37 CFR 41.37(e)), to avoid dismissal of the appeal. Since a Notice of Appeal has been filed, any reply must be filed within the time period set forth in 37 CFR 41.37(a).

**AMENDMENTS**

3.  The proposed amendments filed after a final rejection, but prior to the date of filing a brief, will not be entered because
- a)  They raise new issues that would require further consideration and/or search (see NOTE below);
  - b)  They raise the issue of new matter (see NOTE below);
  - c)  They are not deemed to place the application in better form for appeal by materially reducing or simplifying the issues for appeal; and/or
  - d)  They present additional claims without canceling a corresponding number of finally rejected claims.

NOTE: See Continuation Sheet. (See 37 CFR 1.116 and 41.33(a)).

- 4.  The amendments are not in compliance with 37 CFR 1.121. See attached Notice of Non-Compliant Amendment (PTOL-324).
- 5.  Applicant's reply has overcome the following rejection(s): \_\_\_\_\_.
- 6.  Newly proposed or amended claim(s) \_\_\_\_\_ would be allowable if submitted in a separate, timely filed amendment canceling the non-allowable claim(s).
- 7.  For purposes of appeal, the proposed amendment(s): (a)  will not be entered, or (b)  will be entered, and an explanation of how the new or amended claims would be rejected is provided below or appended.

**AFFIDAVIT OR OTHER EVIDENCE**

- 8.  A declaration(s)/affidavit(s) under **37 CFR 1.130(b)** was/were filed on \_\_\_\_\_.
- 9.  The affidavit or other evidence filed after final action, but before or on the date of filing a Notice of Appeal will not be entered because applicant failed to provide a showing of good and sufficient reasons why the affidavit or other evidence is necessary and was not earlier presented. See 37 CFR 1.116(e).
- 10.  The affidavit or other evidence filed after the date of filing the Notice of Appeal, but prior to the date of filing a brief, will not be entered because the affidavit or other evidence failed to overcome all rejections under appeal and/or appellant fails to provide a showing of good and sufficient reasons why it is necessary and was not earlier presented. See 37 CFR 41.33(d)(1).
- 11.  The affidavit or other evidence is entered. An explanation of the status of the claims after entry is below or attached.

**REQUEST FOR RECONSIDERATION/OTHER**

- 12.  The request for reconsideration has been considered but does NOT place the application in condition for allowance because: \_\_\_\_\_.
- 13.  Note the attached Information *Disclosure Statement(s)*. (PTO/SB/08) Paper No(s). \_\_\_\_\_
- 14.  Other: \_\_\_\_\_.

**STATUS OF CLAIMS**

15. The status of the claim(s) is (or will be) as follows:

Claim(s) allowed: \_\_\_\_\_  
Claim(s) objected to: \_\_\_\_\_  
Claim(s) rejected: 1-4.  
Claim(s) withdrawn from consideration: \_\_\_\_\_

/Kaveh Abrishamkar/  
Primary Examiner, Art Unit 2494

Continuation of 3. NOTE: The Applicant added new claims 5-7 and amended claims 1-4.

**Amendments w/Reply in re to Final Office Action of April 2, 2013**

October 2<sup>nd</sup>, 2013

Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

Sir/ Madam:

In response to the Office Action dated (mailed) April 2<sup>nd</sup>, 2013, with extension of time that of three (3) months making reply date due on or before October 2<sup>nd</sup>, 2013, Applicant hereby amends the Application of Patent, 12/316699, filed December 15, 2008 and remarks as follows:

**SPECIFICATION:**

Specifications not changed.

**CLAIMS:**

Amendment and printed and incorporated as separate document.  
Applicant has included 3 additional claims (#5, #6, and #7).

**DRAWINGS:**

Drawings not changed.

**REMARKS:**

In response to the Office Action dated April 2, 2013, Application presents the following remarks:

Applicant has rewritten claims (#1 thru #4) and has included a method claim (#5 & #6), and a system claim (#7) in a most diligent manner as to define the electronic document apparatus more particularly and distinctly so as to overcome the technical objections raised in the Office Action United States Patent and Trademark Office, and define, over prior art, the ability of patent for the Securable Independent Electronic Document.

Applicant submits the updated claims for office review. Applicant is unsure if the claims, as they are submitted, are in valid form and compliance with USPTO policy. Further, applicant has, with due diligence, done his best to facilitate the correct understanding in the submitted changes of this reply.

Applicant has not understood the previous office actions until lengthy discussion with the examiner. Applicant is in need of assistance with regard to writing the claims and submits this reply and included claims for review and, if needed, requests assistance in drafting the claims or changes to the claims to bring them into compliance.

Applicant has not changed the specification or any drawings at this time. Only the claims have been updated in this amendment/reply.

In regard to the Office Action's section '**DETAILED ACTION**', paragraph 1, '*This Action ...*'

1. Applicant submitted a reply to the Office Action mailed March 6, 2012 on September 6, 2012. A further communication from the USPTO office, dated November 27, 2012, titled 'Notice of Non-Compliant Amendment' was answered by applicant on December 13, 2012. Applicant believes the latest Office Action from the USPTO, dated April 2, 2013, is the latest action and is in response to the September 6, 2012 reply by Applicant.

paragraph 2, '*Claims 1-4 are ...*'

2. Applicant makes note of the claims as they are numbered, claims 1-4.

In regard to the Office Action's section '*Response to Arguments*',  
paragraph 3, '*Applicant's arguments filed ...*'

3. Applicant acknowledges the filing date of the last reply to be September 6, 2012 and further December 13, 2012 for corrections to said filing.

In regard to the Office Action's section '*Claim Objections*',  
paragraph 4, '*The Applicant does ...*'

4. Applicant incorrectly created claims 1-4 with regard to said 'means' and has updated claims 1-4 in this reply. Applicant is not invoking 112<sup>6th</sup> paragraph, as Applicant believes, as it does not apply.

paragraph 5, '*Therefor, the...*'

- 5.

In regard to the Office Action's section '*Claim Objections*',  
paragraph 6, '*Claims 1-4 objected ...*'

6. Applicant has revised the claims accordingly.

In regard to the Office Action's section '*Claim Rejection – 35 USC § 112*',  
paragraph 7, '*The following ...*'

- 7.

paragraph 8, '*Claims 1-4 ...*'

8. Applicant has revised the claims accordingly.

paragraph 9, '*Furthermore, ...*'

9. Applicant has revised the claims accordingly.

In regard to the Office Action's section '*Conclusion*',  
paragraph 10, '*THIS ACTION ...*'

10. Applicant files this reply requesting an extension of time of (3) three months,  
extending the reply date to October 2, 2013.

paragraph 11, '*A shortened statutory ...*'

11.

paragraph 12, '*Any inquiry ...*'

12. Applicant has talked with examiner by phone. Discussion with regard to the actual invention and further to some changes that would bring the claims into compliance. Applicant has had a difficult time in confirming the correct language of the claims and has reached the filing deadline; Applicant submits the changes to the claims that hopefully corrects the language and brings the claims into compliance. (Please see main remarks section above.)

paragraph 13, '*If attempts ...*'

paragraph 14, '*Information regarding ...*'

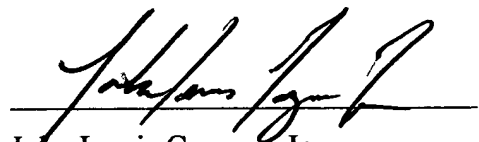

#### **CONCLUSION:**

-For all the above reasons, Applicant submits that the claims are now in proper form as he has been able to understand they should be, and that the claims all define patentability over prior art. Therefore Applicant submits that this application is now in condition for allowance which action they respectfully solicit.

**Conditional Request for Constructive Assistance**

Applicants has amended the claims of this application to the best of his knowledge and ability so that they (hopefully) are proper, definite, and define novel structure which is also unobvious. If for any reason this application is not believed to be in full condition for allowance, applicants respectfully requests constructive assistance and suggestions of the Examiner pursuant to M.P.E.P. §2173.02 and §707.07(j) in order that the undersigned can place this application in allowable condition as soon as possible and without the need for further proceedings.

Very respectfully,

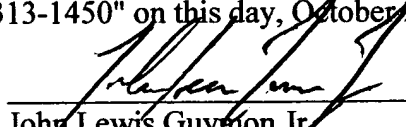

John Lewis Guymon Jr  
Applicant, Pro Se

Application Number: 12/316,699  
Application Filed: December 15, 2008  
Applicant: John Lewis Guymon Jr  
Application Title: Securable Independent Electronic Document  
Examiner/GAU: Kaveh Abrishamkar

**Claims, 1-7 as amended/added re to Final Office Action of April 2, 2013**

1. An electronic document for secured information exchange supporting independence of specific platform and of nonessential party, tangibly embodied in a computer readable storage medium, the securable independent electronic document comprising:

a normative standard graphical image based container adapted for sectional components, the graphic image sectional component container comprising:

a graphical image sectional component, wherein said image component adapted for storing graphical image data of said graphic image container type,

1IT wherein said component may include encrypted content wherein said encrypted content can be decrypted;

2IN wherein with a set of machine readable instructions in a computer system, said component can be processed in an automated fashion by said computer system, and

3IN wherein if visually perceived by a human user, said component can be interacted upon and processed in a manual fashion by said user; and

a character text sectional component adapted for storing normative standard character text based digital signature formatted data,

wherein 1IN with a set of machine readable instructions in a computer system, said component can be processed in an automated fashion by said computer system

wherein 2IN if visually perceived by a human user, said component can be interacted upon and processed in a manual fashion by said user;

and, if user specified, additional sectional components wherein said additional components adapted for the storage of any of the following data types:

character text data, said character text comprising scripting text, rich text, markup language text, or other character text, wherein said char text can include one or more of the following:

a character text Uniform Resource Locator (URL),  
encoded data, wherein said encoded data can be of any type or value including encrypted or embedded data of any type including that of the inscribed herein securable independent electronic document type,

graphic image(s) data,

raw binary data,

intrinsic security feature data,

container based binary encoded digital signature data,

any other user specified data;

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 2 of 6

wherein said sectional components include intrinsic security feature data wherein coupling of said sectional component(s) security feature data generates additional intrinsic security feature data wherein said intrinsic data or said additional intrinsic data can be stored in any one of said sectional component(s),

wherein 5IN automated system interfacing as binary file formatted type data in a direct, non-altered, single byte precision original 'incrementally-filed' data handling and storage method, whereby having said char text sec component encapsulated in said binary document container allows said character text to sustain its original sequential filed data form, and

wherein 1ID independent creation and processing of said container from said sectional components' creation and processing, and

wherein 3IT integrity enhanced non-associated creation and processing intervention from said sectional components' creation and processing, and

wherein 4IT integrity enhanced incorporated security feature information coupling of said sectional components' security check information with other said sectional components' security check information, and

wherein said normative standard graphic image container and said normative standard character text sectional components further allows the electronic document

5IT integrity enhanced intervention and association control of processing and storage from non-desired additional parties,

2ID independent interaction of processing and storage from non-desired additional parties,

3ID independent validation of processing and storage from non-desired additional parties, and

4ID independent processing and storage of said machine readable instruction's computing platform;

2. The electronic document of claim 1, wherein said normative standard character text based digital signature sectional component include signatures of one or more of the following types:

- (i) signature;
- (ii) co-signature;
- (iii) counter-signature.

3. The electronic document of claim 2, wherein said document container further comprises additional user specified binary encoded digital signature sectional components, wherein said binary encoded container based digital signature sectional component(s) include signatures of one or more of the following types:

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 3 of 6

- (i) signature;
- (ii) co-signature;
- (iii) counter-signature.

4. The electronic document of claim 3, wherein said sectional components include at least one cyclic redundancy check (CRC) value.

5. A computer-implemented method for creating an electronic document for secured information exchange supporting independence of specific platform and of nonessential party, comprising:

providing memory for storage of a normative standard graphic image data file container;  
wherein said graphical image container is of a normative standard type;

instantiating said container's storage memory;

providing memory for storage of at least a plural of said container's sectional components;  
wherein said plural sectional components' include at least  
one sectional component adaptable for graphic image data,  
wherein said graphic image sectional component is of the same type of said  
container;  
one sectional component adaptable for normative standard character text based digital  
signatures;

providing data input means in which said inputted data's contents and designated sectional  
component storage memory of said inputted data can be obtained and said data's a human  
operator can supply user specified data and said data's designated sectional component storage  
memory,

wherein if said designated storage memory has not yet been instantiated,  
the method further consequently comprising:  
instantiating said data's sectional component's storage memory;

storing said inputted data in said data's designated sectional component memory,  
wherein during or upon the completion of said data storage within said designated  
sectional components, intrinsic security feature(s) data becomes available for user  
selectable or automated process' use, exchange or storage;

repeating the providing data input means, instantiating said data's sectional component's storage  
memory and storing said inputted data steps until said data has been inputted and stored as  
specified by said user;

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 4 of 6

and writing said graphic image container and said container's sectional component storage memories to a single graphical image electronic document container data file;

wherein said normative standard based container and sectional components allows said electronic document's creation, processing and storage to be independent of platform and nonessential party.

6. The method of claim 5, wherein said data input is of a type of at least one of the following:
  - operator supplied,
  - user selected and submitted,
  - additional parties gathered,
  - user event action generated result,
  - filed data,
  - remotely obtained data,
  - automated data,
  - computer event generated data,
  - intermediate transaction processing data,
  - or any other input capable of generating said inputted data and designated component memory storage.

Patent Application of John Lewis Guymon Jr for  
“Securable Independent Electronic Document”  
Page 5 of 6

7. A system for creating an electronic document for secured information exchange supporting independence of specific platform and of nonessential party, having said creation process further including, as desired, the creation of embedded electronic documents within said system’s current said document’s creation, comprising:

a processor, a memory and program instruction of said system type accessible by said system for said program instruction execution and data storage, having said execution:

instantiate a segment of said memory storing a platform independent normative standard based graphical image binary file type container;

instantiate at least one segment of said memory storing platform independent normative standard based character text file type sectional component, said character text sectional component(s) adaptable for the storage of normative standard character text based digital signatures, said character text sectional component supporting:

- i) system automated data processing;
- ii) humanly perceived interactive data processing;
- iii) XML format based digital electronic signatures;
  - 1) Signature
  - 2) Co-signature
  - 3) Counter-signature;
- iv) random binary data encoding including formed data of inscribed herein Securable Independent Electronic Document;
- v) data encryption cryptography;

instantiate at least one segment of said memory storing platform independent normative standard based graphical image file type sectional component(s), having said graphical image sectional component(s) file type the same as said container’s graphical image file type, said graphical image sectional component(s) supporting the following *graphical image based* characteristics:

- i) system automated image data processing;
- ii) humanly perceived interactive image data processing;
- vi) image data encryption cryptography;

Instantiate, as desired, segment(s) of said memory storing said container based digital electronic signatures;

Instantiate, as desired, segment(s) of said memory storing additional user specified sectional component(s), said user specified sectional component(s) supporting user specified data type data characteristics;

Instantiate, as desired, segment(s) of said memory storing security feature data sectional component(s), said security feature sectional component(s) supporting said instantiated sectional component’s exchanged intrinsic security feature(s) data storage;

Instantiate, as desired, segment(s) of said memory storing security feature data sectional component(s), said security feature sectional component(s) supporting said security feature exchange storage of said instantiated sectional component’s intrinsically available security features;

Populating as desired said sectional components further, having additional intrinsic security feature(s) data available for said sectional component(s) security feature(s) data exchange;

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 6 of 6

Writing said container and said container's said sectional component(s) memory segments' data to said  
electronic document container's file data storage; and

Closing said container and said sectional components releasing said instantiated memory segments;

October 2<sup>nd</sup>, 2013

Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

Sir/ Madam:

This applicant herewith petitions the Director of the United States Patent and Trademark Office to further extend the time for reply to the Office Action dated April 2<sup>nd</sup>, 2013 (mailed 4/2/2013) for three (3) months, extending the date for reply from the original date of July 2<sup>nd</sup>, 2013 to October 2<sup>nd</sup>, 2013.

Submitted and included herewith is a check (Ck# 1510) for three hundred fifty (\$350.00) dollars, to pay in full the micro entity fee for a three (3) month extension, as per 37 CFR 1.17(a)(3), of three hundred fifty (\$350.00) dollars.

Thank you for your further consideration and time with this second extension request.  
Very respectfully,

John Lewis Guymon Jr  
Tel: (801) 938-4833  
Msg: (801) 943-8461

**Certificate of Mailing**

I certify that this correspondence will be deposited with the United States Postal Service as Express Mail, Tx# [ ], proper postage affixed in an envelope addressed to: "Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450" on the 2<sup>nd</sup> day of October 2013.

**Applicant's Oath of Certification of Entity Status and Correction of Inventorship**

October 2<sup>nd</sup>, 2013

Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

Sir/ Madam:

Comes now, Applicant John Lewis Guymon Jr, states and swears:

I have read this form and all relevant instructions, whether on this form, or on another. I certify that all statements made on this oath in support of this Application's:

**Certification of Micro Entity Status  
and  
Correction of Inventorship**

for Application, Serial Number 12/316,699, are true and correct to the best of my knowledge and belief, and I understand that such statements are being relied upon by the USPTO, and that they are subject to verification. I have read this entire form before signing it. I am personally responsible for the accuracy of the information provided on this application, and any attachments. I also understand that the making of any willful false statement of material fact on this application including the attached sheet(s) will subject me to the provisions of the penal law relevant to the making and filing of false statements.

Therefore, Applicant further states and swears by oath that he is unable to obtain a Certification of Micro Entity Status from named inventor Douglas Scott Litsey. Further, Applicant further states and swears by oath that Applicant is in the process of the Correction of Inventorship for the removal of Douglas Scott Litsey as he has incorrectly, as Applicant truly believes, been named as a co-inventor. Further, Applicant is in the process of said Correction of Inventorship and will submit the required materials for such process immediately, without delay, pending the completed gathering of information and supporting evidence. Applicant will have the Correction of Inventorship to the USPTO no later than October 16th, 2013, giving Applicant two (2) weeks to do so if indeed allowed and accepted by the USPTO

Very respectfully,

Signature of Applicant: [Signature] Date 10/21/2013

Sworn to before me: [Signature] Salt Lake County, State of Utah

Signature of Notary Public: [Signature] Date 10/21/2013

**Certificate of Mailing**

I certify that this correspondence will be deposited with the United States Postal Service as Express Mail, Tx# \_\_\_\_\_, with proper postage affixed in an envelope addressed to: "Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450" on the 2<sup>th</sup> day of October 2013.

The applicant hereby certifies the following— **Electronic Document**

- (1) **SMALL ENTITY REQUIREMENT** - The applicant qualifies as a small entity as defined in 37 CFR 1.27.
- (2) **APPLICATION FILING LIMIT** - Neither the applicant nor the inventor nor a joint inventor has been named as the inventor or a joint inventor on more than four previously filed U.S. patent applications, excluding provisional applications and international applications under the Patent Cooperation Treaty (PCT) for which the basic national fee under 37 CFR 1.492(a) was not paid, and also excluding patent applications for which the applicant has assigned all ownership rights or is obligated to assign all ownership rights as a result of the applicant's previous employment.
- (3) **GROSS INCOME LIMIT ON APPLICANTS AND INVENTORS** - Neither the applicant nor the inventor nor a joint inventor, in the calendar year preceding the calendar year in which the applicable fee is being paid, had a gross income, as defined in section 61(a) of the Internal Revenue Code of 1986 (26 U.S.C. 61(a)), exceeding the "Maximum Qualifying Gross Income" reported on the USPTO website at [http://www.uspto.gov/patents/law/micro\\_entity.jsp](http://www.uspto.gov/patents/law/micro_entity.jsp) which is equal to three times the median household income for that preceding calendar year, as most recently reported by the Bureau of the Census.
- (4) **GROSS INCOME LIMIT ON PARTIES WITH AN "OWNERSHIP INTEREST"** - Neither the applicant nor the inventor nor a joint inventor has assigned, granted, or conveyed, nor is under an obligation by contract or law to assign, grant, or convey, a license or other ownership interest in the application concerned to an entity that, in the calendar year preceding the calendar year in which the applicable fee is being paid, had a gross income, as defined in section 61(a) of the Internal Revenue Code of 1986, exceeding the "Maximum Qualifying Gross Income" reported on the USPTO website at [http://www.uspto.gov/patents/law/micro\\_entity.jsp](http://www.uspto.gov/patents/law/micro_entity.jsp) which is equal to three times the median household income for that preceding calendar year, as most recently reported by the Bureau of the Census.

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1)  Responsive to communication(s) filed on 27 December 2012.  
 A declaration(s)/affidavit(s) under **37 CFR 1.130(b)** was/were filed on \_\_\_\_\_.
- 2a)  This action is **FINAL**.                                    2b)  This action is non-final.
- 3)  An election was made by the applicant in response to a restriction requirement set forth during the interview on \_\_\_\_\_; the restriction requirement and election have been incorporated into this action.
- 4)  Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 5)  Claim(s) 1-4 is/are pending in the application.  
     5a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 6)  Claim(s) \_\_\_\_\_ is/are allowed.
- 7)  Claim(s) 1-4 is/are rejected.
- 8)  Claim(s) 1-4 is/are objected to.
- 9)  Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

\* If any claims have been determined allowable, you may be eligible to benefit from the **Patent Prosecution Highway** program at a participating intellectual property office for the corresponding application. For more information, please see [http://www.uspto.gov/patents/init\\_events/pph/index.jsp](http://www.uspto.gov/patents/init_events/pph/index.jsp) or send an inquiry to [PPHfeedback@uspto.gov](mailto:PPHfeedback@uspto.gov).

### Application Papers

- 10)  The specification is objected to by the Examiner.
- 11)  The drawing(s) filed on \_\_\_\_\_ is/are: a)  accepted or b)  objected to by the Examiner.  
     Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
     Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

### Priority under 35 U.S.C. § 119

- 12)  Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

#### Certified copies:

- a)  All    b)  Some    \*    c)  None of the:
     1.  Certified copies of the priority documents have been received.
     2.  Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
     3.  Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.

#### Interim copies:

- a)  All    b)  Some    c)  None of the: Interim copies of the priority documents have been received.

### Attachment(s)

- 1)  Notice of References Cited (PTO-892)
- 2)  Information Disclosure Statement(s) (PTO/SB/08)  
     Paper No(s)/Mail Date \_\_\_\_\_
- 3)  Interview Summary (PTO-413)  
     Paper No(s)/Mail Date. \_\_\_\_\_
- 4)  Other: \_\_\_\_\_

## **DETAILED ACTION**

### ***Response to Amendment***

1. This action is in response to the amendment filed on December 27, 2012. Claims 1-4 were previously pending consideration. Per the received amendment, claims 1-4 have been amended but no claims have been cancelled or added.
2. Claims 1-14 are currently pending consideration.

### ***Response to Arguments***

Applicant's arguments filed on December 27, 2012 have been fully considered but they are not persuasive for the following reasons:

The Applicant does not provide any substantial arguments to the 112 2nd rejections provided for in the previous rejection. In particular, the Applicant does not indicate whether 112 6th paragraph is being invoked or not. The different means which are being claimed (interfacing, referencing, encoding, independence, etc.) have no definition in the specification nor do they have any structure defined. It is unclear as to what is actually being used as the different means. Furthermore, the wherein clauses after the different claimed means do not further limit the claims.

Therefore, the Examiner is respectfully maintaining the 112 2nd rejections as given below.

Art Unit: 2494

### ***Claim Objections***

Claims 1-4 objected to because of the following informalities: The Applicant employs the language "can be" in multiple instances. For example, in claim 1, the claims states that the container can be of normative standard format. The Examiner notes that this language can be construed as the container is capable of being of a normative standard. Further instances include, wherein the character text data can be of an encoded type, wherein the text data can be processed in an automated fashion, and wherein the graphical image data can be of an encrypted type. There are further instances which do not limit the particular limitations but just require that an element is capable of performing a certain function. The amendment has removed some instances of the "can be" language but not all of them. Appropriate correction is recommended.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-4 rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01. The omitted structural cooperative relationships include interfacing means, referencing means, encoding means, embedding means, integrity means,

Art Unit: 2494

independence means, and digital signing means. None of the aforementioned means have any structure defined in the specification.

Furthermore, Applicant is reminded that while features of an apparatus may be recited either structurally or functionally, claims directed to an apparatus must be distinguished from the prior art in terms of structure rather than function. >In re Schreiber, 128 F.3d 1473, 1477-78, 44 USPQ2d 1429,1431-32 (Fed. Cir. 1997) (The absence of a disclosure in a prior art reference relating to function did not defeat the Board's finding of anticipation of claimed apparatus because the limitations at issue were found to be inherent in the prior art reference); see also In re Swinehart, 439 F.2d 210, 212-13, 169 USPQ 226, 228-29 (CCPA 1971);< In re Danly, 263 F.2d 844, 847, 120 USPQ 528, 531 (CCPA 1959). "[A]pparatus claims cover what a device is, not what a device does." Hewlett-Packard Co. v. Bausch & Lomb Inc., 909 F.2d 1464, 1469, 15 USPQ2d 1525, 1528 (Fed. Cir. 1990) (emphasis in original).

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Art Unit: 2494

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to KAVEH ABRISHAMKAR whose telephone number is (571)272-3786. The examiner can normally be reached on Monday thru Friday 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jung Kim can be reached on 571-272-3804. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

**In the United States Patent and Trademark Office**

Application Number: 12/316,699  
Application Filed: December 15, 2008  
Applicant: John Lewis Guymon Jr  
Application Title: Securable Independent Electronic Document  
Examiner/GAU: Kaveh Abrishamkar

**Amendments w/Reply in re Office Action of March 6, 2012**

December 13, 2012 (Org dated September 6, 2012-No changed made except page count)

Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

Sir/ Madam:

In response to the Office Action dated (mailed) March 6, 2012, with extension of time that of three (3) months making reply date due on or before September 6<sup>th</sup>, 2012, Applicant hereby amends the Application of Patent, 12/316699, filed December 15, 2008 and remarks as follows:

**SPECIFICATION:**

By the above amendment, Applicant has amended the specification to emphasis the apparatus and its functionality and structure in support of the claims.

Amendment and printed and incorporated as separate document.

**CLAIMS:**

Amendment and printed and incorporated as separate document.

**DRAWINGS:**

Drawings not changed.

**REMARKS:**

In response to the Office Action dated March 6, 2012, Application presents the following remarks:

Applicant has rewritten the claims to define the electronic document apparatus more particularly and distinctly so as to overcome the technical objections raised in the Office Action United States Patent and Trademark Office, and define, over prior art, the ability for Patent of the Securable Independent Electronic Document apparatus.

In regard to the Office Action's section '*DETAILED ACTION*', paragraph 1, '*This Action ...*'

1. Applicant

paragraph 2, '*Claims 1-4 are ...*'

2. Applicant

In regard to the Office Action's section '*Information Disclosure Statement*', paragraph 3, '*Initialed and ...*'

3. Applicant ack 5 In dis statements filed, id filed 2008 thru 2012 Applicant includes with this first office action an amended In Dis SB07 to include further found and/or referenced patents or applications of patents.

In regard to the Office Action's section '*Claim Objections*' ,

paragraph 4, 'Claims 1- ...'

4. Applicant has cleaned up several texts as suggested by examiner.

paragraph 5, 'Claim 1 is ...'

5. Applicant fixed 'd' on included word.

In regard to the Office Action's section '*Claim Rejection – 35 USC § 112*' ,

paragraph 6, 'The following ...'

6. Applicant revised claims to better point out and distinctively claim the Securable Independent Electronic Document apparatus that is taught within Applicant's Application for Patent..

The claims, having the first an independent claim for an digital information processing apparatus, and distinctively points out said apparatus, its components, and its related means, said means operating independently and during different time periods during the apparatus's creation, use and distribution.

The claims, describing the Securable Independent Electronic Document apparatus, in accordance with MPEP S 2114, define the apparatus with its structure and included means; further, the apparatus, with the support and diligent search, and, as Applicant believes, true and correct information found thereof, as claimed and further described and taught in the specification, has structure different than that of the references cited, that of Referenced Prior Art, either during , and is so claimed having described

Further, and the specification of the Application for Patent,

paragraph 7, 'Claims 1-4 ...'

7. Applicant included amended structural relationships to describe the apparatus

paragraph 8, 'Furthermore, ...'

8. Applicant believes MPEP 2114, stating that the prior art differs in structure and therefore allows the claims within without anticipation by either Ginter or Doyle.

In regard to the Office Action's section '*Claim Rejection – 35 USC § 102*',  
paragraph 9, 'The following ...'

9. Applicant describes the differences between Ginter and Doyles Systems and methods and that of the inscribed Securable Independent Electronic Document Apparatus.

paragraph 10, '*Claims 1- ...*'

10. Applicant compares Ginter and Doyle to Securable Independent Electronic Document apparatus.

Both G and D have systems and/or methods that use particular software API's. The document described herein uses no set API or coding instruction but rather lets the user decide how and with what mechanics to build the document.

G sysss lack versatility let alone 'self' doing caps.  
Includes options not wanted, has not some wanted.  
Software house is dependant to the workings of the ssthings.  
Ginter requyres trusted nodes that sincerely limit paths, ways operations or other 'circumvented' or otherwise 'the results ant path of the shipmwnt.

featured means, those of int, ind, dig,, and ??first allows the electronic document container described within to have structure, creation, security, independence overall functionality endless in possibilities, .

In Pt#, para 0117, Ginter describes a '*secure "virtual black box"*'; The Virtual Distributive Environment 'VDE', built using concepts of the DigiBox container, uses the DigiBox container in conjunction with the Transit Key ???Systems 'TKS??' that are stored on different computer systems, these systems dependand on the overall VDE envioronment to handle or to move or otherwise work with the 'user data'.

G – his apparatus that contains one or more microprocessors a

Our apparatus is not a system wide thing as much as a tangible apparatus, made up of components, pieces. Put together, an electronic document, one which allows any system or method of information handing, processing and/or exchange to occur and be possible. With the increased security thru means such as those of integrity, independence, electronic commerce becomes as needed, truly secure. The apparatus allows user control of this, completely. No additional person or party ('third') is present.

Similar to a physical truss, such in patent '??' where rulings supported different combinations of items used to

Ginter, Karl L. ; et al.

Systems and methods for secure transaction management and electronic rights protection

InterTrust Technologies Corp.  
May 30, 2002

Secure Process  
Including metering, auditing, budgeting  
Uses control sets

No apparatus claim, written in some of the different versions of the '9241 titled patent contains claim to a single stand alone secure container.

Only methods, program packages , or systems for supporting electronic commerce are claimed in the various Ginter patents or applications.

Encryption involved, as per Ginter though Decryption CONTROLLED

Req protected environments  
Their contracts, control sets

Requires a secure system.

Appliance claim comprises a processor, memory devices and other hardware items.

New kind of environment VDE [0011]. Composed of all electronic community members

Requires API and uses Rights Permissioning and Management Language RPML [0070] . RPML provides control over the taught invention. Requires certain subsystems for further needs. Creates a 'virtual black box' [0117]. Comprised of nodes, content creators, content providers and others for the environment.

[0134] VDE uses SPU's, software substitutes, HPE's, secure communications, systems integrated software, control information to achieve the electronic contract/rights protection environment of the present invention.

G-Their containers move thru this VDE environment. Containers are not user integratable for the most part. Control and other usage information is not inside the original document.

D-Just provide a certificate showing/documenting 'state' of document, allowing tampering detection.

Encryption is based on their choice [0136]

Important mechanisms for enforcement of agreements and protection is provided by VDE, and is not user creatable. [0138]

We The users of the apparatus build their own enforced confidence.

Rely on VDE for confidential purposes. [0139]

Uses proprietary based software. Both G and D build the software and are forever dependant upon for its operation and upkeep. [0141]

Security is their choice, and is based on a small set of things and not an 'open' array of user possible choices. [0142]

API's [0150]

Uses/Requires the Rights Operating System [0160]

We can be a simple document sent anywhere, secure or not, having our security within and delivery open to all channels.

G-Requires this trusted network. [0167]

Security is primarily dependant on concealment of VDE and related storage activities. [0169]

[0172] allows remote control of environment.

Software applications exist for environment, its modules and methods. [0195]

[0196] support user interaction through: (a) "Pop-Up" applications /

VDE user control information and services are seamlessly integrated into such software and can be directly accessed by a user integrated into the commercial software's native design.

[0199] uses secure chains for content trust. Embedding is based on contents in VDE containers or the moment of such content into other containers.

Requires VDE overhead. [0230]

Requires a secure subsystem. [0241]

[0284] Secure Processing Units

[0285] Uses database for storage of intermediate document container handling data items.

[0286] A hardware SPU (rather than a software emulation) within a VDE node is necessary if a highly trusted environment is required. S

[0300] "Rights Operating System" ("ROS") architecture provided by the Virtual Distribution Environment;

The logical 'simple' container contains many private data items not under users control.

[0311] FIG. 17

[0656] Environment required ROS, HPE, SPE's, API's.

Employing so much extra to move data from a to b.

[0893] The Secure Database Services Manager ("SDSM")  
Secure Database Manager RSI

[0916] The container manager registers information within secure database

[2349] Example--"Virtual Silicon Container"

[2350] VDE provides a "virtual silicon container" ("virtual black box") in that several overall secure hardware environment that "virtually" exists at multiple locations and multiple electronic appliances together form the virtual silicon container 3600.

Software for Both Ginter and Doyle must be installed. [2360] With VDE installed,

‘Intertrust’ supplies the VDE, based on DigiBox Transit Key Technology involving external database storage, node distribution, and an overall closed ‘virtual black box’ distributing system that prevents the users document from truly being ‘free’. (FREE ? )

Both Ginter and Doyle require additional externally networked systems or environments. Each of G and D have to code for their environments; whereas the securable independent electronic document has been designed around standards built and supported worldwide, unconditionally, having test cases proven to their extremes, and their use nevertheless as wide. Intertrust’s DRM, based on Digibox technology, and ProofSpace’s Proof Mark systems, methods of data exchange or independence capabilities are minimized because of their systems, the system’s unduly needed support structure, and each prior art’s incomplete and inadequate solution for security due to the additional parties involved, namely themselves.

Can the system be put into ours? Can ours be put through their system? Can theirs be embedded in one of theirs? Can ours be in theirs? In ours?  
Can they be in theirs? Ours?

DFS LINKAGES, INC. was formed on 2002-01-24 in Michigan by PAUL DOYLE.

With 2002/0129241 Application Doyle, et al, Assigned to Proofspace, Inc, and the cooresponding patents of interest or involve as

[http://www.proofspace.com/about\\_us/corporate\\_overview.php](http://www.proofspace.com/about_us/corporate_overview.php)

Doyles 2003 application relies on other related applications.

Doyle simply creates a hash of the primary original document and adds unique time stamping data moments and represents the compiled hash(s) as simple encoded blots of dots.

Doyle says himself that it is generally preferred to have 'less reliance on trusted third parties' – [0013]

Could it be even better if to have no parties, extra, trusted, entrusted, or not that are not part of Point 'A' and Point 'B' and the segment's scope of communicate?.

Doyle only authenticates original copies of user data. [0014] Provides a graphical indication that is in addition to the original user document.

Application for patent #2002/0129241 Doyle, et al. has, as listed inventors, Doyle, Michael D.

Doyle uses additional externally related items for user document handling.

ProofMark

<http://investing.businessweek.com/research/stocks/private/snapshot.asp?privcapId=126050>

ProofSpace, Inc. develops data authentication solutions. The company offers ProofMark that monitors the integrity of customer's electronic documents, detects unauthorized changes, and enables them to prove authenticity to regulators, auditors, clients, and counsel. It also offers ProofDoc, which allows users to designate ProofMark folders on their desktop to automatically secure various files; and ProofMail that digitally seals outgoing email communications and attachments. The company serves various sectors, such as healthcare, financial services, and electronic B2B ventures. ProofSpace, Inc. was formerly known as T-Stamps.com, Inc. ProofSpace, Inc. was founded in 1999 and is headquartered ...

[0047] ProofMark certificate or certification. Certifications are sometimes referred to in this document as certificates.

Certs are encoded in the graphical form. [0055] Certification information may be encoded in graphical form. This graphical form, or design, may be referred to as an "Indicia." The record at issue may be printed out by a computer or stored electronically and bear on it an indicia that relates to the authenticity of the document. The indicia (and record) may then be scanned and interpreted by the computer to authenticate the record.

Doyle, and Proof Mark certs are XML documents. [0063]

Certs contain a minimum of certifiable type of data elements.  
[0064]

Requires server. Server has reports, stats, ect and is necessary for Doyle to function. [0065]

Certs and Logs make up Doyle environment. [0066] Verifying the data may include confirming that the data in the certificate has not been tampered with or checking a log for record of the creation of the certificate being verified.

Uses dedicated proprietary Server and Client API's. [0067]

Server, servlets and other things necessary. [0068]

The server 200 also comprises a  
servlet engine 210, HTTP server 212,  
operating system 214 and  
database 216.

Uses http communications (necessary) in order for Doyle's system to work. Must use these channels. [0069] A customer requests a certificate using the browser 218. The customer application prepares and issues a certificate issue request. The server 200 issues a certificate in response to the request.

Uses API, XML, HTTP requests and responses. Security is presented in a generic running system. [0071]

Environments are supported by coding from Doyle. ProofSpace is needed for system. [0072]

Each of G and D have to code for their environments; whereas the securable independent electronic document has been designed around standards built and supported worldwide, unconditionally, having test cases proven to their extremes, and their use nevertheless as wide. Intertrust's DRM, based on Digibox technology, and ProofSpace's Proof Mark systems, methods of data exchange or independence capabilities are minimized because of their systems, the system's unduly needed support structure, and each prior art's incomplete and inadequate solution for security due to the additional parties involved, namely themselves.

0108] Certificates

[0109] A certificate is an electronic document

[0110] Certificates are XML (extensible Markup Language) documents

[0111] HTTP server component of a server,

[0112] Certificates can, as an option, be stored in a database on the server. When that is done, a reference URL used for retrieving the certificate can be returned instead of the full certificate.

What security lapses can be exploited in, say, 5 minutes?

[0121] In weighing these considerations, the inventors have discovered that an interval length of around 5 minutes is advantageous in some situations

Are you kidding us? Programmers who really understand those object oriented procedures could exploit the COM (Common Object Model) and its most definitely attached DCOM interface;

[0234] com.proofspace.IntervalSI

[0375] com.proofspace.StartupServlet

Software must operate or fault conditions stop processes. [0376]

[0494] Indicia

[0495] encodes certificates using any graphically interpretive symbology. For example, 2-dimensional barcode symbology or data glyphs may be used.

Only machine readable / interactive.

[0496] Other examples are possible. This will allow a superficially uniform, machine-readable graphical representation for all certifications.

[0497] As discussed above, a certificate, in an exemplary embodiment, consists of a certificate containing information which can be encoded in ASCII. An XML DTD has been defined which allows XML representations of certifications to be sent over networks using the HTTP protocol, among others. However, an XML document, with its numerous markup tags and ASCII representations of binary hashed data, may be deemed by some to be aesthetically displeasing. A graphical "logo," which may also be referred to as an "indicia" or "insignia," may be made to contain the certification's data. This provides an attractive way of storing and transporting certifications outside of computer systems.

Requires host

[0501] Proofspace software should generate an indicia for a given certificate.

Graphical representation is limited and chosen by ProofMark.

[0509] The ProofMark indicia is graphically designed so that it can be rendered as a collection of squares arranged in a Cartesian grid.

[0512] In one exemplary embodiment, in order to recover ProofMark data from a scanned bitmap, reader finds the origin (e.g. the upper left corner) of the ProofMark indicia, and determine the scale being used (if multiple insignia sizes have been elected as an option. Alternatively, the application that recovers the ProofMark information from the indicia may also simply query the user as to what size or scale indicia is being scanned).

paragraph 11, '*Regarding claim 1 ...*'

11. Applicant, and specifically

- a) *'a container... (0084, content container interoperability)'*

Differs – Ginter has containers throughout and dependant upon a distributed environment 'system'. The container in Ginter relies on this 'VDE' system . Doyle creates a graphical indicia for the users document and uses the indicia in a document supporting system. Both Ginter and Doyle do not teach an independent stand alone document container.

- b) *'a character ... (0138 content)'*

A simple character text data can be part of the apparatus, located in a .

- c) *'a first interfacing means ... (0138 content encryption)'*

Applicant specifies the first interfacing means of automation, where the said character text data component can be processed automatically using components in computer system. Applicant believes, 'content encryption', as presented by the Examiner, which is different from content data automation, is better addressed below in section 'h' – a first integrity means of encryption.

- d) *'a second interfacing means ... (0141 content can include freely ...)'*

A second interfacing means of human interaction is present with the ability for the user to freely interact and work with through various text selection and handling processing, including that of copy, cut and/or paste. Ginter includes the option for freely available and secured content control information, but limits the interaction and ability for access and human processing.

- e) *'a first referencing means ... (0900, 2241 reference to where content ...)'*

The apparatus described allows

- f) *'a first encoding means ... (0212, 0546 encoding)'*

- g) *'a first embedding means ... (0212 embed data into container)'*

- h) *'a first integrity means ... (0220 encrypt content)'*

Character text data can be encrypted according to user choice. Ginter suggests and allows encryption, specifically watermarking. Encryption can be one of many types chosen by the user. Doyle

- i) *'at least one graphical ... (1540 content can include image data)'*
- j) *'a third interfacing means ... (1545)'*
- k) *'a fourth interfacing means ... (1545)'*
- l) *'a second integrity means ... (1545)'*
- m) *'at least one overall ... (1783 public key is used for integrity verification)'*
- n) *'a fifth interfacing means ... (0084)'*
- o) *'a first independence means ... (0084)'*
- p) *'a third integrity means ... (0084)'*
- q) *'a fourth integrity means ... (0084)'*
- r) *'a fifth integrity means ... (0084)'*
- s) *'a second independence means ... (0084)'*
- t) *'a third independence means ... (0084)'*
- u) *'a fourth independence means ... (0084)'*

paragraph 11, cont, *'Claim 2 is ...'*

- v) *'a first digital signing means ... (0173, 1742 digital signature)'*

paragraph 11, cont, *'Claim 3 is ...'*

- w) *'at least one or more digital signature ... (0173, 1742)'*
- x) *'digital signing means ... (0173, 1742)'*

paragraph 11, cont, *'Claim 4 is ...'*

In regard to the Office Action's section '*Conclusion*',  
paragraph 12, '*Any ...*'

paragraph 13, '*If ...*'

**The Objection to the Specification and the Claims Rejection Under §112.**

The spec was objected

Applicants request

First,

Note

As to how, the spec clearly

Thus the present spec clearly and completely teaches how to make and use the invention in general,, and how the template images are related to ???in particular.

Accordingly applications submit that the spec does comply with §112 and therefore request withdrawal of this objection.

**The Rejection of Claim 1-4 on**

Applicants request reconsideration of this rejection, as now applicable to claim, for the following reasons:

- 1) There is nol
- 2) The proposed combination would not be physically possible or operable.
- 3) Even if H and G were to be co
- 4) These novel physical features of claim 1-4 produce new and unexpected results and hence are unobvious and patentable over these references.

**The References and Differences of the present Apparatus Thereover**

Prior to discussing the claims and the above four points, applicants will first discuss the references and the general novelty of the present invention and its unobviuosness over the references.

Accordingly applicants submit that the dependant claims are a fortiori patentable and should also be allowed.

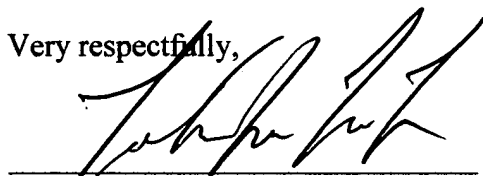

**CONCLUSION:**

For all the above reasons, applicants submit that the specification and claims are now in proper form, and that the claims all define patentably over the prior art. Therefore they submit that this application is now in condition for allowance which action they respectfully solicit.

**Conditional Request for Constructive Assistance**

Applicants have amended the specification and claims of this application so that they are proper, definite, and define novel structure which is also unobvious. If for any reason this application is not believed to be in full condition for allowance, applicants respectfully request the constructive assistance and suggestions of the Examiner pursuant to M.P.E.P. §2173.02 and §707.07(j) in order that the undersigned can place this application in allowable condition as soon as possible and without the need for further proceedings.

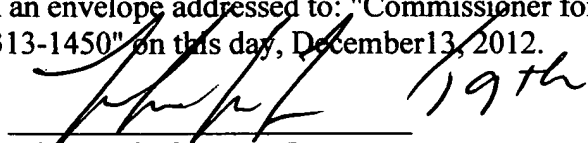

Very respectfully,

John Lewis Guymon Jr  
Applicant, Pro Se

**FEDERALLY SPONSORED RESEARCH**

[0003] Not Applicable

**BACKGROUND—FIELD**

[0004] Inscribed within generally relates to information handling and specifically to electronic documents. Various aspects of an electronic document apparatus are described and are particularly applicable to the security and manufacture of the document container, as well as a few of the many involved processes, methods of use and possible comprised systems of the apparatus. Additional aspects presented relate to the electronic document's methods of handling and use, for example in

providing secure independent information delivery in industries of securities, commerce, trade and/or exchange.

#### BACKGROUND OF THE INVENTION—PRIOR ART

[0005] With life, there is the digital world. With information, there is the digital world. Now days, they are one in the same. We are always asking, "Is it secure?" We live, having our world untouched by anyone else, desiring so much to have things as we left them, untouched.

[0006] The technology available today allows life to seemingly flow at the speed close to that of light itself. We are literally there before we finish the push of the button. We struggle to comprehend such speeds, and will continue to do so, in such a dynamic and fast paced world. Information should be handled with care. To maintain the integrity of our intent, it must be secure.

[0007] In order to facilitate the creation and editing of electronic documents containing our information world, vast amounts of variable types of technology can be used. Agreed upon formats, specifications, recommendations and other standard defined help in accomplishing a particular task with greater information exchange and security.

[0008] Information exists in many variable formats and is transported in a vast spectrum of ways. Within the digital world, a substantial format set is available for equally substantial information type accommodations. For instance, character data handling is accomplished using text-based languages supporting a functional 'mark up' approach, having data populated with tags or other identification delimiters or data descriptors. These forms are of the markup language family, such as those of SGML, XML, HTML, cXML and other text based formats among the multiples of these established containment types.. Further image and other visually handled data is often supported using graphic image based file formats, such as PNG, JPG, TIFF, GIF, BMP and others established in the market place.

[0009] The basis of the teaching is to facilitate knowledge in the area of information processing and exchange. There are electronic information document type containers developed recently with the inability to support the secure and independent exchange as presented and taught in the following.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 3

[0010] Document handling systems, databases and vault systems, as well as other transaction oriented processes, information transfers and data representations. For the purpose of this disclosure and illustration of multiple embodiments, the various possible configurations of an electronic document are focused upon for reasons of security, independence, flexibility in construction, and in support of other needs.

[0011] Tangible document content range from simple character text to full color text data, with external formatting information to image data of varying form, to audio and multimedia data, to metadata, to binary data, all of which can be included within.

[0012] All areas of industry require documents, many of which have security/requirements/needs. Specifically, insurance, mortgage, securities, as well as other financially based documents; many have highly regulated legal requirements. The required technology for their electronic handling was arguably unavailable for the most part prior to the turn of the Millennium. Considerable energy to create a "paperless world" has been expended, and these efforts are ongoing. Despite all of the world's labors, highly valued documents still often remain in paper form. Where is an electronic container that will secure these assets digitally?

[0013] Viewing a graphic image may include the perception of dots, lines, characters, scripts, meshes, shades, arrangement, proportion, scale, and color. Content is presented reflecting true life and nature. Real life and nurture tells us information is here, whether it is an artistic representation of a data element or value or an intense artistic representation of the elements in life itself. A picture has been said to be worth a thousand words. Data in image form often possess substantial information content.

[0014] Similar, character text can be perceived visually. Character text in this same form can also be processed systematically. Character data is based on memory addressing units, having an array of different character representations available for the different character text data unit values. Character text includes the letters making up the words you read here. Information in its everyday basic simplest form is here, here, written with the letters of each and every one of these words that you read.

Patent Application of John Lewis Guymon Jr for  
“Securable Independent Electronic Document”

Page 4

[0015] The usage of paper forms is a predominant method for producing documents, and these forms tend to have a fixed layout and some areas of variable content. The desire to electronically create and process the information contained within documents has existed for some time and will continue. With electronic processing means, documents can be better adapted for digital commerce, trade, and exchange of transactions. Providing a container to envelope these documents increases the electronic options available for their support.

[0016] Bonds, powers of attorney, titles, deeds, leases, judgments, motions, affidavits, and other paper documents have been in use for long periods of time. These document types, in either original paper only medium or in a digital graphic memory contain a visual image or picture of the actual information that is of a transaction. Electronic form allows information storage and handling up and beyond that of the visual image-handling interface. Within digital data memory capabilities lay the ability for raw character based data to be represented. Having the two different data representation types for the information, those that of graphical image and character text, a container is built to handle exchange and transaction. Either singly or in combination, character text and graphical image data components can be present for information conveyance. Only recently have these documents had the support in place needed to facilitate the document’s handling completely using electronic means. Now, with the ability in place to facilitate both character text and graphical image components, the harmony in its presentation, handling, independence and security relies on a few key issues, specifically what is needed and how can it be done?

[0017] Information handling has its required attention and resource requirements. Security issues mandate a majority of container development process. A system built upon a well working container that includes independency from outside system requirements extends the efficiency and control of internal resources. Such efficiency and control can be maximized, becoming a secure independent electronic document solution.

[0018] Monetary based transactions have been in existence before the printed money it represented was. Trade and commerce, along with exchange, barter, vendor or venter oriented agreements have had a need to be facilitated in some fashion, similar to the mineral exchange of gold, silver, platinum and others. Money, specifically paper money and coin, is a commonplace vehicle for resource

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 5

structured exchange and management. Monetary based items, assets, transactions and other commonplace vehicles structured on such systems all speak of the same desire and need, that being value and asset management and exchange.

[0019] Industries, such as those of the Surety, Insurance or Bail Bonding industries, have used tangible based financial supporting documents since the beginning of human based insurance back.

[0020] To represent this industry, a representation of both the 'graphical image' and 'character text' must be included for complete adapted functionality. Security is based on party involvement and need to know regulations. If independence from 'third' party is further supplied, security is only enhanced. Having your own way of packaging, distribution, processing, transacting, verifying, or authenticating document information with no internally placed outside based party is a must. Technology is available for such a system. Notarizations, or witness related verifications, have been around since times of Kings and Queens; however, for the digital equivalent, the technology has only been around since the years of the turn of the Millennium. What is needed is the independent container that supports the highest statutes backed electronic information handling possibilities defined today.

[0021] The options of markup type languages such as XML and others as the main structural component for document and sub-document handling needs has become a world wide accepted way of handling the inter-relational aspects of data files and their containment handling, grouping or other object or element structuring of relational data. The extreme ends of the data type spectrum are those of character text and graphical image. 'Graphical image' as the container for the character text becomes the solution more so than character text as the container for the graphical image.

[0022] Independent 'graphic image' containers further support handing, interface and integrity means required for enhancing security of electronic document contents. The need for digital signature signed data was necessary as well. The combination of the three increased the security measures in place. Again, security is further enhanced with the independence from other non-invited or desired parties. Further, with the ability to develop applications in house, easily, with world wide support allows a simpler manufacturing environment, reduces costs of such environments, and eases or completely releases restrictions for development, distribution, interaction, verification, authentication and achieve of the container, further developing its independence.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"

Page 6

[0023] Many ways of handling information are reliant upon commercial or other vendor or vender interaction. Further, there are restrictions in how data is processed, or, even further, the previous art present only parts of the electronic document apparatus, having other parts and systems and other commercially interlaced information transmissions and exchanges. Original documents are sometimes made from scanned sources, virtually removing the dynamic allocation and build properties available in a real time document manufacturing process. Additionally, some information or other image data embedding arts actually go further than that, and forever alter or restrict the original image content.

[0024] This has made and is making digital information transfer complex; further, only parts of the solution exist. A mirage of devices, interfaces, methods, all exist, and these pieces and sub standard methods creates more problems. The issue is of interoperation of the document contents. With the people involved, methods of transfer, degree of security, and control of all entities and their parties involved, there is a dedicated portion of document handling and security that needs attention.

[0025] Feature rich vendor supplied solutions are sometimes richer in content than desired. Features that are not always necessary for commonplace transactions are become common all over the place hurdles always necessary that are not features. Further, a solution that answers to all needs are in fact sometimes too much.

[0026] Prior art shows examples of complete systems that present a way of electronic document control. None of the references would piece apart or combine together to create the electronic document, specifically with regard to standards.

[0027] Prior art handles electronic documents and its delivery in different ways, further having mechanisms or apparatus that are different and act differently.

[0028] Different prior art references teach handling of data in an electronic document differently. Some alter data of an image; some built a system that comprises the document.

[0029] What is needed is a securable independent electronic document that solves one or more problems described herein and/or one or more problems that may come to the attention of one skilled in the art upon becoming familiar with this specification.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 7

[0030] Prior art consists of a variety of document container, their methods and their uses. The field presents several related prior art references that offer some improvements made in the field to resolve these issues. Examples include but are not limited to the references described below, which references are incorporated by reference herein:

[0031] U.S. Pat. No. 7,451,156 issued to Ornstein, et al. sets forth a METHOD AND APPARATUS FOR MAINTAINING RELATIONSHIPS BETWEEN PARTS IN A PACKAGE.

[0032] U.S. Pat. No. 7,441,185 issued to Coulson, et al. sets forth a METHOD AND SYSTEM FOR BINARY SERIALIZATION OF DOCUMENTS, teaches documents are considered main that of text XML, and this process reduces the XML's footprint as it is transferred.

[0033] U.S. Pat. No. 7,418,652 issued to Ornstein, et al. sets forth a METHOD AND APPARATUS FOR INTERLEAVING PARTS OF A DOCUMENT.

[0034] U.S. Pat. No. 7,383,502 issued to Shur, et al. sets forth PACKAGES THAT CONTAIN PRE-PAGINATED DOCUMENTS.

[0035] U.S. Pat. No. 7,383,500 issued to Shur, et al. sets forth METHODS AND SYSTEMS FOR BUILDING PACKAGES THAT CONTAIN PRE-PAGINATED DOCUMENTS.

[0036] U.S. Pat. No. 7,373,330 issued to Klebe sets forth a METHOD AND APPARATUS FOR TRACKING AND CONTROLLING E-MAIL FORWARDING OF ENCRYPTED DOCUMENTS, teaches multiple publisher type oriented apparatus to request, email, download program and data and decrypt data.

[0037] U.S. Pat. No. 7,366,982 issued to Shur, et al. sets forth PACKAGES THAT CONTAIN PRE-PAGINATED DOCUMENTS.

[0038] U.S. Pat. No. 7,359,902 issued to Ornstein, et al. sets forth a METHOD AND APPARATUS FOR MAINTAINING RELATIONSHIPS BETWEEN PARTS IN A PACKAGE, teaches a package system using XML.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 8

[0039] U.S. Pat. No. 7,356,143 issued to Morten sets forth a SYSTEM, METHOD, AND APPARATUS FOR SECURELY PROVIDING CONTENT VIEWABLE ON A SECURE DEVICE, teaches Media player doing encrypt and decrypt steps.

[0040] U.S. Pat. No. 7,343,339 issued to Harrison Jr., et al. sets forth an ELECTRONIC BOND AND GUARANTY PROCESS AND BUSINESS METHOD.

[0041] U.S. Pat. No. 7,330,974 issued to Silverbrook, et al. sets forth a METHOD AND SYSTEM FOR DELIVERY OF A SECURE DOCUMENT, teaches altering images with message data.

[0042] U.S. Pat. No. 7,330,560 issued to Donescu sets forth an INSERTION AND EXTRACTION OF A MESSAGE IN AN IMAGE.

[0043] U.S. Pat. No. 7,299,408 issued to Daconta, et al. sets forth an ELECTRONIC DOCUMENT VALIDATION.

[0044] U.S. Pat. No. 7,296,217 issued to Earnshaw, et al. sets forth an ELECTRONIC TRANSACTION DOCUMENT SYSTEM.

[0045] U.S. Pat. No. 7,295,207 issued to Yoon, et al. sets forth a METHOD FOR MANAGING ANIMATION CHUNK DATA AND ITS ATTRIBUTE INFORMATION FOR USE IN AN INTERACTIVE DISC.

[0046] U.S. Pat. No. 7,251,832 issued to Venters, III, et al. sets forth a SECURE STREAMING CONTAINER, teaches open streaming channel of media from specific exe.

[0047] U.S. Pat. No. 7,251,644 issued to Viola, et al. sets forth PROCESSING AN ELECTRONIC DOCUMENT FOR INFORMATION EXTRACTION.

[0048] U.S. Pat. No. 7,199,804 issued to Bhattacharyay, et al. sets forth INK INFORMATION IN IMAGE FILES.

[0049] U.S. Pat. No. 7,191,392 issued to Coar sets forth a SYSTEM AND METHOD FOR THE CREATION OF VIRTUAL INFORMATION PACKAGES, teaches Combination of files into a package, with access rule.

[0050] U.S. Pat. No. 7,191,186 issued to Pullen sets for a METHOD AND COMPUTER-READABLE MEDIUM FOR IMPORTING AND EXPORTING HIERARCHICALLY STRUCTURED DATA.

[0051] U.S. Pat. No. 7,181,017 issued to Nagel, et al. sets forth a SYSTEM AND METHOD FOR SECURE THREE-PARTY COMMUNICATIONS.

[0052] U.S. Pat. No. 7,172,122 issued to Alleshouse sets forth an XML SYSTEM.

[0053] U.S. Pat. No. 7,089,248 issued to King, et al. sets forth a GROUP FILE DELIVERY INCLUDING USER-DEFINED METADATA.

[0054] U.S. Pat. No. 6,954,542 issued to Miyake, et al. sets forth an IMAGE PROCESSING APPARATUS AND METHOD, teaches an application to put information into pixel image.

[0055] U.S. Pat. No. 6,908,034 issued to Alleshouse sets forth an XML SYSTEM.

[0056] U.S. Pat. No. 6,862,599 issued to King sets forth a SOFTWARE-BASED METHODOLOGY FOR THE STORAGE AND RETRIEVAL OF DIVERSE INFORMATION, teaches Pointer management for hierarchy based data.

[0057] U.S. Pat. No. 6,643,383 issued to Dugelay sets forth a METHOD FOR HIDING BINARY DATA IN A DIGITAL IMAGE.

[0058] U.S. Pat. No. 6,616,702 issued to Tonkin sets forth PREVIEWING AN ASSEMBLED DOCUMENT.

[0059] U.S. Pat. No. 6,507,858 issued to Kanerva, et al. sets forth a SYSTEM AND METHOD FOR STORING ORDERED SECTIONS HAVING DIFFERENT FILE FORMATS.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 10

[0060] U.S. Pat. No. 6,342,954 issued to Hisatomi, et al. sets forth an IMAGE INFORMATION PROCESSOR AND IMAGE INFORMATION TRANSMITTER.

[0061] U.S. Pat. No. 6,192,138 issued to Yamadaji sets forth an APPARATUS AND METHOD FOR EMBEDDING/UNEMBEDDING SUPPLEMENTAL INFORMATION, teaches Image and watermarking.

[0062] U.S. Pat. No. 6,138,119 issued to Hall, et al. sets forth TECHNIQUES FOR DEFINING, USING AND MANIPULATING RIGHTS MANAGEMENT DATA STRUCTURES, teaches techniques for defining, using and manipulating digital rights management data structures.

[0063] U.S. Pat. No. 6,055,321 issued to Numao, et al. sets forth a SYSTEM AND METHOD FOR HIDING AND EXTRACTING MESSAGE DATA IN MULTIMEDIA DATA, teaches hardware for examining media extracting message from transformed/scrambled data in media.

[0064] U.S. Pat. No. 5,894,558 issued to Falker sets forth a METHOD OF DISPATCHING DOCUMENTS BY CONVERTING THE DOCUMENTS FROM A CUSTOMER SPECIFIC DATA FORMAT TO A STANDARDIZED DATA FORMAT, AND THEN TRANSMITTING THE DOCUMENTS VIA MOST FAVORABLE WAY TO RECIPIENTS.

[0065] U.S. Pat. No. 5,778,372 issued to Cordell, et al. sets forth REMOTE RETRIEVAL AND DISPLAY MANAGEMENT OF ELECTRONIC DOCUMENT WITH INCORPORATED IMAGES.

[0066] U.S. Pat Application 20070106932, Coar, sets forth a SYSTEM AND METHOD FOR THE CREATION OF VIRTUAL INFORMATION PACKAGES, teaches a container of files with access rules.

[0067] U.S. Pat Application 20070011457, Dubinsky, et al. sets forth a METHOD FOR DISPLAYING AND PRINTING DIFFERENT SIZES OF SMART DOCS, teaches a visual display method for viewing a document, solving previous display issues.

[0068] U.S. Pat Application 20060150151, Dubinsky, sets forth a METHOD AND SYSTEM FOR EMBEDDING USER ASSISTANCE IN DOCUMENTS UTILIZING MARKUP LANGUAGES, teaches a system and method for providing user assistance directly in the document, where the document is of the XML type.

[0069] U.S. Pat Application 20060136477, Bishop, et al. sets forth a MANAGEMENT AND USE OF DATA IN A COMPUTER GENERATED DOCUMENT, teaches a multipart electronic document allowing sectional sub-document editing and control.

[0070] U.S. Pat Application 20060080599, Dubinsky, sets forth a METHOD AND SYSTEM FOR BUILDING AUDIT RULE SETS FOR ELECTRONIC AUDITING OF DOCUMENTS, teaches a system and method for creating documents, audit rule-sets and testing requirements. Included is application software for creation of rule sets and properties, having the software limit the documents full use and potential. The document is based exclusively on XML components with a reduced feature set capability.

[0071] U.S. Pat Application 20050138382, Hougaard, et al. sets forth a METHOD AND PROCESS FOR CREATING AN ELECTRONICALLY SIGNED DOCUMENT.

[0072] U.S. Pat Application 20040237040, Malkin, et al. sets forth a SYSTEM AND METHOD OF PROCESSING AN ELECTRONIC FORM USING LAYERED ASPECTS.

[0073] U.S. Pat Application 20040128513, Wu, Yen-Hsing, et al. sets forth a SECURED ELECTRONIC DOCUMENT AND METHOD OF VALIDATING THE SAME, teaches a secured electronic document and method for securing documents using printing means.

[0074] U.S. Pat Application 20030046274, Erickson, et al. sets forth a SOFTWARE MEDIA CONTAINER, teaches a secure media container and its handling apparatus for specifically limited digital rights management using a single container with external data and reference thereof.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 12

[0075] U.S. Pat Application 20020066019, Amonou, et al. sets forth INSERTION OF MESSAGES IN DIGITAL DATA, teaches a method and device to make it possible to insert messages in a subset of digital data whilst ensuring the required robustness and invisibility.

[0076] U.S. Pat Application 20020059144, Meffert, et al. sets forth a SECURED CONTENT DELIVERY SYSTEM AND METHOD, teaches implemented PKI encryption between sender and recipient.

[0077] U.S. Pat Application 20010027459, Royal, sets forth a METHOD AND APPARATUS FOR ELECTRONIC DOCUMENT EXCHANGE, teaches a method for document exchange using standard protocols that's flexible and easy to use. Shown is a specific document exchange system using specific relationships. Combination containers are used and are not dedicated document containers.

[0078] While the foregoing described prior art have provided elements of operation, they lack ability to be secure, independent of additional party involvement, having original document authentication, automation, interface and handling functionality;

[0079] Other prior art using methods such as signature mapping on graphic representations, transportation of text based content allowing alteration, outside party interface dependant, commercialized and controlled, content duplicated, specific data format type exceeded, content and cross-content support limited, altered or other missed security measured methods s required for today's digital exchange, commerce, and trade transactions for electronic information.

[0080] Environment in which the document is in is intense and requires enormous resource. The steps forward in processing the idea, the prototype and a working version that could sustain the market vitality are enormous, even though the distances traveled are small.

[0081] Thus, there remains a need in the art for a securable independent electronic document. An apparatus that is securable, easy to use, robust, alteration detectable and independent of other party's involvement, supportive of digital signatures and their witnesses, and supports complete closed party information exchange.

[0082] Prior art heretofore known suffer from a number of disadvantages, which include a number of information integrity processes.

[0083] Without a unique container, individual, simple, in-house defined ways of document processing is not allowed; it's not totally secure, for sure. Further, custom, private handling solutions cannot be used or included, nor can they be conducted, without having total control of this container. A securable independent electronic document container is defined having absolute handling means. Further, it is defined to have intentional dedication to the security within.

[0084] Security is of the utmost importance. Take a bail bond document, for example. The said document becomes a promise that good intentions are desired between all parties. It further shows the urgency and need to solve issues or problems at hand, if any. In this industry, there is a yielding to the way of the more critical needs of humanity. A simple document; a promise of resource or asset; A guarantee that information moves on, without delay. Legal processes and matters thereof are among the highest in need for common humanity based affairs. Each side depends on the document to help with issues of resource management, be-it time or money, or both. Resources close to 'home' influence and shape our lives more than the courts, fees, jails, bonds, sureties, insurances and risks. However, in the system, money has a way of saying something, and incorrect, inefficient and pretend solutions have a way of getting up and moving. The electronic document speaks its monetary and asset value having delay, inefficiency, resistance, or other influences left at the curb.

[0085] People should feel confident of their transactions. Interoperability is one main consideration. The 'binary visually graphic' container is operable among all systems and platform and computer systems. Simple cut and paste. That's all we want! It's possible. In the older DOS editors, the document can be edited, having its internal text contents simply cut and pasted into a new formed destination file, and the contents comes alive, executing, establishing, presenting, processing, transacting as needed. Any text, let alone any data, can be in there.

[0086] Cross platform creation for the reading, printing, and processing of the electronic document can occur. Further, as dates continue, as do version oriented software releases, base support will be built in already.

[0087] Developing standards or other normative based recommendations are available which describe many of the possible internal and external working components. Various utilities, tools and other applications are widely available for document creation, delivery, verification, automation, and other transaction processes. With the binary type container can be carried, such as via email or zip file or other box. Graphical applications can display visual images at the same time that text-editing applications can present character texts. The container is well supported. Tools to support are available and free.

[0088] Container could either support easy non-scripting simple graphic data decompression or character text processing interaction. With the simple graphical display being first, generic errors, such as buffer overflows or failed dictionary or image reconstructions. These generally would create internal errors and such would occur and trigger a simple closing, stoppage of processing response, which would cause little disruption. The Process of the character text could be done, generally in either area or 'interfacing' phase of the document. For instance an initial read could be done to the document, exposing its detailed content to the computer for routing and designation delivery, processing, operations and other integrated procedures or functions.

[0089] These sections can have the character data text languages that work within 7 or 8 bit formats. Remember, any data could be placed in a 6 Bit format using the Base64 MIME encoding, which, for example, could be done with international multiple character byte language formats. A use of an extensible markup language (XML), for example digital signatures and extensible hypertext markup language (XHTML), which are commonly used for creating electronic documents. Scripting code, protocol text, server page ASP, batch file process or other such text based formats are easily placed in the text sections.

[0090] Can represent and support a large variety of paper-based documents or electronic based documents.

[0091] Another feature with the electronic document is the ease of handling for document variation. Within any industry, individually dictated practices or other various conditions involved in processing an electronic document is completely supported. For example, in mortgage transactions, certain

lenders may have a common set of requirements for document validity, but might supplement these with their own particular requirements.

[0092] Impossible to Combine- The mix of the two environments, character text and graphic, is the combination of the two different environments that have evolved since the beginning of computer systems.

[0093] Rewrite The present invention can be embodied in various forms, including business processes, computer implemented methods, computer program products, computer systems and networks, user interfaces, application programming interfaces, and the like.

[0094] Prior art have differences in their presentation of the electronic document, and therefore are complete solutions that do not interact. Further, some references have technology reversed, showing combination can still be unobvious.

[0095] The World Wide Web Consortium (W3C) is the organization responsible for the XML standard, DTDs and related standards (<http://www.w3.org>). Notwithstanding the reference to DTDs to define the structure of XML documents, it should be understood that other specifications, methodologies, systems, protocols, or schemes could define the structure of markup languages.

[0096] Applications are not putting options in for a major embedded section of character text

[0097] There is no suggestion or teaching that references or presents a serried of combined ISO/IEC/W3C standards, specifically none placing digital signatures, notarizations, and self-containment inside digital graphic images.

[0098] Unobvious was the suggestion to combine the character text and graphic elements. There were prior suggestions for metadata or a comment, but the idea of internally supporting simple or rich text, markup or system command language or further other encoded random data has not come to light, let alone auto processed, digitally signed or digitally witnessed data.

## BRIEF SUMMARY OF THE INVENTION

[0099] Taught within is the development of an electronic document in response to the present state of the art, and in particular, in response to the problems and needs in the art that have not yet been fully solved. Accordingly, the embodiments presented within teach various possible solutions using an electronic document apparatus. Described herein, the apparatus shows to accompany variously different information handling requirements of exchange, commerce and trade. Offered with the electronic document apparatus is security and independence in its process, method, and manufacture, offering a system for the secure independent electronic document operation.

[0100] Providing an inert container for an electronic document having advanced security features, particularly those allowing complete system control of said container, doing so with a selected set of parties, and no more. Independence is further extended with verification abilities, allowing original vendors to verify the container and its contents.

[0101] Interrelated security with in document secures document further. Each interface could support characterization of the other, and interact to bind data of both format types.

[0102] Digital signatures, let alone XML has not been presented as something that should heavily populate a comment field, making an image container become a secure document.

[0103] The use of the electronic document using embedded enhanced XML protocols has not been discussed nor realized, and further, repeated missed signification realizations with focus diverted elsewhere shows lack of advantage realization.

[0104] The only link that best made sense was the text super imposed into the graphic format.

[0105] Any mention of items embedded are for descriptive or metadata purposes.

[0106] The main 'things' had come to frustration. It was that a mix of the two, preferably in the course of 'into one document'. Due to its advantages, the building of the electronic document would have transpired by this time.

[0107] The problem with securities assets transfer required solid positive control of container for such assets. Not until now has there been a container with enhanced security containing both automated data and visual presentation.

[0108] Standards are designed for voluntary use and do not impose any regulations. However, laws and regulations may refer to certain standards and make compliance with them compulsory. For example, the physical characteristics and format of credit cards is set out in standard number BS EN ISO/IEC 7810:1996. Adhering to this standard means that the cards can be used worldwide. [0000] Any standard is a collective work. Committees of manufacturers, users, research organizations, government departments and consumers work together to draw up standards that evolve to meet the demands of society and technology. British Standards' staffs act as secretaries to these committees and project manage the production of standards. As the world's oldest National Standards Body, BSI British Standards has over 100 years' experience of bringing together these often very varied viewpoints and of facilitating consensus.

[0109] A person skilled in a variety of art areas will become aware of how these established channels of protocol can become a solution for a spectrum of generically accepted possibilities of digital electronic commerce processing.

[0110] For the every day person, a picture identifies an item, and with a simple character data-interfacing environment, becomes a document that works for many purposes.

[0111] Outer wrapper gets the security container award.

[0112] Further, inert, free of platform and vendor requirements, you could do it!

[0113] The enhanced security, auto processing, cut and paste, and principle human interaction is a unique combination of features related to the electronic document.

[0114] Several steps in regards to XML and digital signatures, as well as the incorporation of the finalized secured data section into the image container requires several stages of steps in order to generate an electronic document of its type.

[0115] The commercial value of the electronic power of attorney relates to many aspects of information, data or other valued managed asset relates to the value of the item itself. Having the capability to support security measures that, when in place, can ensure transactions are done correctly and in form that is verifiable and authenticable then ensures the asset is secure. With this, the value then becomes that of the monetary or other financial worth of the asset itself.

[0116] Included is optional 'receipt' possibilities, where the document's contents and a show of service or directed process is created.

[0117] Multiple embodiments are presented within, and in their accordance, an electronic document apparatus, method, system and its manufacture is presented, teaching a solution for secure independent digital electronic commerce and trade.. Said embodiments allow 'Electronic Commerce and Trade' to be secure and vendor independent. Within each embodiment's system, an apparatus can be manufactured using the method described therein. The electronic documents are proven in process, allowing immediate implementation and use, in similar to that of presented embodiments. An electronic document handling digital signatures, graphic representation, data automation all within an unalterable, verifiable, secure container is explained.

[0118] Use of what's described allows freedom in the commerce world, removal of vendor dependencies, and compliance with standard structure. Therefore, in accordance with the inscribed description, objects, features, drawings and advantages, simple electronic commerce transactions can be executed with proven, well established standard information exchange specifications and recommendations, and can become an asset!?.

[0119] Emca International (Emca) is an international, private (membership-based) non-profit standards organization for information and communication systems. It acquired its name in 1994 European Computer Manufactures Association (EMCA) Geneva, 1961, To standardize systems.

[0120] Mentioned here are a few outstanding embodiments in their 'functional form' wording.

[0121] Document encryption can either be on character data, before any base 64, or on the image data, having image data encrypted/scrambled before image section creation.

[0122] The eXtensible Markup Language (XML) can be used to facilitate implementation of integrated programmable World Wide Web ("Web") based services. Through the exchange of XML-related messages, services can describe their capabilities and allow other services, applications or devices to easily invoke those capabilities. The Simple Object Access Protocol (SOAP) has been developed to further this goal. SOAP is an XML-based mechanism that bridges different object models over the Internet and provides an *open* mechanism for Web services to communicate with one another.

[0123] XML provides a format for describing structured data, and is a markup language that is similar in form to Hyper Text Markup Language (HTML) in that it is a tag-based language. Unlike HTML, however, XML tags are not predefined, permitting greater flexibility than possible with HTML. By providing a facility to define tags and the structural relationship between tags, XML supports the creation of richly structured Web documents.

[0124] The XML standard describes a class of data objects called XML documents and partially describes the behavior of computer programs which process them. XML documents are made up of storage units called entities, which contain either parsed or unparsed data. Parsed data is made up of characters, some of which form character data, and some of which form markup. Markup encodes a description of the document's storage layout and logical structure. XML provides a mechanism to impose constraints on the storage layout and logical structure.

[0125] XML "elements" are structural constructs that include a start tag, an end or close tag, and the information or content that is contained between the tags. A "start tag" is formatted as "<tagname>" and an "end tag" is formatted as "</tagname>".

[0126] In an XML document, start and end tags can be nested within other start and end tags. All elements that occur within a particular element have their start and end tags occur before the end tag of that particular element. This defines a tree-like structure. Each element forms a node in this tree, and potentially has "child" or "branch" nodes. The child nodes represent any XML elements that occur between the start and end tags of the "parent" node.

[0127] One exemplary usage of XML is the exchange of data between different entities, such as client and server computers, in the form of requests and responses. A client might generate a request for information or a request for a certain server action, and a server might generate a response to the client that contains the information or confirms whether the certain action has been performed. The contents of these requests and responses are in the form of XML documents, i.e., sequences of characters that comply with the specification of XML.

[0128] [TITLE] The XML Signature Recommendation (*XML-Signature Syntax and Processing*) defines standard means for specifying information content to be digitally signed, including the ability to select a portion of an XML document to be signed using an XPath transform. [w3c dsign abstract] A specification located at <http://www.w3.org/TR/xmlsig-core/> teaches the current version of the XML digital signature processing rules and syntax.

[0129] XML Signatures provide data *integrity*, message and/or signer authentication services for data of any type, whether located within the XML that includes the signature or elsewhere.

[0130] The SOAP specification defines a uniform way of passing XML-encoded data. It also defines a way to perform remote procedure calls (RPCs) using HTTP as the underlying communication protocol.

[0131] A SOAP message is an XML document that includes a mandatory SOAP envelope, an optional SOAP Header, and a mandatory SOAP Body. SOAP provides a protocol specification for invoking methods on servers, services, components and objects. SOAP codifies the existing practice of using XML and HTTP as a method invocation mechanism. The SOAP specification mandates a small number of HTTP headers that facilitate firewall/proxy filtering. The SOAP specification also mandates an XML vocabulary that is used for representing method parameters, return values, and exceptions.

[0132] SOAP provides an *open*, extensible way for applications to communicate using XML-based messages over the Web, regardless of what operating system, object model or language particular applications may use. SOAP facilitates universal communication by defining a simple, extensible message format in standard XML and thereby providing a way to send that XML message over HTTP.

[0133] Reference throughout this specification to features, advantages, or similar language does not imply that all of the features and advantages that may be realized with the present invention should be or are in any single embodiment of the invention. Rather, language referring to the features and advantages is understood to mean that a specific feature, advantage, or characteristic described in connection with an embodiment is included in at least one embodiment of the present invention. Thus, discussion of the features and advantages, and similar language, throughout this specification may, but do not necessarily, refer to the same embodiment.

[0134] Furthermore, the described features, advantages, and characteristics of the invention may be combined in any suitable manner in one or more embodiments. One skilled in the relevant art will recognize that the invention can be practiced without one or more of the specific features or advantages of a particular embodiment. In other instances, additional features and advantages may be recognized in certain embodiments that may not be present in all embodiments of the invention.

## BRIEF DESCRIPTION OF THE DRAWINGS

[0135] In order for the advantages of the invention to be readily understood, a more particular description of the invention briefly described above will be rendered by reference to specific embodiments that are illustrated in the appended drawings. Understanding that these drawings depict only typical embodiments of the invention and are not therefore to be considered to be limiting of its scope, the invention will be described and explained with additional specificity and detail through the use of the accompanying drawings, in which:

[0136] For a more complete understanding of the present invention, reference is now made to the following descriptions taken in conjunction with the accompanying drawings, in which:

[0137] Listed are drawings that in no way limit the possibilities of the apparatus.

[0138] FIGS. 1A through 1E are block diagrams illustrating an embodiment. FIG 1A is a block diagram of one embodiment in accordance with the present invention. FIGS 1B through 1E are block diagrams of sections within the embodiment.

[0139] FIG 2 is a schematic diagram illustrating some of the types of files, if any, that may be enveloped within an embodiment.

[0140] For the purposes of promoting an understanding of the principles of the invention, reference will now be made to the exemplary embodiments illustrated in the drawings, and specific language will be used to describe the same. It will nevertheless be understood that no limitation of the scope of the invention is thereby intended. Any alterations and further modifications of the inventive features illustrated herein, and any additional applications of the principles of the invention as illustrated herein, which would occur to one skilled in the relevant art and having possession of this disclosure, are to be considered within the scope of the invention.

[0141] Reference throughout this specification to "one embodiment," "an embodiment," or similar language means that a particular feature, structure, or characteristic described in connection with the embodiment is included in at least one embodiment of the present invention. Thus, appearances of the

phrases "one embodiment," "an embodiment," and similar language throughout this specification may, but do not necessarily, all refer to the same embodiment, different embodiments, or component parts of the same or different illustrated invention. Additionally, reference to the wording "an embodiment," or the like, for two or more features, elements, etc. does not mean that the features are related, dissimilar, the same, etc. The use of the term "an embodiment," or similar wording, is merely a convenient phrase to indicate optional features, which may or may not be part of the invention as claimed.

[0142] Each statement of an embodiment is to be considered independent of any other statement of an embodiment despite any use of similar or identical language characterizing each embodiment. Therefore, where one embodiment is identified as "another embodiment," the identified embodiment is independent of any other embodiments characterized by the language "another embodiment." The independent embodiments are considered to be able to be combined in whole or in part one with another as the claims and/or art may direct, either directly or indirectly, implicitly or explicitly.

[0143] Finally, the fact that the wording "an embodiment," or the like, does not appear at the beginning of every sentence in the specification, such as is the practice of some practitioners, is merely a convenience for the reader's clarity. However, it is the intention of this application to incorporate by reference the phrasing "an embodiment," and the like, at the beginning of every sentence herein where logically possible and appropriate.

[0144] As used herein, "comprising," "including," "containing," "is, are," "characterized by," and grammatical equivalents thereof are inclusive or open-ended terms that do not exclude additional unrecited elements or method steps. "Comprising" is to be interpreted as including the more restrictive terms "consisting of" and "consisting essentially of."

[0145] As used herein, "graphic file", "image file", "image", "graphical data", "graphical image", "WMP", "JPG", "BMP", "PNG", "JPG", "TIFF", "GIF", "JIF", "JNG", SVG, and RTF includes any type of a visually graphic humanly perceivable medium or image based data.

[0146] As used herein, "standards group", "ISO", "IEC", W3C" includes any normative group or organization.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 24

[0147] As used herein, "data", "binary data", "raw data" includes data of a generic binary type.

[0148] As used herein, "byte", "character" includes a sequence of 8 adjacent bits; which are operated on as a unit by a computer, and represents an integer from 0 to 255.

[0149] As used herein, "character text", "character data" includes single, double, or multiple byte characters.

[0150] As used herein, "base64", "shrunk", includes the character representation of data in a form any of the ISO W3C ect standards.

[0151] As used herein, "block" continuous, or set amount of continues raw, binary, character text, random byte or other type of data.

[0152] As used herein, "graphic data", "image data", "pixel data" includes any series of visually representative data.

[0153] "Digital signature", "Signtaure", "Notariization", "Digital Notarization", "Cosign", "Countersign", "XML DigSig", "XML Digital Signatures" includes any digital signature data.

[0154] "Envelope", "enveloping signature", "enveloped data" all reference the encompassment of a signature section or block of structured or non-structured data character(s).

[0155] "Raw", "raw data Block", "part of data", "data section", or "blob" means a section of data that is indiscriminant of its type, size, sign or other aspect or attribute of raw

[0156] As used herein, "standards" Standards - Put at its simplest, a standard is an agreed, repeatable way of doing something. It is a published document that contains a technical specification or other precise criteria designed to be used consistently as a rule, guideline, or definition. Standards help to make life simpler and to increase the reliability and the effectiveness of many goods and services we use. Bringing together the experience and expertise of all interested parties such as the producers, sellers, buyers, users and regulators of a particular material, product, process or service creates standards.

[0157] As used herein, "URL" is Universal Resource Locator.

DETAILED DESCRIPTION—FIRST EMBODIMENT—FIGS. 1

[0158] In the following description, for the purpose of explanation, numerous details are set forth, such as diagrams, file types, and arrangements, in order to provide an understanding of one or more embodiments of the present invention. However, it is and will be apparent to one skilled in the art that these specific details are not required in order to practice the present invention.

[0159] Certain embodiments of the securable independent electronic document may be constructed in the following fashion if desired. A text file and a graphics file may be opened simultaneously. Zero or more user files may be embedded into the text file. Security features such as checksums may then be computed on all and / or parts of the text file. The graphics file process may compute checksums or other security features on all and / or parts of the text file and / or all or parts of any embedded user files. The graphics file processing can be made to in essence to take one or more pictures of a visual representation of the text file and its embedded data and therefore these checksums and security features could vary from the security features computed by the text file process. The text file process and the graphics file process may then exchange and write the other process's security feature into its file. Both processes may then each engage in additional processing such as encryption and then compute and write another security feature perhaps by a different method than the prior checksum if desired. This procedure of security feature computation, security feature exchange and save of the other processes' security feature, and re-computation and save of a new security feature may then continue or both the text file and the graphics file may then close. Subsequent inspection of the security features, if allowed by the securable independent electronic document creator, could attest to tamper evidence in either or both of the text file or graphics file portions. Additionally, if allowed by the securable independent electronic document creator, visual validation may be available in either or both the text file and graphics file portions. A human and/or an OCR, or other type of pattern recognition software may make this visual check.

[0160] One embodiment as illustrated in **FIG 1A 100** has any User File **130** or none at all inside a [XML] markup file **120** and **140** enveloped by a [PNG] graphics file **110** and **150**. In **FIGS 1A** through **1E**, XML and PNG are shown as the markup and graphics files respectively, although in certain embodiments, other choices may exist for both. Either or both the [XML] markup file and the [PNG] graphics file may have intrinsic security features [CRC's]. As an example, **FIG 1F** shows a typical arrangement of a PNG data block or chunk with some data elements **191** through **195** and the security feature **196** at the end of the chunk. In the case of the PNG format, the data security feature takes the form of a cyclic redundancy check or CRC computed on the contents of that data chunk. In this and other file formats, other kinds, numbers, and placements of intrinsic and constructed security features may occur. Naturally, it is appreciated that variations are possible and considered within the scope of the example and embodiments.

[0161] In certain embodiments, either or both the [XML] markup file and the [PNG] graphics file may include zero or more Digital Signatures and / or Counter-Signatures of various forms. **FIGS 1B** and **1C** show as an example, typical PNG file header and file end sections respectively. In the case of the PNG file format, the structure of the file is quite flexible with regards to occurrence, number, and arrangement of data blocks or chunks after the IHDR chunk **FIG 1B.111** and before the IEND chunk **FIG 1C.159**. Continuation with an example of a use of the PNG file format in an embodiment, the markup language file and user file component, if any user files are included at all, may be inserted in zero or more Ztxt chunks **FIG 1B.113** and / or **FIG 1C.155**; and / or zero or more tEXT chunks **FIG 1B.114** and / or **FIG 1C.153**; and / or zero or more iTXT chunks **FIG 1B.115** and / or **FIG 1C.154**; and / or zero or more IDAT chunks **FIG 1B.117** and / or **FIG 1C.151**; and / or zero or more Other Sections **FIG 1B.116** and / or **FIG 1C.152**. In various embodiments, Digital Signatures **FIG 1B.112** may be added before the included data. In other embodiments, Digital Signatures **FIG 1C.156** may be added near the end of the graphics file. Still other embodiments may have Digital Signatures **FIG 1B.112** and **FIG 1C.156** both before and after the included file or no Digital Signatures at all in the graphics file portion.

[0162] Embodiments may also possess Digital Signatures in the markup file portion. As an example, in XML markup language, the World Wide Web Consortium (W3C) is just one organization that proposes and maintains standards and routines regarding Digital Signatures. Notarization elements and or files may also be included as appropriate.

[0163] The PNG file structure permits the inclusion **FIG 1B.113-116** and **FIG 1C.152-155** of several types of text data blocks or chunks and other optional types of data chunks in a file. Many of these kinds of data chunks are quite flexible as to what is precisely put into them. Various embodiments could place into these chunks information concerning advanced security features, encryption, digital rights, and / or other uses. In an example of a use of the PNG specification as the graphics file in an embodiment, the **FIG 1B.117** and **FIG 1C.151** IDAT chunks could also carry information concerning advanced security features, encryption, digital rights, and / or other uses as well. Furthermore, an embodiment that uses the PNG specification may also contain user created chunks fabricated within the rules of the specification for the purposes of advanced security, encryption, digital rights, and / or other uses as well as the pre-described chunk types.

[0164] Either or both the [XML] markup file and the [PNG] graphics file may include zero or more Optional Data Block[s] for any combination of the purposes of Advanced Security, Encryption[s], Rights, or other uses. Also, zero or more Notarizations and / or Counter-Signatures may be included. The file creator may retain, 3rd party archive, transmit, and or post the security feature[s], Digital Signatures, and Optional Data Block[s] as required. Notaries / Counter-Signers may retain, 3rd party archive, transmit, and or post as required. The embodiment receiver may check the security features [CRC's] and Digital Signatures, Notarizations, and Counter-Signatures as required. The embodiment receiver and intermediate handlers access the Optional Data Block[s] as required by the embodiment creator.

[0165] The markup file may also contain **FIG 1D.122** and **FIG 1E.141** optional sections and / or files. An embodiment could use these data to support any combination of advanced security, encryption, digital rights, non-repudiation (e.g., evidencing that a document was signed by a particular entity at a particular date and time), field validation (e.g., checking that information in a document complies with content category rules), and / or other uses as appropriate. In the case of the XML, the W3C maintains

routines to convert 8 bit data to 6 bit data and the inverse conversion 6 bit to 8 bit data with no losses of bits. These conversion routines may facilitate the inclusion of files within the markup portion of an embodiment although other conversion routines may be appropriate for certain applications.

[0166] When an originator has completed a securable independent electronic document, they may have access to several kinds of information they included and, perhaps, beyond what they put in. For their particular instance of an embodiment, there may exist zero or more files, CRCs', basic and / or advanced security features, encryption data, digital rights, digital signatures, notarizations, and other data.

[0167] FIG X and Xa show an electronic document using some of the combinations above. For instance, with the Power of Attorney electronic document shown in Fig X. the securable independent electronic document 100 has the graph 80, the text section 5, and data populating

[0168] In certain embodiments, it may appropriate for the originator to have access to none, some, or all of this information. They then may choose to retain, post, transmit to the receiver or third parties whatever portion of that information is reasonable or required. The receiver of a securable independent electronic document may have access to none, some, or all of the information about it or within it also. If reasonable or desired in certain embodiments, the receiver may verify information within and / or about a securable independent electronic document to check for evidence of tampering, validity, and other qualities. Embodiments may also permit one or more third parties to attest to the veracity of a securable independent electronic document.

[0169] Embodiments may be constructed that include an electronic representation of a legal document such as a bond, surety coupon, mortgage, or other legal document. The electronic document creator may then include one or more digital signatures in the markup language portion in accordance with guidelines set forth by the W3C XML digital signature recommendation of June 10, 2008 and / or other methods. It may be reasonably concluded that the markup language portion of a securable independent electronic document construction thus far conforms to often adopted standards and is within the scope of legal rules and regulation such as the UETA statute.

[0170] Intermediate participants such as witnesses, co-signers, counter-signers, notaries, authorizing / approving parties, and others may need only to conform to their requirements within rules and regulation to maintain the legal operability of the included legal document within a securable independent electronic document construct markup language file portion. In certain applications, when the outer graphics file portion of a securable independent electronic document construct readies to envelope the inner markup language file portion with its included document, additional steps may be taken.

[0171] It may be desirable to make any number of pictorial representations of the included document and / or its markup language component in part and / or in its entirety, which may be saved within the outer graphics file portion of a securable independent electronic document. Additional security features may also be computed on the whole or multiple parts of the inner markup language portion with the included document, which enhances the tamper evidence qualities of a securable independent electronic document.

[0172] Embodiments may be constructed having one or more securable independent electronic documents inside a securable independent electronic document. Other regular files may also be interspersed with securable independent electronic document's inside the outermost securable independent electronic document. Embedded securable independent electronic document's may also envelope further embedded securable independent electronic document's and other files. Embodiments may choose to work on the included document and its securable independent electronic document envelope in a easily readable plain-text form. An electronic document creator may construct a securable independent electronic document and then encrypt in its entirety. Information about the encryption may be stored in a second securable independent electronic document that may also contain the entire encrypted securable independent electronic document, some piece of it, or none at all. Encryption information, the encrypted whole or fragmented securable independent electronic document, which may also be inside other securable independent electronic document's, may then take separate routes to the electronic document receiver. The electronic document receiver may then decrypt and / or reconstruct all or part of the originally encrypted securable independent electronic document as appropriate.

## CONCLUSION, RAMIFICATIONS, AND SCOPE

[0173] Advantageously, the securable independent electronic document offers document creators, handlers, and recipients more opportunity and flexibility in selecting tools for data integrity, data security, data validation, data auditing, and support for other mission critical data processing needs.

[0174] The securable independent electronic document users are given the opportunity to create and / or acquire their own tools for document data processing operations. The above-mentioned tools are not necessarily limited in their scope of operation.

[0175] The document creators may be able to choose the level of interaction with outside third parties in document creation and handling.

[0176] The securable independent electronic document may be transmitted simply, such as an attachment to an email; and may be handled with tools common to the browser environment.

[0177] The signature block that contains a section for dynamic data, which is user data or other XML formatted type, including base64 MIME type of encoded data, which allows any random raw binary or character data to be inserted inside the signature block and therefore become candidate for digitally signing. Further, reference to an external object data block can be made, which therefore then includes the referenced material when the digital signature digest value is computed, even though the signed material may be outside the electronic document container.

[0178] Digital signatures can be presented in multiple forms. Adjacent, cosignatures or nested signatures enhance data integrity.

[0179] Digital signatures can be applied to both text and graphic image data sections. Multiple sections within a single text data section allow for digital signature operations to be done to both types of data sections.

[0180] Specific functionality on various types of graphic files allow for larger embedded sections. Further, additional types of data can be placed in the document, having other containment section compartments supporting other various data models. Further, these compartments can contain further

security measures, ensuring yet better containment validity, such as extended content digital signature capabilities.

[0181] The character portion of the container may contain a description of an image, in a graphic section. A graphic section can also contain an image of text, security features, encryption keys, access methods and rights, or other data. A graphic section can contain an interpreted key for a XML section. Example: A picture of a zebra could be coded image='ZEBRA', or other codeword, as well as 'embedded' values, such as a key chain. Either can be first to be created, having support by the other accordingly. In the case of creating the text first, the graphic can contain information (in graphic form), supporting original text information. Later, the text can then finish up with data supporting the graphical equivalent of the original text data to be protected.

[0182] Automated data, graphical data, and a host of other data types work to make the document securable. For example, a code word on the phone could go with a picture and be input to the automated processed text.

[0183] A wide variety of well-adopted applications already support the document.

[0184] Various encryption, security methods, or other technologies in existence, or possibly created in the future, may be implemented in the securable document container. This allows a flexible set of circumstances for enhanced document integrity.

[0185] Multiple page documents can be presented as a series of electronic documents, having the electronic document's contents independent of any header or ending container portions.

[0186] Image sections of the electronic document, its embedded documents or a combination of documents could be combined to present one totality picture. The data for these could be combined or otherwise accumulated accordingly to present a completed pictorial of the overall data environment.

[0187] Self type embedded documents support process flow and management.

[0188] Digital signatures use XML. The graphic image container PNG can support content digital signatures, which, with a specified data set, can present signatures further preserving data integrity.

[0189] Self type embedded documents support process flow and management.

[0190] Notarization or witnessing type of either acknowledgement or Juret based can be part of the document and would follow laws, statutes or other regulations in place to support commerce for a digital transaction. These laws have been in place since early 2000 for most states, having uniform acceptance to these laws commonly in place now.

[0191] Its copy is its original, having both the data and visual support included in a single container package.

[0192] Document is in its best archival state and requires no further processing for indefinite storage and retrieval needs.

[0193] Vendor verification allows for private 'in house' vendor specific trade secret secure, reliable confirmation. (Tumblers placed internally known only to internal processes, generating a result whose algorithmic generation is completely contained in vendors' control.

[0194] With this single container, and the bounds of data limitless, the extra protection sought became more and more. Soon, security possibilities evolved. Usable features become to exist.

[0195] Although the description above contains many specificities, these should not be construed as limiting the scope of the embodiments but as merely providing illustrations of some of the presently preferred embodiments. For example, the document can have other purposes, such as , ect.

[0196] Thus, the scope of the embodiments should be determined by the appended claims and their legal equivalents, rather than by the examples given,

[0197] It is understood that the above-described embodiments are only illustrative of the application of the principles of the present ELECTRONIC DOCUMENT apparatus taught within. The electronic document may be embodied in other specific forms without departing from its spirit or essential characteristics. The described embodiments are to be considered in all respects only as illustrative and not restrictive. The scope of the document apparatus is, therefore, indicated by the appended claims

rather than by the foregoing descriptions. All changes, which come within the meaning and range of equivalency of the claims, are to be embraced within their scope.

[0198] Similarly, one skilled in the art would appreciate a postable resume complete with structured information concerning employment and other tangible data items that would be relative to an applicant's qualifications.

[0199] As another example, it is envisioned that the electronic document could be that of an issued patent, or published application, having tangible data represented for automation means of cataloging or other reference. Alternately, correspondence could include control structure information supporting the office type actions and / or replies.

[0200] It is also envisioned a graphic image can present a picture that contains a required process or step. The character text could include validation or authentication text, which can include English type instructions, which describe the format of the data originally placed, or otherwise represented in the graphic form.

[0201] It is expected that there could be numerous variations of the design of this invention. For example, the graphic component may consist of colors, shapes, and other visual data. Further, the character text can incorporate multiple embedded documents, digital signature blocks, or other embedded and / or encoded data in any combination.

[0202] It is also expected that another design variation of the document would be an embodiment where there may be a receipt attached to the document, using self document type embedding, where an original order or other request is encompassed inside the receipt when the order or other request is fulfilled.

[0203] It is envisioned that the components of the electronic document and method may be constructed with a variety of information. For example, the character text component can included scripting, command language, or other digital represented formats. Further, its graphical component could include barcodes, object character recognition formatted data, as well as visually confirming data.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 34

[0204] It is also to be realized that the components of the electronic document may be constructed of a variety of processes. In addition, component steps can be separated, each creating separate documents, and finally assembled together.

[0205] Finally, it is envisioned that the components of the electronic document may be constructed of a variety of procedures. For example, its creation could be in a controlled processing environment, with procedures creating individual sections of the document before final construction.

[0206] Thus, while the present invention has been fully described above, with particularity and detail in connection with what is presently deemed to be the most practical and preferred embodiment of the invention, it will be apparent to those of ordinary skill in the art that numerous modifications. Including, but not limited to, variations in size, materials, shape, form, function and manner of operation, assembly and use may be made, without departing from the principles and concepts of the invention as set forth in the claims.

That which is claimed is:

1. An information handling apparatus, said information handling apparatus consisting of:

a container, adapted for a plurality of data types of sectional components, said sectional components' comprising:

at least one data component,

wherein when said data component is comprised of a character text data type, said component comprises:

a character text data, said character text data coupled to:

a first interfacing means, wherein said character text data can be processed in an automated fashion in a computer system,

a second interfacing means, wherein said character text data comprises text characters, said characters are able to be interpreted and understood with human interaction,

a first referencing means, wherein said character text data can reference external file data using a uniform resource locator or identifier,

a first encoding means, wherein said character text data can be of an encoded type,

a first embedding means, wherein said character text data of said encoded type can contain filed data of any type, including that of said apparatus container, and

Patent Application of John Lewis Guymon Jr for  
“Securable Independent Electronic Document”  
Page 36

a first integrity means, wherein said character text data can be of an encrypted format; and

at least one additional sectional data component selected from a plurality of data types,

wherein when said data component is comprised of a graphical image data type, said component comprises:

a graphical image data, said graphical image data coupled to:

a third interfacing means, wherein said graphical image data can be digitally processed in an automated fashion in a computer graphic processing system,

a fourth interfacing means, wherein said graphical image data can be realized and perceived with human interaction, and

a second integrity means, wherein said graphical image data can be of an encrypted type;

said sectional component container coupled to:

a fifth interfacing means, wherein said container’s binary file format type allows direct, non-altered, single byte precision, original ‘incrementally-filed’ data handling and storage,

a first independence means, wherein said container’s sectional component’s creation, processing or storage can be independent of said container’s contents creation,

a third integrity means, wherein said container's sectional component's creation, processing or storage can be independent from intervention of said container's association,

a fourth integrity means, wherein said container's sectional component(s) coupled to other said container's sectional components(s) can include data integrity check information of said other container's sectional component(s),

a fifth integrity means, wherein said container's format of a normative standard type further allows said container's creation, processing and/or storage to be independent of intervention from additional party association,

a second independence means, wherein said container's format of a normative standard type further allows said container's creation, processing and/or storage to be independent of an additional required party or parties' interaction,

a third independence means, wherein said container's format of a normative standard type further allows said container's validation to be independent of an additional party or parties' interaction, and

a fourth independence means, wherein said container's format of a normative standard type further allows said container's creation, processing and/or storage to be independent of a computing platform type.

2. The information handling apparatus of Claim 1, having said character text data further comprising:

at least one character text digital signature data section(s), said character text digital signature data section(s) coupled to:

a digital signing means, wherein said character text digital signature data section type can be at least one of the following: (i) signature; (ii) co-signature; (iii) counter-signature.

3. The information handling apparatus of Claim 2, having said container further comprising:

at least one digital signature data component, said digital signature data component comprising:

at least one digital signature data section, said digital signature data coupled to:

a subsequent digital signing means, wherein said digital signature data type can be at least one of the following: (i) signature; (ii) co-signature; (iii) counter-signature.

4. The information handling apparatus of Claim 3, having said container's component sections' further comprising:

at least one hash check value, wherein said hash check value is computed for the said component section.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 39

ABSTRACT:

In accordance with embodiments within, a securable independent electronic document apparatus is taught. With an authenticable and tamper detectable electronic container, elements and sections supporting platform, vendor and authentication independence, data sections and elements supporting, if user desired, digital signatures, data automation and nested embedding, graphical image data, and/or other types of data elements and sections supporting perceptual integrity and authenticity verification, and/or other free formatted data elements and sections supporting a plurality of types of data processing operations, and, if user desired, imaging representation comprised within a container using a securable and independent system. The securable independent electronic document apparatus presents solutions for the personal unique and interwoven creation and enhancement of user and document security and confidence in electronic data information's digital distribution, commerce, trade, publishing and/or exchange.

Patent Application of

John Lewis Guymon Jr

for

TITLE: SECURABLE INDEPENDENT ELECTRONIC DOCUMENT

CROSS-REFERENCE TO RELATED APPLICATIONS

[0001] This application claims benefit of a Disclosure Document filed with the USPTO, titled “~~IntelLEDoc~~Intelledoc<sup>®</sup> – Intelligent Electronic Document”, Serial No. 610142, filed December 16, 2006.

[0002] This application claims benefit of a Disclosure Document filed with the USPTO, titled “eSuretyBailBond - Electronic Surety Bail Bond”, Serial No. 610141, filed December 16, 2006.

FEDERALLY SPONSORED RESEARCH

[0003] Not Applicable

BACKGROUND—FIELD

[0004] Inscribed within generally relates to information handling and specifically to electronic documents. Various aspects of an electronic document ~~container~~apparatus are described within and are particularly applicable to the security and manufacture of the document, ~~its manufacture, method, and container,~~ as well as a few of the many involved processes, methods of use and possible ~~comprised system,~~systems of the apparatus. Additional aspects presented relate to ~~its~~the electronic

document's methods of handling and use, for example in providing flexible, secure and independent information delivery in industries of securities, commerce and trade and/or exchange.

#### BACKGROUND OF THE INVENTION—PRIOR ART

[0005] With life, there is the digital world. With information, there is the digital world. Now days, they are one in the same. We are always asking, "Is it secure?" We live, having our world untouched by anyone else, desiring so much to have things as we left them; ~~Untouched,~~ untouched.

[0006] The technology available today allows life to seemingly flow at the speed close to that of light itself. We are literally there before we finish the push of the button. We struggle to comprehend such speeds, and will continue to do so, in such a dynamic and fast paced world. Information should be handled with care. To maintain the integrity of our intent, it must be secure.

[0007] In order to facilitate the creation and editing of electronic documents containing our information world, vast amounts of variable types of technology can be used. Agreed upon formats, specifications, recommendations and other standard defined help in accomplishing a particular task with greater information exchange and security.

[0008] Information exists in many variable formats and is transported in a vast spectrum of ways. Within the digital world, a substantial format set is available for equally substantial information type accommodations. For instance, character data handling is accomplished using text-based languages supporting a functional 'mark up' approach, having data populated with tags or other identification delimiters or data descriptors. **These forms are of the markup language family, such as those of SGML, XML, HTML, cXML and other text based formats that are among the multiple multiples of these established containment types.** ~~Further image, and other visually handled data, is accomplished using graphic based container types. Visual information is often supported using graphic image based file formats, such as PNG, JPG, TIFF, GIF, BMP or and others established in the market place.~~

[0009] The basis of the teaching is to facilitate knowledge in the area of information processing and exchange. There are some electronic information document type containers that have been developed

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 3

recently with the inability to support the secure and independent exchange as presented and taught in the following.

[0010] Document handling systems, databases and vault systems, as well as other transaction oriented processes, information transfers and data representations. For the purpose of this disclosure and illustration of multiple embodiments, the various possible configurations of an electronic document are focused upon for reasons of security, independence, flexibility in construction, and in support of other needs.

[0011] Tangible document content range from simple character text to full color text data, with external formatting information to image data of varying form, to audio and multimedia data, to metadata, to binary data-, all of which can be included within.

[0012] All areas of industry require documents, many of which have security/requirements/needs. Specifically, insurance, mortgage, securities, as well as other financially based documents; many have highly regulated legal requirements. The required technology for their electronic handling was arguably unavailable for the most part prior to the turn of the Millennium. Considerable energy to create a "paperless world" has been expended, and these efforts are ongoing. Despite all of the world's labors, highly valued documents still often remain in paper form. Where is an electronic container that will secure these assets digitally?

[0013] Viewing a graphic image may include the perception of dots, lines, characters, scripts, meshes, shades, arrangement, proportion, scale, and color. Content is presented reflecting true life and nature. Real life and nurture tells us information is here, whether it is an artistic representation of a data element or value or an intense artistic representation of the elements in life itself. A picture has been said to be worth a thousand words. Data in image form often possess substantial information content.

[0014] Similar, character text can be perceived visually. Character text in this same form can also be processed systematically. Character data is based on memory addressing units, having an array of

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"

Page 4

different character representations available for the different character text data unit values. Character text includes the letters making up the words you read here. Information in its everyday basic simplest form is here, here, written with the letters of each and every one of these words that you read.

[0015] The usage of paper forms is a predominant method for producing documents, and these forms tend to have a fixed layout and some areas of variable content. The desire to electronically create and process the information contained within documents has existed for some time and will continue.

With electronic processing means, documents can be better adapted for digital commerce, trade, and exchange of transactions. Providing a container to envelope these documents increases the electronic options available for their support.

[0016] Bonds, ~~Powers~~powers of attorney, ~~Title~~titles, deeds, leases, judgments, motions, affidavits, and other paper documents have been in use for long periods of time. These document types, in either original paper only medium or in a digital graphic memory contain a visual image or picture of the actual information that is of a transaction. Electronic form allows information storage and handling up and beyond that of the visual image-handling interface. Within digital data memory capabilities lay the ability for raw character based data to be represented. Having the two different data representation types for the information, those that of graphical image and character text, a container ~~could be~~is built to handle exchange and transaction. Either singly or in combination, ~~the~~ character text and graphical image data components can be present for information conveyance. Only recently have these documents had the support in place needed to facilitate ~~their complete~~the document's handling completely using electronic means. Now, with the ability in place to facilitate both character text and graphical image components, the harmony in its presentation, handling, independence and security relies on a few key issues, specifically what is needed and how can it be done?

[0017] Information handling has its required attention and resource requirements. Security issues mandate a majority of container development process. A system built upon a well working container that includes independency from outside system requirements extends the efficiency and control of internal resources. Such efficiency and control can be maximized, becoming a secure independent electronic document solution.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 5

[0018] Monetary based transactions have been in existence before the printed money it represented was. Trade and commerce, along with exchange, barter, vendor or vender oriented agreements have had a need to be facilitated in some fashion, similar to the mineral exchange of gold, silver, platinum and others. Money, specifically paper money and coin, is a commonplace vehicle for resource structured exchange and management. Monetary based items, assets, transactions and other commonplace vehicles structured on such systems all speak of the same desire and need, that being value and asset management and exchange.

[0019] Industries, such as those of the Surety, Insurance or Bail Bonding industries, have used tangible based financial supporting documents since the beginning of human based insurance back.

[0020] To represent this industry, a representation of both the 'graphical image' and 'character text' must be included for complete adapted functionality. Security is based on party involvement and need to know regulations. If independence from 'third' party is further supplied, security is only enhanced. Having your own way of packaging, distribution, processing, transacting, verifying, or authenticating document information with no internally placed outside based party is a must. Technology is available for such a system. Notarizations, or witness related verifications, have been around since times of Kings and Queens; however, for the digital equivalent, the technology has only been around since the years of the turn of the Millennium. What is needed is the independent container that supports the highest statutes backed electronic information handling possibilities defined today.

[0021] The options of markup type languages such as XML and others as the main structural component for document and sub-document handling needs has become a world wide accepted way of handling the inter-relational aspects of data files and their containment handling, grouping or other object or element structuring of relational data. The extreme ends of the data type spectrum are those of character text and graphical image. 'Graphical image' as the container for the character text becomes the solution more so than character text as the container for the graphical image.

[0022] Independent 'graphic image' containers further support handing, interface and integrity means required for enhancing security of electronic document contents. The need for digital signature signed data was necessary as well. The combination of the three increased the security measures in place.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 6

Again, security is further enhanced with the independence from other non-invited or desired parties. Further, with the ability to develop applications in house, easily, with world wide support allows a simpler manufacturing environment, reduces costs of such environments, and eases or completely releases restrictions for development, distribution, interaction, verification, authentication and achieve of the container, further developing its independence.

[0023] Many ways of handling information are reliant upon commercial or other vendor or vender interaction. Further, there are restrictions in how data is processed, or, even further, the previous art present only parts of the electronic document apparatus, having other parts and systems and other commercially interlaced information transmissions and exchanges. Original documents are sometimes made from scanned sources, virtually removing the dynamic allocation and build properties available in a real time document manufacturing process. Additionally, some information or other image data embedding arts actually go further than that, and forever alter or restrict the original image content.

[0024] This has made and is making digital information transfer complex; further, only parts of the solution exist. A mirage of devices, interfaces, methods, all exist, and these pieces and sub standard methods creates more problems. The issue is of interoperation of the document contents. With the people involved, methods of transfer, degree of security, and control of all entities and their parties involved, there is a dedicated portion of document handling and security that needs attention.

[0025] Feature rich vendor supplied solutions are sometimes richer in content than desired. Features that are not always necessary for commonplace transactions are become common all over the place hurdles always necessary that are not features. Further, a solution that answers to all needs are in fact sometimes too much.

[0026] Prior art shows examples of complete systems that present a way of electronic document control. None of the references would piece apart or combine together to create the electronic document, specifically with regard to standards.

[0027] Prior art handles electronic documents and its delivery in different ways, further having mechanisms or apparatus that are different and act differently.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 7

[0028] Different prior art references teach handling of data in an electronic document differently. Some alter data of an image; some built a system that comprises the document.

[0029] What is needed is a securable independent electronic document that solves one or more problems described herein and/or one or more problems that may come to the attention of one skilled in the art upon becoming familiar with this specification.

[0030] Prior art consists of a variety of document container, their methods and their uses. The field presents several related prior art references that offer some improvements made in the field to resolve these issues. Examples include but are not limited to the references described below, which references are incorporated by reference herein:

[0031] U.S. Pat. No. 7,451,156 issued to Ornstein, et al. sets forth a METHOD AND APPARATUS FOR MAINTAINING RELATIONSHIPS BETWEEN PARTS IN A PACKAGE.

[0032] U.S. Pat. No. 7,441,185 issued to Coulson, et al. sets forth a METHOD AND SYSTEM FOR BINARY SERIALIZATION OF DOCUMENTS, teaches documents are considered main that of text XML, and this process reduces the XML's footprint as it is transferred.

[0033] U.S. Pat. No. 7,418,652 issued to Ornstein, et al. sets forth a METHOD AND APPARATUS FOR INTERLEAVING PARTS OF A DOCUMENT.

[0034] U.S. Pat. No. 7,383,502 issued to Shur, et al. sets forth PACKAGES THAT CONTAIN PRE-PAGINATED DOCUMENTS.

[0035] U.S. Pat. No. 7,383,500 issued to Shur, et al. sets forth METHODS AND SYSTEMS FOR BUILDING PACKAGES THAT CONTAIN PRE-PAGINATED DOCUMENTS.

[0036] U.S. Pat. No. 7,373,330 issued to Klebe sets forth a METHOD AND APPARATUS FOR TRACKING AND CONTROLLING E-MAIL FORWARDING OF ENCRYPTED DOCUMENTS, teaches multiple publisher type oriented apparatus to request, email, download program and data and decrypt data.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 8

[0037] U.S. Pat. No. 7,366,982 issued to Shur, et al. sets forth PACKAGES THAT CONTAIN PRE-PAGINATED DOCUMENTS.

[0038] U.S. Pat. No. 7,359,902 issued to Ornstein, et al. sets forth a METHOD AND APPARATUS FOR MAINTAINING RELATIONSHIPS BETWEEN PARTS IN A PACKAGE, teaches a package system using XML.

[0039] U.S. Pat. No. 7,356,143 issued to Morten sets forth a SYSTEM, METHOD, AND APPARATUS FOR SECURELY PROVIDING CONTENT VIEWABLE ON A SECURE DEVICE, teaches Media player doing encrypt and decrypt steps.

[0040] U.S. Pat. No. 7,343,339 issued to Harrison Jr., et al. sets forth an ELECTRONIC BOND AND GUARANTY PROCESS AND BUSINESS METHOD.

[0041] U.S. Pat. No. 7,330,974 issued to Silverbrook, et al. sets forth a METHOD AND SYSTEM FOR DELIVERY OF A SECURE DOCUMENT, teaches altering images with message data.

[0042] U.S. Pat. No. 7,330,560 issued to Donescu sets forth an INSERTION AND EXTRACTION OF A MESSAGE IN AN IMAGE.

[0043] U.S. Pat. No. 7,299,408 issued to Daconta, et al. sets forth an ELECTRONIC DOCUMENT VALIDATION.

[0044] U.S. Pat. No. 7,296,217 issued to Earnshaw, et al. sets forth an ELECTRONIC TRANSACTION DOCUMENT SYSTEM.

[0045] U.S. Pat. No. 7,295,207 issued to Yoon, et al. sets forth a METHOD FOR MANAGING ANIMATION CHUNK DATA AND ITS ATTRIBUTE INFORMATION FOR USE IN AN INTERACTIVE DISC.

[0046] U.S. Pat. No. 7,251,832 issued to Venters, III, et al. sets forth a SECURE STREAMING CONTAINER, teaches open streaming channel of media from specific exe.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 9

[0047] U.S. Pat. No. 7,251,644 issued to Viola, et al. sets forth PROCESSING AN ELECTRONIC DOCUMENT FOR INFORMATION EXTRACTION.

[0048] U.S. Pat. No. 7,199,804 issued to Bhattacharyay, et al. sets forth INK INFORMATION IN IMAGE FILES.

[0049] U.S. Pat. No. 7,191,392 issued to Coar sets forth a SYSTEM AND METHOD FOR THE CREATION OF VIRTUAL INFORMATION PACKAGES, teaches Combination of files into a package, with access rule.

[0050] U.S. Pat. No. 7,191,186 issued to Pullen sets for a METHOD AND COMPUTER-READABLE MEDIUM FOR IMPORTING AND EXPORTING HIERARCHICALLY STRUCTURED DATA.

[0051] U.S. Pat. No. 7,181,017 issued to Nagel, et al. sets forth a SYSTEM AND METHOD FOR SECURE THREE-PARTY COMMUNICATIONS.

[0052] U.S. Pat. No. 7,172,122 issued to Alleshouse sets forth an XML SYSTEM.

[0053] U.S. Pat. No. 7,089,248 issued to King, et al. sets forth a GROUP FILE DELIVERY INCLUDING USER-DEFINED METADATA.

[0054] U.S. Pat. No. 6,954,542 issued to Miyake, et al. sets forth an IMAGE PROCESSING APPARATUS AND METHOD, teaches an application to put information into pixel image.

[0055] U.S. Pat. No. 6,908,034 issued to Alleshouse sets forth an XML SYSTEM.

[0056] U.S. Pat. No. 6,862,599 issued to King sets forth a SOFTWARE-BASED METHODOLOGY FOR THE STORAGE AND RETRIEVAL OF DIVERSE INFORMATION, teaches Pointer management for hierarchy based data.

[0057] U.S. Pat. No. 6,643,383 issued to Dugelay sets forth a METHOD FOR HIDING BINARY DATA IN A DIGITAL IMAGE.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 10

[0058] U.S. Pat. No. 6,616,702 issued to Tonkin sets forth PREVIEWING AN ASSEMBLED DOCUMENT.

[0059] U.S. Pat. No. 6,507,858 issued to Kanerva, et al. sets forth a SYSTEM AND METHOD FOR STORING ORDERED SECTIONS HAVING DIFFERENT FILE FORMATS.

[0060] U.S. Pat. No. 6,342,954 issued to Hisatomi, et al. sets forth an IMAGE INFORMATION PROCESSOR AND IMAGE INFORMATION TRANSMITTER.

[0061] U.S. Pat. No. 6,192,138 issued to Yamadaji sets forth an APPARATUS AND METHOD FOR EMBEDDING/UNEMBEDDING SUPPLEMENTAL INFORMATION, teaches Image and watermarking.

[0062] U.S. Pat. No. 6,138,119 issued to Hall, et al. sets forth TECHNIQUES FOR DEFINING, USING AND MANIPULATING RIGHTS MANAGEMENT DATA STRUCTURES, teaches techniques for defining, using and manipulating digital rights management data structures.

[0063] U.S. Pat. No. 6,055,321 issued to Numao, et al. sets forth a SYSTEM AND METHOD FOR HIDING AND EXTRACTING MESSAGE DATA IN MULTIMEDIA DATA, teaches hardware for examining media extracting message from transformed/scrambled data in media.

[0064] U.S. Pat. No. 5,894,558 issued to Falker sets forth a METHOD OF DISPATCHING DOCUMENTS BY CONVERTING THE DOCUMENTS FROM A CUSTOMER SPECIFIC DATA FORMAT TO A STANDARDIZED DATA FORMAT, AND THEN TRANSMITTING THE DOCUMENTS VIA MOST FAVORABLE WAY TO RECIPIENTS.

[0065] U.S. Pat. No. 5,778,372 issued to Cordell, et al. sets forth REMOTE RETRIEVAL AND DISPLAY MANAGEMENT OF ELECTRONIC DOCUMENT WITH INCORPORATED IMAGES.

[0066] U.S. Pat Application 20070106932, Coar, sets forth a SYSTEM AND METHOD FOR THE CREATION OF VIRTUAL INFORMATION PACKAGES, teaches a container of files with access rules.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 11

[0067] U.S. Pat Application 20070011457, Dubinsky, et al. sets forth a METHOD FOR DISPLAYING AND PRINTING DIFFERENT SIZES OF SMART DOCS, teaches a visual display method for viewing a document, solving previous display issues.

[0068] U.S. Pat Application 20060150151, Dubinsky, sets forth a METHOD AND SYSTEM FOR EMBEDDING USER ASSISTANCE IN DOCUMENTS UTILIZING MARKUP LANGUAGES, teaches a system and method for providing user assistance directly in the document, where the document is of the XML type.

[0069] U.S. Pat Application 20060136477, Bishop, et al. sets forth a MANAGEMENT AND USE OF DATA IN A COMPUTER GENERATED DOCUMENT, teaches a multipart electronic document allowing sectional sub-document editing and control.

[0070] U.S. Pat Application 20060080599, Dubinsky, sets forth a METHOD AND SYSTEM FOR BUILDING AUDIT RULE SETS FOR ELECTRONIC AUDITING OF DOCUMENTS, teaches a system and method for creating documents, audit rule-sets and testing requirements. Included is application software for creation of rule sets and properties, having the software limit the documents full use and potential. The document is based exclusively on XML components with a reduced feature set capability.

[0071] U.S. Pat Application 20050138382, Hougaard, et al. sets forth a METHOD AND PROCESS FOR CREATING AN ELECTRONICALLY SIGNED DOCUMENT.

[0072] U.S. Pat Application 20040237040, Malkin, et al. sets forth a SYSTEM AND METHOD OF PROCESSING AN ELECTRONIC FORM USING LAYERED ASPECTS.

[0073] U.S. Pat Application 20040128513, Wu, Yen-Hsing, et al. sets forth a SECURED ELECTRONIC DOCUMENT AND METHOD OF VALIDATING THE SAME, teaches a secured electronic document and method for securing documents using printing means.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 12

[0074] U.S. Pat Application 20030046274, Erickson, et al. sets forth a SOFTWARE MEDIA CONTAINER, teaches a secure media container and its handling apparatus for specifically limited digital rights management using a single container with external data and reference thereof.

[0075] U.S. Pat Application 20020066019, Amonou, et al. sets forth INSERTION OF MESSAGES IN DIGITAL DATA, teaches a method and device to make it possible to insert messages in a subset of digital data whilst ensuring the required robustness and invisibility.

[0076] U.S. Pat Application 20020059144, Meffert, et al. sets forth a SECURED CONTENT DELIVERY SYSTEM AND METHOD, teaches implemented PKI encryption between sender and recipient.

[0077] U.S. Pat Application 20010027459, Royal, sets forth a METHOD AND APPARATUS FOR ELECTRONIC DOCUMENT EXCHANGE, teaches a method for document exchange using standard protocols that's flexible and easy to use. Shown is a specific document exchange system using specific relationships. Combination containers are used and are not dedicated document containers.

[0078] While the foregoing described prior art have provided elements of operation, they lack ability to be secure, independent of additional party involvement, having original document authentication, automation, interface and handling functionality;

[0079] Other prior art using methods such as signature mapping on graphic representations, transportation of text based content allowing alteration, outside party interface dependant, commercialized and controlled, content duplicated, specific data format type exceeded, content and cross-content support limited, altered or other missed security measured methods s required for today's digital exchange, commerce, and trade transactions for electronic information.

[0080] Environment in which the document is in is intense and requires enormous resource. The steps forward in processing the idea, the prototype and a working version that could sustain the market vitality are enormous, even though the distances traveled are small.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 13

[0081] Thus, there remains a need in the art for a securable independent electronic document. An apparatus that is securable, easy to use, robust, alteration detectable and independent of other party's involvement, supportive of digital signatures and their witnesses, and supports complete closed party information exchange.

[0082] Prior art heretofore known suffer from a number of disadvantages, which include a number of information integrity processes.

[0083] Without a unique container, individual, simple, in-house defined ways of document processing is not allowed; it's not totally secure, for sure. Further, custom, private handling solutions cannot be used or included, nor can they be conducted, without having total control of this container. A securable independent electronic document container is defined having absolute handling means. Further, it is defined to have intentional dedication to the security within.

[0084] Security is of the utmost importance. Take a bail bond document, for example. The said document becomes a promise that good intentions are desired between all parties. It further shows the urgency and need to solve issues or problems at hand, if any. In this industry, there is a yielding to the way of the more critical needs of humanity. A simple document; a promise of resource or asset; A guarantee that information moves on, without delay. Legal processes and matters thereof are among the highest in need for common humanity based affairs. Each side depends on the document to help with issues of resource management, be-it time or money, or both. Resources close to 'home' influence and shape our lives more than the courts, fees, jails, bonds, sureties, insurances and risks. However, in the system, money has a way of saying something, and incorrect, inefficient and pretend solutions have a way of getting up and moving. The electronic document speaks its monetary and asset value having delay, inefficiency, resistance, or other influences left at the curb.

[0085] People should feel confident of their transactions. Interoperability is one main consideration. The 'binary visually graphic' container is operable among all systems and platform and computer systems. Simple cut and paste. That's all we want! It's possible. In the older DOS editors, the document can be edited, having its internal text contents simply cut and pasted into a new formed

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 14

destination file, and the contents comes alive, executing, establishing, presenting, processing, transacting as needed. Any text, let alone any data, can be in there.

[0086] Cross platform creation for the reading, printing, and processing of the electronic document can occur. Further, as dates continue, as do version oriented software releases, base support will be built in already.

[0087] Developing standards or other normative based recommendations are available which describe many of the possible internal and external working components. Various utilities, tools and other applications are widely available for document creation, delivery, verification, automation, and other transaction processes. With the binary type container can be carried, such as via email or zip file or other box. Graphical applications can display visual images at the same time that text-editing applications can present character texts. The container is well supported. Tools to support are available and free.

[0088] Container could either support easy non-scripting simple graphic data decompression or character text processing interaction. With the simple graphical display being first, generic errors, such as buffer overflows or failed dictionary or image reconstructions. These generally would create internal errors and such would occur and trigger a simple closing, stoppage of processing response, which would cause little disruption. The Process of the character text could be done, generally in either area or 'interfacing' phase of the document. For instance an initial read could be done to the document, exposing its detailed content to the computer for routing and designation delivery, processing, operations and other integrated procedures or functions.

[0089] These sections can have the character data text languages that work within 7 or 8 bit formats. Remember, any data could be placed in a 6 Bit format using the Base64 MIME encoding, which, for example, could be done with international multiple character byte language formats. A use of an extensible markup language (XML), for example digital signatures and extensible hypertext markup language (XHTML), which are commonly used for creating electronic documents. Scripting code, protocol text, server page ASP, batch file process or other such text based formats are easily placed in the text sections.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 15

[0090] Can represent and support a large variety of paper-based documents or electronic based documents.

[0091] Another feature with the electronic document is the ease of handling for document variation. Within any industry, individually dictated practices or other various conditions involved in processing an electronic document is completely supported. For example, in mortgage transactions, certain lenders may have a common set of requirements for document validity, but might supplement these with their own particular requirements.

[0092] Impossible to Combine- The mix of the two environments, character text and graphic, is the combination of the two different environments that have evolved since the beginning of computer systems.

[0093] Rewrite The present invention can be embodied in various forms, including business processes, computer implemented methods, computer program products, computer systems and networks, user interfaces, application programming interfaces, and the like.

[0094] Prior art have differences in their presentation of the electronic document, and therefore are complete solutions that do not interact. Further, some references have technology reversed, showing combination can still be unobvious.

[0095] The World Wide Web Consortium (W3C) is the organization responsible for the XML standard, DTDs and related standards (<http://www.w3.org>). Notwithstanding the reference to DTDs to define the structure of XML documents, it should be understood that other specifications, methodologies, systems, protocols, or schemes could define the structure of markup languages.

[0096] Applications are not putting options in for a major embedded section of character text

[0097] There is no suggestion or teaching that references or presents a serried of combined ISO/IEC/W3C standards, specifically none placing digital signatures, notarizations, and self-containment inside digital graphic images.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 16

[0098] Unobvious was the suggestion to combine the character text and graphic elements. There were prior suggestions for metadata or a comment, but the idea of internally supporting simple or rich text, markup or system command language or further other encoded random data has not come to light, let alone auto processed, digitally signed or digitally witnessed data.

## BRIEF SUMMARY OF THE INVENTION

[0099] Taught within is the development of an electronic document in response to the present state of the art, and in particular, in response to the problems and needs in the art that have not yet been fully solved. Accordingly, the embodiments presented within teach various possible solutions using an electronic document apparatus. Described herein, the apparatus shows to accompany variously different information handling requirements of exchange, commerce and trade. Offered with the electronic document apparatus is security and independence in its process, method, and manufacture, offering a system for the secure independent electronic document operation.

[0100] Providing an inert container for an electronic document having advanced security features, particularly those allowing complete system control of said container, doing so with a selected set of parties, and no more. Independence is further extended with verification abilities, allowing original vendors to verify the container and its contents.

[0101] Interrelated security with in document secures document further. Each interface could support characterization of the other, and interact to bind data of both format types.

[0102] Digital signatures, let alone XML has not been presented as something that should heavily populate a comment field, making an image container become a secure document.

[0103] The use of the electronic document using embedded enhanced XML protocols has not been discussed nor realized, and further, repeated missed signification realizations with focus diverted elsewhere shows lack of advantage realization.

[0104] The only link that best made sense was the text super imposed into the graphic format.

[0105] Any mention of items embedded are for descriptive or metadata purposes.

[0106] The main 'things' had come to frustration. It was that a mix of the two, preferably in the course of 'into one document'. Due to its advantages, the building of the electronic document would have transpired by this time.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 18

[0107] The problem with securities assets transfer required solid positive control of container for such assets. Not until now has there been a container with enhanced security containing both automated data and visual presentation.

[0108] Standards are designed for voluntary use and do not impose any regulations. However, laws and regulations may refer to certain standards and make compliance with them compulsory. For example, the physical characteristics and format of credit cards is set out in standard number BS EN ISO/IEC 7810:1996. Adhering to this standard means that the cards can be used worldwide. [0000] Any standard is a collective work. Committees of manufacturers, users, research organizations, government departments and consumers work together to draw up standards that evolve to meet the demands of society and technology. British Standards' staffs act as secretaries to these committees and project manage the production of standards. As the world's oldest National Standards Body, BSI British Standards has over 100 years' experience of bringing together these often very varied viewpoints and of facilitating consensus.

[0109] A person skilled in a variety of art areas will become aware of how these established channels of protocol can become a solution for a spectrum of generically accepted possibilities of digital electronic commerce processing.

[0110] For the every day person, a picture identifies an item, and with a simple character data-interfacing environment, becomes a document that works for many purposes.

[0111] Outer wrapper gets the security container award.

[0112] Further, inert, free of platform and vendor requirements, you could do it!

[0113] The enhanced security, auto processing, cut and paste, and principle human interaction is a unique combination of features related to the electronic document.

[0114] Several steps in regards to XML and digital signatures, as well as the incorporation of the finalized secured data section into the image container requires several stages of steps in order to generate an electronic document of its type.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 19

[0115] The commercial value of the electronic power of attorney relates to many aspects of information, data or other valued managed asset relates to the value of the item itself. Having the capability to support security measures that, when in place, can ensure transactions are done correctly and in form that is verifiable and authenticable then ensures the asset is secure. With this, the value then becomes that of the monetary or other financial worth of the asset itself.

[0116] Included is optional 'receipt' possibilities, where the document's contents and a show of service or directed process is created.

[0117] Multiple embodiments are presented within, and in their accordance, an electronic document apparatus, method, system and its manufacture is presented, teaching a solution for secure independent digital electronic commerce and trade.. Said embodiments allow 'Electronic Commerce and Trade' to be secure and vendor independent. Within each embodiment's system, an apparatus can be manufactured using the method described therein. The electronic documents are proven in process, allowing immediate implementation and use, in similar to that of presented embodiments. An electronic document handling digital signatures, graphic representation, data automation all within an unalterable, verifiable, secure container is explained.

[0118] Use of what's described allows freedom in the commerce world, removal of vendor dependencies, and compliance with standard structure. Therefore, in accordance with the inscribed description, objects, features, drawings and advantages, simple electronic commerce transactions can be executed with proven, well established standard information exchange specifications and recommendations, and can become an asset!?.

[0119] Emca International (Emca) is an international, private (membership-based) non-profit standards organization for information and communication systems. It acquired its name in 1994 European Computer Manufactures Association (EMCA) Geneva, 1961, To standardize systems.

[0120] Mentioned here are a few outstanding embodiments in their 'functional form' wording.

[0121] Document encryption can either be on character data, before any base 64, or on the image data, having image data encrypted/scrambled before image section creation.

[0122] The eXtensible Markup Language (XML) can be used to facilitate implementation of integrated programmable World Wide Web ("Web") based services. Through the exchange of XML-related messages, services can describe their capabilities and allow other services, applications or devices to easily invoke those capabilities. The Simple Object Access Protocol (SOAP) has been developed to further this goal. SOAP is an XML-based mechanism that bridges different object models over the Internet and provides an *open* mechanism for Web services to communicate with one another.

[0123] XML provides a format for describing structured data, and is a markup language that is similar in form to Hyper Text Markup Language (HTML) in that it is a tag-based language. Unlike HTML, however, XML tags are not predefined, permitting greater flexibility than possible with HTML. By providing a facility to define tags and the structural relationship between tags, XML supports the creation of richly structured Web documents.

[0124] The XML standard describes a class of data objects called XML documents and partially describes the behavior of computer programs which process them. XML documents are made up of storage units called entities, which contain either parsed or unparsed data. Parsed data is made up of characters, some of which form character data, and some of which form markup. Markup encodes a description of the document's storage layout and logical structure. XML provides a mechanism to impose constraints on the storage layout and logical structure.

[0125] XML "elements" are structural constructs that include a start tag, an end or close tag, and the information or content that is contained between the tags. A "start tag" is formatted as "<tagname>" and an "end tag" is formatted as "</tagname>".

[0126] In an XML document, start and end tags can be nested within other start and end tags. All elements that occur within a particular element have their start and end tags occur before the end tag of that particular element. This defines a tree-like structure. Each element forms a node in this tree, and

potentially has "child" or "branch" nodes. The child nodes represent any XML elements that occur between the start and end tags of the "parent" node.

[0127] One exemplary usage of XML is the exchange of data between different entities, such as client and server computers, in the form of requests and responses. A client might generate a request for information or a request for a certain server action, and a server might generate a response to the client that contains the information or confirms whether the certain action has been performed. The contents of these requests and responses are in the form of XML documents, i.e., sequences of characters that comply with the specification of XML.

[0128] [TITLE] The XML Signature Recommendation (*XML-Signature Syntax and Processing*) defines standard means for specifying information content to be digitally signed, including the ability to select a portion of an XML document to be signed using an XPath transform. [w3c digsig abstract] A specification located at <http://www.w3.org/TR/xmlsig-core/> teaches the current version of the XML digital signature processing rules and syntax.

[0129] XML Signatures provide data *integrity*, message and/or signer authentication services for data of any type, whether located within the XML that includes the signature or elsewhere.

[0130] The SOAP specification defines a uniform way of passing XML-encoded data. It also defines a way to perform remote procedure calls (RPCs) using HTTP as the underlying communication protocol.

[0131] A SOAP message is an XML document that includes a mandatory SOAP envelope, an optional SOAP Header, and a mandatory SOAP Body. SOAP provides a protocol specification for invoking methods on servers, services, components and objects. SOAP codifies the existing practice of using XML and HTTP as a method invocation mechanism. The SOAP specification mandates a small number of HTTP headers that facilitate firewall/proxy filtering. The SOAP specification also mandates an XML vocabulary that is used for representing method parameters, return values, and exceptions.

[0132] SOAP provides an *open*, extensible way for applications to communicate using XML-based messages over the Web, regardless of what operating system, object model or language particular applications may use. SOAP facilitates universal communication by defining a simple, extensible message format in standard XML and thereby providing a way to send that XML message over HTTP.

[0133] Reference throughout this specification to features, advantages, or similar language does not imply that all of the features and advantages that may be realized with the present invention should be or are in any single embodiment of the invention. Rather, language referring to the features and advantages is understood to mean that a specific feature, advantage, or characteristic described in connection with an embodiment is included in at least one embodiment of the present invention. Thus, discussion of the features and advantages, and similar language, throughout this specification may, but do not necessarily, refer to the same embodiment.

[0134] Furthermore, the described features, advantages, and characteristics of the invention may be combined in any suitable manner in one or more embodiments. One skilled in the relevant art will recognize that the invention can be practiced without one or more of the specific features or advantages of a particular embodiment. In other instances, additional features and advantages may be recognized in certain embodiments that may not be present in all embodiments of the invention.

## BRIEF DESCRIPTION OF THE DRAWINGS

[0135] In order for the advantages of the invention to be readily understood, a more particular description of the invention briefly described above will be rendered by reference to specific embodiments that are illustrated in the appended drawings. Understanding that these drawings depict only typical embodiments of the invention and are not therefore to be considered to be limiting of its scope, the invention will be described and explained with additional specificity and detail through the use of the accompanying drawings, in which:

[0136] For a more complete understanding of the present invention, reference is now made to the following descriptions taken in conjunction with the accompanying drawings, in which:

[0137] Listed are drawings that in no way limit the possibilities of the apparatus.

[0138] FIGS. 1A through 1E are block diagrams illustrating an embodiment. FIG 1A is a block diagram of one embodiment in accordance with the present invention. FIGS 1B through 1E are block diagrams of sections within the embodiment.

[0139] FIG 2 is a schematic diagram illustrating some of the types of files, if any, that may be enveloped within an embodiment.

[0140] For the purposes of promoting an understanding of the principles of the invention, reference will now be made to the exemplary embodiments illustrated in the drawings, and specific language will be used to describe the same. It will nevertheless be understood that no limitation of the scope of the invention is thereby intended. Any alterations and further modifications of the inventive features illustrated herein, and any additional applications of the principles of the invention as illustrated herein, which would occur to one skilled in the relevant art and having possession of this disclosure, are to be considered within the scope of the invention.

[0141] Reference throughout this specification to "one embodiment," "an embodiment," or similar language means that a particular feature, structure, or characteristic described in connection with the embodiment is included in at least one embodiment of the present invention. Thus, appearances of the

phrases "one embodiment," "an embodiment," and similar language throughout this specification may, but do not necessarily, all refer to the same embodiment, different embodiments, or component parts of the same or different illustrated invention. Additionally, reference to the wording "an embodiment," or the like, for two or more features, elements, etc. does not mean that the features are related, dissimilar, the same, etc. The use of the term "an embodiment," or similar wording, is merely a convenient phrase to indicate optional features, which may or may not be part of the invention as claimed.

[0142] Each statement of an embodiment is to be considered independent of any other statement of an embodiment despite any use of similar or identical language characterizing each embodiment. Therefore, where one embodiment is identified as "another embodiment," the identified embodiment is independent of any other embodiments characterized by the language "another embodiment." The independent embodiments are considered to be able to be combined in whole or in part one with another as the claims and/or art may direct, either directly or indirectly, implicitly or explicitly.

[0143] Finally, the fact that the wording "an embodiment," or the like, does not appear at the beginning of every sentence in the specification, such as is the practice of some practitioners, is merely a convenience for the reader's clarity. However, it is the intention of this application to incorporate by reference the phrasing "an embodiment," and the like, at the beginning of every sentence herein where logically possible and appropriate.

[0144] As used herein, "comprising," "including," "containing," "is, are," "characterized by," and grammatical equivalents thereof are inclusive or open-ended terms that do not exclude additional unrecited elements or method steps. "Comprising" is to be interpreted as including the more restrictive terms "consisting of" and "consisting essentially of."

[0145] As used herein, "graphic file", "image file", "image", "graphical data", "graphical image", "WMP", "JPG", "BMP", "PNG", "JPG", "TIFF", "GIF", "JIF", "JNG", SVG, and RTF includes any type of a visually graphic humanly perceivable medium or image based data.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 25

[0146] As used herein, "standards group", "ISO", "IEC", "W3C" includes any normative group or organization.

[0147] As used herein, "data", "binary data", "raw data" includes data of a generic binary type.

[0148] As used herein, "byte", "character" includes a sequence of 8 adjacent bits; which are operated on as a unit by a computer, and represents an integer from 0 to 255.

[0149] As used herein, "character text", "character data" includes single, double, or multiple byte characters.

[0150] As used herein, "base64", "shrunk", includes the character representation of data in a form any of the ISO W3C ect standards.

[0151] As used herein, "block" continuous, or set amount of continues raw, binary, character text, random byte or other type of data.

[0152] As used herein, "graphic data", "image data", "pixel data" includes any series of visually representative data.

[0153] "Digital signature", "Signtaure", "Notarization", "Digital Notarization", "Cosign", "Countersign", "XML DigSig", "XML Digital Signatures" includes any digital signature data.

[0154] "Envelope", "enveloping signature", "enveloped data" all reference the encompassment of a signature section or block of structured or non-structured data character(s).

[0155] "Raw", "raw data Block", "part of data", "data section", or "blob" means a section of data that is indiscriminant of its type, size, sign or other aspect or attribute of raw

[0156] As used herein, "standards" Standards - Put at its simplest, a standard is an agreed, repeatable way of doing something. It is a published document that contains a technical specification or other precise criteria designed to be used consistently as a rule, guideline, or definition. Standards help to make life simpler and to increase the reliability and the effectiveness of many goods and services we

use. Bringing together the experience and expertise of all interested parties such as the producers, sellers, buyers, users and regulators of a particular material, product, process or service creates standards.

[0157] As used herein, “URL” is Universal Resource Locator.

#### DETAILED DESCRIPTION—FIRST EMBODIMENT—FIGS. 1

[0158] In the following description, for the purpose of explanation, numerous details are set forth, such as diagrams, file types, and arrangements, in order to provide an understanding of one or more embodiments of the present invention. However, it is and will be apparent to one skilled in the art that these specific details are not required in order to practice the present invention.

[0159] Certain embodiments of the securable independent electronic document may be constructed in the following fashion if desired. A text file and a graphics file may be opened simultaneously. Zero or more user files may be embedded into the text file. Security features such as checksums may then be computed on all and / or parts of the text file. The graphics file process may compute checksums or other security features on all and / or parts of the text file and / or all or parts of any embedded user files. The graphics file processing can be made to in essence to take one or more pictures of a visual representation of the text file and its embedded data and therefore these checksums and security features could vary from the security features computed by the text file process. The text file process and the graphics file process may then exchange and write the other process's security feature into its file. Both processes may then each engage in additional processing such as encryption and then compute and write another security feature perhaps by a different method than the prior checksum if desired. This procedure of security feature computation, security feature exchange and save of the other processes' security feature, and re-computation and save of a new security feature may then continue or both the text file and the graphics file may then close. Subsequent inspection of the security features, if allowed by the securable independent electronic document creator, could attest to tamper evidence in either or both of the text file or graphics file portions. Additionally, if allowed by the securable independent electronic document creator, visual validation may be available in either or both the text file and graphics file portions. A human and/or an OCR, or other type of pattern

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 27

recognition software may make this visual check.

[0160] One embodiment as illustrated in **FIG 1A 100** has any User File **130** or none at all inside a [XML] markup file **120** and **140** enveloped by a [PNG] graphics file **110** and **150**. In **FIGS 1A** through **1E**, XML and PNG are shown as the markup and graphics files respectively, although in certain embodiments, other choices may exist for both. Either or both the [XML] markup file and the [PNG] graphics file may have intrinsic security features [CRC's]. As an example, **FIG 1F** shows a typical arrangement of a PNG data block or chunk with some data elements **191** through **195** and the security feature **196** at the end of the chunk. In the case of the PNG format, the data security feature takes the form of a cyclic redundancy check or CRC computed on the contents of that data chunk. In this and other file formats, other kinds, numbers, and placements of intrinsic and constructed security features may occur. Naturally, it is appreciated that variations are possible and considered within the scope of the example and embodiments.

[0161] In certain embodiments, either or both the [XML] markup file and the [PNG] graphics file may include zero or more Digital Signatures and / or Counter-Signatures of various forms. **FIGS 1B** and **1C** show as an example, typical PNG file header and file end sections respectively. In the case of the PNG file format, the structure of the file is quite flexible with regards to occurrence, number, and arrangement of data blocks or chunks after the IHDR chunk **FIG 1B.111** and before the IEND chunk **FIG 1C.159**. Continuation with an example of a use of the PNG file format in an embodiment, the markup language file and user file component, if any user files are included at all, may be inserted in zero or more Ztxt chunks **FIG 1B.113** and / or **FIG 1C.155**; and / or zero or more tEXT chunks **FIG 1B.114** and / or **FIG 1C.153**; and / or zero or more iTXT chunks **FIG 1B.115** and / or **FIG 1C.154**; and / or zero or more IDAT chunks **FIG 1B.117** and / or **FIG 1C.151**; and / or zero or more Other Sections **FIG 1B.116** and / or **FIG 1C.152**. In various embodiments, Digital Signatures **FIG 1B.112** may be added before the included data. In other embodiments, Digital Signatures **FIG 1C.156** may be added near the end of the graphics file. Still other embodiments may have Digital Signatures **FIG 1B.112** and **FIG 1C.156** both before and after the included file or no Digital Signatures at all in the graphics file portion.

[0162] Embodiments may also possess Digital Signatures in the markup file portion. As an example, in XML markup language, the World Wide Web Consortium (W3C) is just one organization that proposes and maintains standards and routines regarding Digital Signatures. Notarization elements and or files may also be included as appropriate.

[0163] The PNG file structure permits the inclusion **FIG 1B.113-116** and **FIG 1C.152-155** of several types of text data blocks or chunks and other optional types of data chunks in a file. Many of these kinds of data chunks are quite flexible as to what is precisely put into them. Various embodiments could place into these chunks information concerning advanced security features, encryption, digital rights, and / or other uses. In an example of a use of the PNG specification as the graphics file in an embodiment, the **FIG 1B.117** and **FIG 1C.151** IDAT chunks could also carry information concerning advanced security features, encryption, digital rights, and / or other uses as well. Furthermore, an embodiment that uses the PNG specification may also contain user created chunks fabricated within the rules of the specification for the purposes of advanced security, encryption, digital rights, and / or other uses as well as the pre-described chunk types.

[0164] Either or both the [XML] markup file and the [PNG] graphics file may include zero or more Optional Data Block[s] for any combination of the purposes of Advanced Security, Encryption[s], Rights, or other uses. Also, zero or more Notarizations and / or Counter-Signatures may be included. The file creator may retain, 3rd party archive, transmit, and or post the security feature[s], Digital Signatures, and Optional Data Block[s] as required. Notaries / Counter-Signers may retain, 3rd party archive, transmit, and or post as required. The embodiment receiver may check the security features [CRC's] and Digital Signatures, Notarizations, and Counter-Signatures as required. The embodiment receiver and intermediate handlers access the Optional Data Block[s] as required by the embodiment creator.

[0165] The markup file may also contain **FIG 1D.122** and **FIG 1E.141** optional sections and / or files. An embodiment could use these data to support any combination of advanced security, encryption, digital rights, non-repudiation (e.g., evidencing that a document was signed by a particular entity at a particular date and time), field validation (e.g., checking that information in a document complies with content category rules), and / or other uses as appropriate. In the case of the XML, the W3C maintains

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 30

routines to convert 8 bit data to 6 bit data and the inverse conversion 6 bit to 8 bit data with no losses of bits. These conversion routines may facilitate the inclusion of files within the markup portion of an embodiment although other conversion routines may be appropriate for certain applications.

[0166] When an originator has completed a securable independent electronic document, they may have access to several kinds of information they included and, perhaps, beyond what they put in. For their particular instance of an embodiment, there may exist zero or more files, CRCs', basic and / or advanced security features, encryption data, digital rights, digital signatures, notarizations, and other data.

[0167] FIG X and Xa show an electronic document using some of the combinations above. For instance, with the Power of Attorney electronic document shown in Fig X. the securable independent electronic document 100 has the graph 80, the text section 5, and data populating

[0168] In certain embodiments, it may appropriate for the originator to have access to none, some, or all of this information. They then may choose to retain, post, transmit to the receiver or third parties whatever portion of that information is reasonable or required. The receiver of a securable independent electronic document may have access to none, some, or all of the information about it or within it also. If reasonable or desired in certain embodiments, the receiver may verify information within and / or about a securable independent electronic document to check for evidence of tampering, validity, and other qualities. Embodiments may also permit one or more third parties to attest to the veracity of a securable independent electronic document.

[0169] Embodiments may be constructed that include an electronic representation of a legal document such as a bond, surety coupon, mortgage, or other legal document. The electronic document creator may then include one or more digital signatures in the markup language portion in accordance with guidelines set forth by the W3C XML digital signature recommendation of June 10, 2008 and / or other methods. It may be reasonably concluded that the markup language portion of a securable independent electronic document construction thus far conforms to often adopted standards and is within the scope of legal rules and regulation such as the UETA statute.

[0170] Intermediate participants such as witnesses, co-signers, counter-signers, notaries, authorizing / approving parties, and others may need only to conform to their requirements within rules and regulation to maintain the legal operability of the included legal document within a securable independent electronic document construct markup language file portion. In certain applications, when the outer graphics file portion of a securable independent electronic document construct readies to envelope the inner markup language file portion with its included document, additional steps may be taken.

[0171] It may be desirable to make any number of pictorial representations of the included document and / or its markup language component in part and / or in its entirety, which may be saved within the outer graphics file portion of a securable independent electronic document. Additional security features may also be computed on the whole or multiple parts of the inner markup language portion with the included document, which enhances the tamper evidence qualities of a securable independent electronic document.

[0172] Embodiments may be constructed having one or more securable independent electronic documents inside a securable independent electronic document. Other regular files may also be interspersed with securable independent electronic document's inside the outermost securable independent electronic document. Embedded securable independent electronic document's may also envelope further embedded securable independent electronic document's and other files. Embodiments may choose to work on the included document and its securable independent electronic document envelope in a easily readable plain-text form. An electronic document creator may construct a securable independent electronic document and then encrypt in its entirety. Information about the encryption may be stored in a second securable independent electronic document that may also contain the entire encrypted securable independent electronic document, some piece of it, or none at all. Encryption information, the encrypted whole or fragmented securable independent electronic document, which may also be inside other securable independent electronic document's, may then take separate routes to the electronic document receiver. The electronic document receiver may then decrypt and / or reconstruct all or part of the originally encrypted securable independent electronic document as appropriate.

## CONCLUSION, RAMIFICATIONS, AND SCOPE

[0173] Advantageously, the securable independent electronic document offers document creators, handlers, and recipients more opportunity and flexibility in selecting tools for data integrity, data security, data validation, data auditing, and support for other mission critical data processing needs.

[0174] The securable independent electronic document users are given the opportunity to create and / or acquire their own tools for document data processing operations. The above-mentioned tools are not necessarily limited in their scope of operation.

[0175] The document creators may be able to choose the level of interaction with outside third parties in document creation and handling.

[0176] The securable independent electronic document may be transmitted simply, such as an attachment to an email; and may be handled with tools common to the browser environment.

[0177] The signature block that contains a section for dynamic data, which is user data or other XML formatted type, including base64 MIME type of encoded data, which allows any random raw binary or character data to be inserted inside the signature block and therefore become candidate for digitally signing. Further, reference to an external object data block can be made, which therefore then includes the referenced material when the digital signature digest value is computed, even though the signed material may be outside the electronic document container.

[0178] Digital signatures can be presented in multiple forms. Adjacent, cosignatures or nested signatures enhance data integrity.

[0179] Digital signatures can be applied to both text and graphic image data sections. Multiple sections within a single text data section allow for digital signature operations to be done to both types of data sections.

[0180] Specific functionality on various types of graphic files allow for larger embedded sections. Further, additional types of data can be placed in the document, having other containment section

compartments supporting other various data models. Further, these compartments can contain further security measures, ensuring yet better containment validity, such as extended content digital signature capabilities.

[0181] The character portion of the container may contain a description of an image, in a graphic section. A graphic section can also contain an image of text, security features, encryption keys, access methods and rights, or other data. A graphic section can contain an interpreted key for a XML section. Example: A picture of a zebra could be coded image='ZEBRA', or other codeword, as well as 'embedded' values, such as a key chain. Either can be first to be created, having support by the other accordingly. In the case of creating the text first, the graphic can contain information (in graphic form), supporting original text information. Later, the text can then finish up with data supporting the graphical equivalent of the original text data to be protected.

[0182] Automated data, graphical data, and a host of other data types work to make the document securable. For example, a code word on the phone could go with a picture and be input to the automated processed text.

[0183] A wide variety of well-adopted applications already support the document.

[0184] Various encryption, security methods, or other technologies in existence, or possibly created in the future, may be implemented in the securable document container. This allows a flexible set of circumstances for enhanced document integrity.

[0185] Multiple page documents can be presented as a series of electronic documents, having the electronic document's contents independent of any header or ending container portions.

[0186] Image sections of the electronic document, its embedded documents or a combination of documents could be combined to present one totality picture. The data for these could be combined or otherwise accumulated accordingly to present a completed pictorial of the overall data environment.

[0187] Self type embedded documents support process flow and management.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 34

[0188] Digital signatures use XML. The graphic image container PNG can support content digital signatures, which, with a specified data set, can present signatures further preserving data integrity.

[0189] Self type embedded documents support process flow and management.

[0190] Notarization or witnessing type of either acknowledgement or Juret based can be part of the document and would follow laws, statutes or other regulations in place to support commerce for a digital transaction. These laws have been in place since early 2000 for most states, having uniform acceptance to these laws commonly in place now.

[0191] Its copy is its original, having both the data and visual support included in a single container package.

[0192] Document is in its best archival state and requires no further processing for indefinite storage and retrieval needs.

[0193] Vendor verification allows for private 'in house' vendor specific trade secret secure, reliable confirmation. (Tumblers placed internally known only to internal processes, generating a result whose algorithmic generation is completely contained in vendors' control.

[0194] With this single container, and the bounds of data limitless, the extra protection sought became more and more. Soon, security possibilities evolved. Usable features become to exist.

[0195] Although the description above contains many specificities, these should not be construed as limiting the scope of the embodiments but as merely providing illustrations of some of the presently preferred embodiments. For example, the document can have other purposes, such as , ect.

[0196] Thus, the scope of the embodiments should be determined by the appended claims and their legal equivalents, rather than by the examples given,

[0197] It is understood that the above-described embodiments are only illustrative of the application of the principles of the present ELECTRONIC DOCUMENT apparatus taught within. The electronic

document may be embodied in other specific forms without departing from its spirit or essential characteristics. The described embodiments are to be considered in all respects only as illustrative and not restrictive. The scope of the document apparatus is, therefore, indicated by the appended claims rather than by the foregoing descriptions. All changes, which come within the meaning and range of equivalency of the claims, are to be embraced within their scope.

[0198] Similarly, one skilled in the art would appreciate a postable resume complete with structured information concerning employment and other tangible data items that would be relative to an applicant's qualifications.

[0199] As another example, it is envisioned that the electronic document could be that of an issued patent, or published application, having tangible data represented for automation means of cataloging or other reference. Alternately, correspondence could include control structure information supporting the office type actions and / or replies.

[0200] It is also envisioned a graphic image can present a picture that contains a required process or step. The character text could include validation or authentication text, which can include English type instructions, which describe the format of the data originally placed, or otherwise represented in the graphic form.

[0201] It is expected that there could be numerous variations of the design of this invention. For example, the graphic component may consist of colors, shapes, and other visual data. Further, the character text can incorporate multiple embedded documents, digital signature blocks, or other embedded and / or encoded data in any combination.

[0202] It is also expected that another design variation of the document would be an embodiment where there may be a receipt attached to the document, using self document type embedding, where an original order or other request is encompassed inside the receipt when the order or other request is fulfilled.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 36

[0203] It is envisioned that the components of the electronic document and method may be constructed with a variety of information. For example, the character text component can included scripting, command language, or other digital represented formats. Further, its graphical component could include barcodes, object character recognition formatted data, as well as visually confirming data.

[0204] It is also to be realized that the components of the electronic document may be constructed of a variety of processes. In addition, component steps can be separated, each creating separate documents, and finally assembled together.

[0205] Finally, it is envisioned that the components of the electronic document may be constructed of a variety of procedures. For example, its creation could be in a controlled processing environment, with procedures creating individual sections of the document before final construction.

[0206] Thus, while the present invention has been fully described above, with particularity and detail in connection with what is presently deemed to be the most practical and preferred embodiment of the invention, it will be apparent to those of ordinary skill in the art that numerous modifications. Including, but not limited to, variations in size, materials, shape, form, function and manner of operation, assembly and use may be made, without departing from the principles and concepts of the invention as set forth in the claims.

~~[0207] Thus, while the present invention has been fully described above with particularity and detail in connection with what is presently deemed to be the most practical and preferred embodiment of the invention, it will be apparent to those of ordinary skill in the art that numerous modifications, including, but not limited to, variations in size, materials, shape, form, function and manner of operation, assembly and use may be made, without departing from the principles and concepts of the invention as set forth in the claims.~~

That which is claimed is:

1. An information handling apparatus comprising, said information handling apparatus consisting of:

a container, adapted for a plurality of data types of sectional components, said container can be of a normative standard format; sectional components' comprising:

at least one character data component, comprising:

wherein when said data component is comprised of a character text data type, said component comprises:

a character text data, wherein said character text data can be of a normative standard format; coupled to:

a first interfacing means, wherein said character text data can be processed in an automated fashion in a computer system;

a second interfacing means, wherein said character text data can comprises text characters, said characters are able to be interpreted and understood with human interaction;

a first referencing means, wherein said character text data can reference external file data a file using a uniform resource locator or identifier;

a first encoding means, wherein said character text data can be of an encoded type;

← Fo

← Fo

← Fo

a first embedding means, wherein said character text data  
~~can be of said encoded type format and can contain file~~filed  
data of any type; including that of said apparatus container.  
and

a first integrity means, wherein said character text data can  
be of an encrypted format; and

at least one ~~graphical image~~additional sectional data component;  
~~comprising selected from a plurality of data types.~~

wherein when said data component is comprised of a graphical  
image data type. said component comprises:

a graphical image data ~~component;~~ said graphical image  
data coupled to:

a third interfacing means, wherein said graphical image  
data can be digitally processed in an automated fashion in a  
computer graphic processing system;

a fourth interfacing means, wherein said graphical image  
data can be realized and perceived with human interaction;   
and

a second integrity means, wherein said graphical image  
data can be of an encrypted type;

~~at least one overall data integrity check value;~~

said sectional component container coupled to:

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 39

a fifth interfacing means, wherein said ~~containers~~ container's ~~binary file data format is of a binary type;~~ allows direct, non-altered, single byte precision, original 'incrementally-filed' data handling and storage.

a first independence means, wherein said ~~containers~~ container's ~~sectional components~~ component's creation, processing or storage can be independent of said ~~containers~~ container's ~~contents~~ creation;

a third integrity means, wherein said ~~containers~~ container's ~~sectional components~~ component's creation, processing or storage can be independent of ~~an~~ from ~~intervention~~ from ~~of~~ said ~~containers~~ container's ~~association~~;

a fourth integrity means, wherein said ~~containers~~ container's ~~sectional component(s)~~ coupled to other said container's sectional components(s) can ~~included~~ include ~~data integrity check value information of said other said container~~ container's sectional components; component(s).

a fifth integrity means, wherein ~~having said containers~~ container's ~~format be of a normative standard type further allows said containers~~ container's ~~creation, processing and/or storage to be independent of an~~ intervention ~~from additional party association~~;

a second independence means, wherein ~~having said containers~~ container's ~~format be of a normative standard type further allows said containers~~ container's ~~creation, processing and/or storage to be independent of an additional required party or parties' interaction~~;

a third independence means, wherein ~~having said containers~~ container's ~~format be of a normative standard type further allows said~~

~~containers~~container's validation to be independent of an additional party  
or parties' interaction; and

a fourth independence means, wherein having ~~said container have~~  
a container's format of a normative standard type further allows said  
~~container~~container's creation, processing and/or storage to be created,  
~~processed or stored independent of a computer system~~computing platform  
medium-type.

2. The information handling apparatus of Claim 1, having said character text data component further comprising:

at least one character text digital signature data section(s), said character text digital signature data section(s) coupled to:

a first digital signing means, wherein said character text data can be digitally signed, co-signed and countersigned; digital signature data section type can be at least one of the following: (i) signature; (ii) co-signature; (iii) counter-signature.

3. The information handling apparatus of Claim 2, having said container further comprising:

at least one or more digital signature data components; component, said digital signature data component comprising:

at least one digital signature data section, said digital signature data coupled to:

a subsequent digital signing means, wherein said digital signature component data type can be at least one of the following: (i) signature, co-signature and countersigner type; (ii) co-signature; (iii) counter-signature.

4. The information handling apparatus of Claim 3, having said ~~container~~container's component sections further comprising:

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 41

at least one hash check value, wherein said hash check value is computed for the said component section.

Patent Application of John Lewis Guymon Jr for  
"Securable Independent Electronic Document"  
Page 42

ABSTRACT:

~~{0208}~~ In accordance with embodiments within, a ~~secure~~ securable independent electronic document apparatus, ~~it's system, method, and manufacture~~ is taught. With an authenticable and tamper detectable electronic container, elements and sections supporting platform, vendor and authentication independence, character-text data sections and elements supporting, if user desired, digital signatures, data automation and nested embedding, as well as graphical image data, and/or other free format types of data elements and sections supporting manyperceptual integrity and authenticity verification, and/or other free formatted data elements and sections supporting a plurality of types of data processing operations, and, if user desired, imaging representation comprised within a container using a ~~secure~~ securable and independent system, the secure. The securable independent electronic document apparatus presents a solutionsolutions for digital the personal unique and interwoven creation and enhancement of user and document security and confidence in electronic information data information's digital distribution, commerce, trade, publishing and/or exchange.

**Cover Letter – First Office Action – Applicant’s Reply Correspondence**

December 13, 2012

Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

Sir/ Madam:

Applicant presents this letter of cover and explanation for the enclosed contents comprising Applicant’s response to the USPTO’s ‘Notice of Non-Compliant Amendment’ communication, dated (mailed) November 27, 2012 in regard to Applicant’s amendment reply mailed September 6, 2012, having said amendment in reply to the USPTO’s Office Action dated March 6, 2012.

Applicant answers USPTO’s ‘Notice of Non-Compliant Amendment’ communication with the supply of a correctly page numbered reply. No changes were made from the original September 6, 2012 reply.

This correspondence includes:

|                        |            |                                              |
|------------------------|------------|----------------------------------------------|
| Amendments reply       | (18 pages) | (Original 9/6/12 reply w/correct page count) |
| Amended application    | (39 pages) | (Original 9/6/12 amendment)                  |
| Changes Document       | (42 pages) | (Changes shown)                              |
| Information Disclosure | (11 pages) | (SB08, includes ‘Author’ information)        |

Thank you for your consideration and time with this return correspondence.

Very respectfully,

John Lewis Guymon Jr  
Tel: (801) 938-4833

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

The amendment document filed on 06 September 2012 is considered non-compliant because it has failed to meet the requirements of 37 CFR 1.121 or 1.4. In order for the amendment document to be compliant, correction of the following item(s) is required.

THE FOLLOWING MARKED (X) ITEM(S) CAUSE THE AMENDMENT DOCUMENT TO BE NON-COMPLIANT:

- 1. Amendments to the specification:
  - A. Amended paragraph(s) do not include markings.
  - B. New paragraph(s) should not be underlined.
  - C. Other \_\_\_\_\_.
- 2. Abstract:
  - A. Not presented on a separate sheet. 37 CFR 1.72.
  - B. Other \_\_\_\_\_.
- 3. Amendments to the drawings:
  - A. The drawings are not properly identified in the top margin as "Replacement Sheet," "New Sheet," or "Annotated Sheet" as required by 37 CFR 1.121(d).
  - B. The practice of submitting proposed drawing correction has been eliminated. Replacement drawings showing amended figures, without markings, in compliance with 37 CFR 1.84 are required.
  - C. Other \_\_\_\_\_.
- 4. Amendments to the claims:
  - A. A complete listing of all of the claims is not present.
  - B. The listing of claims does not include the text of all pending claims (including withdrawn claims)
  - C. Each claim has not been provided with the proper status identifier, and as such, the individual status of each claim cannot be identified. Note: the status of every claim must be indicated after its claim number by using one of the following status identifiers: (Original), (Currently amended), (Canceled), (Previously presented), (New), (Not entered), (Withdrawn) and (Withdrawn-currently amended).
  - D. The claims of this amendment paper have not been presented in ascending numerical order.
  - E. Other: \_\_\_\_\_.
- 5. Other (e.g., the amendment is unsigned or not signed in accordance with 37 CFR 1.4):  
See Continuation Sheet

For further explanation of the amendment format required by 37 CFR 1.121, see MPEP § 714.

TIME PERIODS FOR FILING A REPLY TO THIS NOTICE:

1. Applicant is given **no new time period** if the non-compliant amendment is an after-final amendment or an amendment filed after allowance. If applicant wishes to resubmit the non-compliant after-final amendment with corrections, the **entire corrected amendment** must be resubmitted.
2. Applicant is given **one month**, or thirty (30) days, whichever is longer, from the mail date of this notice to supply the correction, if the non-compliant amendment is one of the following: a preliminary amendment, a non-final amendment (including a submission for a request for continued examination (RCE) under 37 CFR 1.114), a supplemental amendment filed within a suspension period under 37 CFR 1.103(a) or (c), and an amendment filed in response to a *Quayle* action. If any of above boxes 1. to 4. are checked, the correction required is only the **corrected section** of the non-compliant amendment in compliance with 37 CFR 1.121.

**Extensions of time** are available under 37 CFR 1.136(a) only if the non-compliant amendment is a non-final amendment or an amendment filed in response to a *Quayle* action.

**Failure to timely respond** to this notice will result in:

**Abandonment** of the application if the non-compliant amendment is a non-final amendment or an amendment filed in response to a *Quayle* action; or

**Non-entry** of the amendment if the non-compliant amendment is a preliminary amendment or supplemental amendment.

**Amendments w/Reply in re Office Action of March 6, 2012**

~~August 30, 2012~~ (a) *Sept 4, 2012*

Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

Sir/ Madam:

In response to the Office Action dated (mailed) March 6, 2012, with extension of time that of three (3) months making reply date due on or before September 6<sup>th</sup>, 2012, Applicant hereby amends the Application of Patent, 12/316699, filed December 15, 2008 and remarks as follows:

**SPECIFICATION:**

By the above amendment, Applicant has amended the specification to emphasis the apparatus and its functionality and structure in support of the claims.

Amendment and printed and incorporated as separate document.

**CLAIMS:**

Amendment and printed and incorporated as separate document.

01/22/2012 560.00-09

**DRAWINGS:**

AMc0906f

Drawings not changed.

**REMARKS:**

In response to the Office Action dated March 6, 2012, Application presents the following remarks:

Applicant has rewritten the claims to define the electronic document apparatus more particularly and distinctly so as to overcome the technical objections raised in the Office Action United States Patent and Trademark Office, and define, over prior art, the ability for Patent of the Securable Independent Electronic Document apparatus.

In regard to the Office Action's section '*DETAILED ACTION*',  
paragraph 1, '*This Action ...*'

1. Applicant

paragraph 2, '*Claims 1-4 are ...*'

2. Applicant

In regard to the Office Action's section '*Information Disclosure Statement*',  
paragraph 3, '*Initialed and ...*'

3. Applicant ack 5 In dis statements filed, id filed 2008 thru 2012 Applicant includes with this first office action an amended In Dis SB07 to include further found and/or referenced patents or applications of patents.

In regard to the Office Action's section 'Claim Objections',

paragraph 4, 'Claims 1- ...'

4. Applicant has cleaned up several texts as suggested by examiner.

paragraph 5, 'Claim 1 is ...'

5. Applicant fixed 'd' on included word.

In regard to the Office Action's section '*Claim Rejection – 35 USC § 112*',  
paragraph 6, 'The following ...'

6. Applicant revised claims to better point out and distinctively claim the Securable Independent Electronic Document apparatus that is taught within Applicant's Application for Patent..

The claims, having the first an independent claim for an digital information processing apparatus, and distinctively points out said apparatus, its components, and its related means, said means operating independently and during different time periods during the apparatus's creation, use and distribution.

The claims, describing the Securable Independent Electronic Document apparatus, in accordance with MPEP S 2114, define the apparatus with its structure and included means; further, the apparatus, with the support and diligent search, and, as Applicant believes, true and correct information found thereof, as claimed and further described and taught in the specification, has structure different than that of the references cited, that of Referenced Prior Art, either during , and is so claimed having described

Further, and the specification of the Application for Patent,

paragraph 7, 'Claims 1-4 ...'

7. Applicant included amended structural relationships to describe the apparatus

paragraph 8, 'Furthermore, ...'

8. Applicant believes MPEP 2114, stating that the prior art differs in structure and therefore allows the claims within without anticipation by either Ginter or Doyle.

In regard to the Office Action's section '*Claim Rejection – 35 USC § 102*',  
paragraph 9, 'The following ...'

9. Applicant describes the differences between Ginter and DoYLES Systems and methods and that of the inscribed Securable Independent Electronic Document Apparatus.

paragraph 10, 'Claims 1- ...'

10. Applicant compares Ginter and Doyle to Securable Independent Electronic Document apparatus.

Both G and D have systems and/or methods that use particular software API's. The document described herein uses no set API or coding instruction but rather lets the user decide how and with what mechanics to build the document.

G sys lack versatility let alone 'self' doing caps.  
Includes options not wanted, has not some wanted.  
Software house is dependant to the workings of the ssthings.  
Ginter requyres trusted nodes that sincerely limit paths, ways operations or other 'circumvented' or otherwise 'the results ant path of the shipmwnt.

featured means, those of int, ind, dig,, and ??first allows the electronic document container described within to have structure, creation, security, independence overall functionality endless in possibilities, .

In Pt#, para 0117, Ginter describes a 'secure "virtual black box" ;The Virtual Distributive Environment 'VDE' , built using concepts of the Digibox container , uses the DigiBox container in conjunction with the Transit Key ???Systems 'TKS??' that are stored on different computer systems, these systems dependand on the overall VDE envioronment to handle or to move or otherwise work with the 'user data'.

G – his apparatus that contains one or more microprocessors a

Our apparatus is not a system wide thing as much as a tangible apparatus, made up of components, pieces. Put together, an electronic document, one which allows any system or method of information handing, processing and/or exchange to occur and be possible. With the increased security thru means such as those of integrity, independence, electronic commerce becomes as needed, truly secure. The apparatus allows user control of this, completely. No additional person or party ('third') is present.

Similar to a physical truss, such in patent '??' where rulings supported different combinations of items used to

5,920,861 Hall, et al.  
Appl No 08/805,804  
Filed Feb 25, 1997

Uses DigiBox tech

rights management environment in which DigiBox.TM. containers are used

Multiple containers for different uses – not user controlled

The node and container model described in 5920861 and in the Ginter et al. patent specification (along with similar other *DigiBox/VDE* (Virtual Distribution Environment) models)

The InterTrust *DigiBox* container model allows and facilitates these and other different container uses.

Uses rights control client (node )

As written before the 2002/0129241 Applicatoin

Written in 5,949,876 is VDE mention with DigiBox

Ginter, Karl L. ; et al.

Systems and methods for secure transaction management and electronic rights protection

InterTrust Technologies Corp.  
May 30, 2002

Secure Process  
Including metering, auditing, budgeting  
Uses control sets

No apparatus claim, written in some of the different versions of the '9241 titled patent contains claim to a single stand alone secure container.  
Only methods, program packages , or systems for supporting electronic commerce are claimed in the various Ginter patents or applications.

Encryption involved, as per Ginter though Decryption CONTROLLED

Req protected environments  
Their contracts, control sets

Requires a secure system.

Appliance claim comprises a processor, memory devices and other hardware items.

New kind of environment VDE [0011]. Composed of all electronic community members

Requires API and uses Rights Permissioning and Management Language RPML [0070] . RPML provides control over the taught invention. Requires certain subsystems for further needs.  
Creates a 'virtual black box' [0117]. Comprised of nodes, content creators, content providers and others for the environment.

[0134] VDE uses SPU's, software substitutes, HPE's, secure communications, systems integrated software, control information to achieve the electronic contract/rights protection environment of the present invention.

G-Their containers move thru this VDE environment. Containers are not user integratable for the most part. Control and other usage information is not inside the original document.

D-Just provide a certificate showing/documenting 'state' of document, allowing tampering detection.

Encryption is based on their choice [0136]

Important mechanisms for enforcement of agreements and protection is provided by VDE, and is not user creatable. [0138]

We The users of the apparatus build their own enforced confidence.

Rely on VDE for confidential purposes. [0139]

Uses proprietary based software. Both G and D build the software and are forever dependant upon for its operation and upkeep. [0141]

Security is their choice, and is based on a small set of things and not an 'open' array of user possible choices. [0142]

API's [0150]

Uses/Requires the Rights Operating System [0160]

We can be a simple document sent anywhere, secure or not, having our security within and delivery open to all channels.

G-Requires this trusted network. [0167]

Security is primarily dependant on concealment of VDE and related storage activities. [0169]

[0172] allows remote control of environment.

Software applications exist for environment, its modules and methods. [0195]

[0196] support user interaction through: (a) "Pop-Up" applications /

VDE user control information and services are seamlessly integrated into such software and can be directly accessed by a user integrated into the commercial software's native design.

[0199] uses secure chains for content trust. Embedding is based on contents in VDE containers or the moment of such content into other containers.

Requires VDE overhead. [0230]

Requires a secure subsystem. [0241]

[0284] Secure Processing Units

[0285] Uses database for storage of intermediate document container handling data items.

[0286] A hardware SPU (rather than a software emulation) within a VDE node is necessary if a highly trusted environment is required. S

[0300] "Rights Operating System" ("ROS") architecture provided by the Virtual Distribution Environment;

The logical 'simple' container contains many private data items not under users control.

[0311] FIG. 17

[0656] Environment required ROS, HPE, SPE's, API's.

Employing so much extra to move data from a to b.

[0893] The Secure Database Services Manager ("SDSM")  
Secure Database Manager RSI

[0916] The container manager registers information within secure database

[2349] Example--"Virtual Silicon Container"

[2350] VDE provides a "virtual silicon container" ("virtual black box") in that several overall secure hardware environment that "virtually" exists at multiple locations and multiple electronic appliances together form the virtual silicon container 3600.

Software for Both Ginter and Doyle must be installed. [2360] With VDE installed,

‘Intertrust’ supplies the VDE, based on DigiBox Transit Key Technology involving external database storage, node distribution, and an overall closed ‘virtual black box’ distributing system that prevents the users document from truly being ‘free’. (FREE ? )

Both Ginter and Doyle require additional externally networked systems or environments. Each of G and D have to code for their environments; whereas the securable independent electronic document has been designed around standards built and supported worldwide, unconditionally, having test cases proven to their extremes, and their use nevertheless as wide. Intertrust’s DRM, based on Digibox technology, and ProofSpace’s Proof Mark systems, methods of data exchange or independence capabilities are minimized because of their systems, the system’s unduly needed support structure, and each prior art’s incomplete and inadiquite solution for security due to the additional parties involved, namely themselves.

Can the system be put into ours? Can ours be put through their system? Can theirs be embedded in one of theirs? Can ours be in theirs? In ours?  
Can they be in theirs? Ours?

Ginter – Intertrust® – Marlin, NEMO, Octopus, and ScubaKeys

INTERTRUST® ‘Intertrust’

DFS LINKAGES, INC. was formed on 2002-01-24 in Michigan by PAUL DOYLE.

With 2002/0129241 Application Doyle, et al, Assigned to Proofspace, Inc, and the cooresponding patents of interest or involve as

[http://www.proofspace.com/about\\_us/corporate\\_overview.php](http://www.proofspace.com/about_us/corporate_overview.php)

Doyles 2003 application relies on other related applications.

Doyle simply creates a hash of the primary original document and adds unique time stamping data moments and represents the compiled hash(s) as simple encoded blots of dots.

Doyle says himself that it is generally preferred to have 'less reliance on trusted third parties' – [0013]

Could it be even better if to have no parties, extra, trusted, entrusted, or not that are not part of Point 'A' and Point 'B' and the segment's scope of communicate?.

Doyle only authenticates original copies of user data. [0014] Provides a graphical indication that is in addition to the original user document.

Application for patent #2002/0129241 Doyle, et al. has, as listed inventors, Doyle, Michael D.

Doyle uses additional externally related items for user document handling.

ProofMark

<http://investing.businessweek.com/research/stocks/private/snapshot.asp?privcapId=126050>

ProofSpace, Inc. develops data authentication solutions. The company offers ProofMark that monitors the integrity of customer's electronic documents, detects unauthorized changes, and enables them to prove authenticity to regulators, auditors, clients, and counsel. It also offers ProofDoc, which allows users to designate ProofMark folders on their desktop to automatically secure various files; and ProofMail that digitally seals outgoing email communications and attachments. The company serves various sectors, such as healthcare, financial services, and electronic B2B ventures. ProofSpace, Inc. was formerly known as T-Stamps.com, Inc. ProofSpace, Inc. was founded in 1999 and is headquartered ...

[0047] ProofMark certificate or certification. Certifications are sometimes referred to in this document as certificates.

Certs are encoded in the graphical form. [0055] Certification information may be encoded in graphical form. This graphical form, or design, may be referred to as an "Indicia." The record at issue may be printed out by a computer or stored electronically and bear on it an indicia that relates to the authenticity of the document. The indicia (and record) may then be scanned and interpreted by the computer to authenticate the record.

Doyle, and Proof Mark certs are XML documents. [0063]

Certs contain a minimum of certifiable type of data elements.  
[0064]

Requires server. Server has reports, stats, ect and is necessary for Doyle to function. [0065]

Certs and Logs make up Doyle environment. [0066] Verifying the data may include confirming that the data in the certificate has not been tampered with or checking a log for record of the creation of the certificate being verified.

Uses dedicated proprietary Server and Client API's. [0067]

Server, servlets and other things necessary. [0068]

The server 200 also comprises a  
servlet engine 210, HTTP server 212,  
operating system 214 and  
database 216.

Uses http communications (necessary) in order for Doyle's system to work. Must use these channels. [0069] A customer requests a certificate using the browser 218. The customer application prepares and issues a certificate issue request. The server 200 issues a certificate in response to the request.

Uses API, XML, HTTP requests and responses. Security is presented in a generic running system. [0071]

Environments are supported by coding from Doyle. ProofSpace is needed for system. [0072]

Each of G and D have to code for their environments; whereas the securable independent electronic document has been designed around standards built and supported worldwide, unconditionally, having test cases proven to their extremes, and their use nevertheless as wide. Intertrust's DRM, based on Digibox technology, and ProofSpace's Proof Mark systems, methods of data exchange or independence capabilities are minimized because of their systems, the system's unduly needed support structure, and each prior art's incomplete and inadequate solution for security due to the additional parties involved, namely themselves.

0108] Certificates

[0109] A certificate is an electronic document

[0110] Certificates are XML (extensible Markup Language) documents

[0111] HTTP server component of a server,

[0112] Certificates can, as an option, be stored in a database on the server. When that is done, a reference URL used for retrieving the certificate can be returned instead of the full certificate.

What security lapses can be exploited in, say, 5 minutes?

[0121] In weighing these considerations, the inventors have discovered that an interval length of around 5 minutes is advantageous in some situations

Are you kidding us? Programmers who really understand those object oriented procedures could exploit the COM (Common Object Model) and its most definitely attached DCOM interface;

[0234] com.proofspace.IntervalSI

[0375] com.proofspace.StartupServlet

Software must operate or fault conditions stop processes. [0376]

[0494] Indicia

[0495] encodes certificates using any graphically interpretive symbology. For example, 2-dimensional barcode symbology or data glyphs may be used.

Only machine readable / interactive.

[0496] Other examples are possible. This will allow a superficially uniform, machine-readable graphical representation for all certifications.

[0497] As discussed above, a certificate, in an exemplary embodiment, consists of a certificate containing information which can be encoded in ASCII. An XML DTD has been defined which allows XML representations of certifications to be sent over networks using the HTTP protocol, among others. However, an XML document, with its numerous markup tags and ASCII representations of binary hashed data, may be deemed by some to be aesthetically displeasing. A graphical "logo," which may also be referred to as an "indicia" or "insignia," may be made to contain the certification's data. This provides an attractive way of storing and transporting certifications outside of computer systems.

Requires host

[0501] Proofspace software should generate an indicia for a given certificate.

Graphical representation is limited and chosen by ProofMark.

[0509] The ProofMark indicia is graphically designed so that it can be rendered as a collection of squares arranged in a Cartesian grid.

[0512] In one exemplary embodiment, in order to recover ProofMark data from a scanned bitmap, reader finds the origin (e.g. the upper left corner) of the ProofMark indicia, and determine the scale being used (if multiple insignia sizes have been elected as an option. Alternatively, the application that recovers the ProofMark information from the indicia may also simply query the user as to what size or scale indicia is being scanned).

paragraph 11, '*Regarding claim 1 ...*'

11. Applicant, and specifically

- a) *'a container... (0084, content container interoperability)'*

Differs – Ginter has containers throughout and dependant upon a distributed environment 'system'. The container in Ginter relies on this 'VDE' system . Doyle creates a graphical indicia for the users document and uses the indicia in a document supporting system. Both Ginter and Doyle do not teach an independent stand alone document container.

- b) *'a character ... (0138 content)'*

A simple character text data can be part of the apparatus, located in a .

- c) *'a first interfacing means ... (0138 content encryption)'*

Applicant specifies the first interfacing means of automation, where the said character text data component can be processed automatically using components in computer system. Applicant believes, 'content encryption', as presented by the Examiner, which is different from content data automation, is better addressed below in section 'h' – a first integrity means of encryption.

- d) *'a second interfacing means ... (0141 content can include freely ...)'*

A second interfacing means of human interaction is present with the ability for the user to freely interact and work with through various text selection and handling processing, including that of copy, cut and/or paste. Ginter includes the option for freely available and secured content control information, but limits the interaction and ability for access and human processing.

- e) *'a first referencing means ... (0900, 2241 reference to where content ...)'*

The apparatus described allows

- f) *'a first encoding means ... (0212, 0546 encoding)'*

- g) *'a first embedding means ... (0212 embed data into container)'*

- h) *'a first integrity means ... (0220 encrypt content)'*

Character text data can be encrypted according to user choice. Ginter suggests and allows encryption, specifically watermarking. Encryption can be one of many types chosen by the user. Doyle

- i) *'at least one graphical ... (1540 content can include image data)'*
- j) *'a third interfacing means ... (1545)'*
- k) *'a fourth interfacing means ... (1545)'*
- l) *'a second integrity means ... (1545)'*
- m) *'at least one overall ... (1783 public key is used for integrity verification)'*
- n) *'a fifth interfacing means ... (0084)'*
- o) *'a first independence means ... (0084)'*
- p) *'a third integrity means ... (0084)'*
- q) *'a fourth integrity means ... (0084)'*
- r) *'a fifth integrity means ... (0084)'*
- s) *'a second independence means ... (0084)'*
- t) *'a third independence means ... (0084)'*
- u) *'a fourth independence means ... (0084)'*

paragraph 11, cont, *'Claim 2 is ...'*

- v) *'a first digital signing means ... (0173, 1742 digital signature)'*

paragraph 11, cont, *'Claim 3 is ...'*

- w) *'at least one or more digital signature ... (0173, 1742)'*
- x) *'digital signing means ... (0173, 1742)'*

paragraph 11, cont, *'Claim 4 is ...'*

- y) *'at least one hash check value ... (0713, 1742)'*

In regard to the Office Action's section '*Conclusion* ',  
paragraph 12, '*Any ...* '

paragraph 13, '*If ...* '

**The Objection to the Specification and the Claims Rejection Under §112.**

The spec was objected

Applicants request

First,

Note

As to how, the spec clearly

Thus the present spec clearly and completely teaches how to make and use the invention in general,, and how the template images are related to ???in particular.

Accordingly applications submit that the spec does comply with §112 and therefore request withdrawal of this objection.

**The Rejection of Claim 1-4 on**

Applicants request reconsideration of this rejection, as now applicable to claim, for the following reasons:

- 1) There is nol
- 2) The proposed combination would not be physically possible or operable.
- 3) Even if H and G were to be co
- 4) These novel physical features of claim 1-4 produce new and unexpected results and hence are unobvious and patentable over these references.

**The References and Differences of the present Apparatus Thereover**

Prior to discussing the claims and the above four points, applicants will first discuss the references and the general novelty of the present invention and its unobviusosness over the references.

Accordingly applicants submit that the dependant claims are a fortiori patentable and should also be allowed.

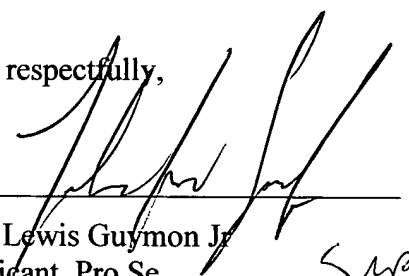

**CONCLUSION:**

For all the above reasons, applicants submit that the specification and claims are now in proper form, and that the claims all define patentably over the prior art. Therefore they submit that this application is now in condition for allowance which action they respectfully solicit.

**Conditional Request for Constructive Assistance**

Applicants have amended the specification and claims of this application so that they are proper, definite, and define novel structure which is also unobvious. If for any reason this application is not believed to be in full condition for allowance, applicants respectfully request the constructive assistance and suggestions of the Examiner pursuant to M.P.E.P. §2173.02 and §707.07(j) in order that the undersigned can place this application in allowable condition as soon as possible and without the need for further proceedings.

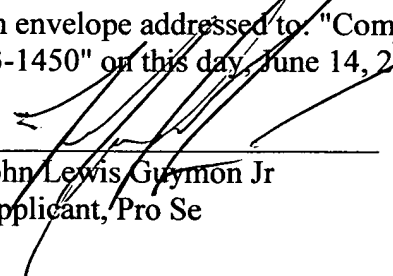

Very respectfully,

Cover Letter - First Office Action - Applicant's Reply Correspondence

September 6, 2012

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir/ Madam:

Applicant presents this letter of cover and explanation for the enclosed contents comprising Applicant's response to the USPTO's 'First Office Action' communication, dated (mailed) March 6, 2012.

This correspondence has been sent Express mail, Tag #, dated September 6, 2012 and includes:

- 560<sup>00</sup> Second Petition for Extension of Time To Reply (3 Months - Due September 6, 2012)
Payment, Ck#: [handwritten] (2nd partial payment) (Total: \$635 Total (Small entity (1.17(a)(3)))
NOT Copy, prev Ck# (1st partial payment) (Initially One (1) Month: \$75 )
Amendments w/Reply (12 pages) 18 pages
Information Disclosures (SB08A/B, 14 pages) (Added: 99 Pats, 88 Apps, 77 Refs)
Specification, as amended (38 pages)
Claims, 1-4, as amended (3 pages)
part of spec

Thank you for your consideration and time with this return correspondence.

Very respectfully,

John Lewis Guymon Jr
Tel: (801) 938-4833

Alexandria, VA 22313-1450

Sir/ Madam:

This applicant herewith petitions the Director of the United States Patent and Trademark Office to further extend the time for reply to the Office Action dated March 6, 2012 (mailed 3/6/2012) an additional two (2) months, for a total of three (3) months, extending the date for reply from the original date of June 6, 2012 to September 6, 2012.

Submitted and included herewith is a check (Ck# 1365) for five hundred sixty (\$560.00) dollars, a second payment in part to be combined with the original one (1) month extension payment, check (Ck#1343, a copy enclosed) for seventy-five (\$75.00) dollars, to pay in full the small entity three (3) month extension fee amount in total, as per 37 CFR 1.17(a)(3), of six hundred thirty-five (\$635.00) dollars.

Thank you for your further consideration and time with this second extension request.
Very respectfully,

John Lewis Guymon Jr
Tel: (801) 938-4833
Msg: (801) 943-8461

Handwritten numbers: 1365, 560, 935151456, 45

09/10/2012 CNGUYEN2 00000022 12316699

Certificate of Mailing

01 FC:2253

560.00 0P

I certify that this correspondence will be deposited with the United States Postal Service as Express Mail, Tx# [ ], proper postage affixed in an envelope addressed to: "Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450" on the 6th day of September 2012.

Applicant

Patent Application of

John Lewis Guymon Jr

for

**TITLE: SECURABLE INDEPENDENT ELECTRONIC DOCUMENT**

**CROSS-REFERENCE TO RELATED APPLICATIONS**

[0001] This application claims benefit of a Disclosure Document filed with the USPTO, titled "Intelledoc<sup>®</sup> – Intelligent Electronic Document", Serial No. 610142, filed December 16, 2006.

[0002] This application claims benefit of a Disclosure Document filed with the USPTO, titled "eSuretyBailBond - Electronic Surety Bail Bond", Serial No. 610141, filed December 16, 2006.

**FEDERALLY SPONSORED RESEARCH**

[0003] Not Applicable

**BACKGROUND—FIELD**

[0004] Inscribed within generally relates to information handling and specifically to electronic documents. Various aspects of an electronic document apparatus are described and are particularly applicable to the security and manufacture of the document container, as well as a few of the many involved processes, methods of use and possible comprised systems of the apparatus. Additional aspects presented relate to the electronic document's methods of handling and use, for example in

providing secure independent information delivery in industries of securities, commerce, trade and/or exchange.

#### BACKGROUND OF THE INVENTION—PRIOR ART

[0005] With life, there is the digital world. With information, there is the digital world. Now days, they are one in the same. We are always asking, “Is it secure?” We live, having our world untouched by anyone else, desiring so much to have things as we left them, untouched.

[0006] The technology available today allows life to seemingly flow at the speed close to that of light itself. We are literally there before we finish the push of the button. We struggle to comprehend such speeds, and will continue to do so, in such a dynamic and fast paced world. Information should be handled with care. To maintain the integrity of our intent, it must be secure.

[0007] In order to facilitate the creation and editing of electronic documents containing our information world, vast amounts of variable types of technology can be used. Agreed upon formats, specifications, recommendations and other standard defined help in accomplishing a particular task with greater information exchange and security.

[0008] Information exists in many variable formats and is transported in a vast spectrum of ways. Within the digital world, a substantial format set is available for equally substantial information type accommodations. For instance, character data handling is accomplished using text-based languages supporting a functional ‘mark up’ approach, having data populated with tags or other identification delimiters or data descriptors. These forms are of the markup language family, such as those of SGML, XML, HTML, cXML and other text based formats among the multiples of these established containment types.. Further image and other visually handled data is often supported using graphic image based file formats, such as PNG, JPG, TIFF, GIF, BMP and others established in the market place.

[0009] The basis of the teaching is to facilitate knowledge in the area of information processing and exchange. There are electronic information document type containers developed recently with the inability to support the secure and independent exchange as presented and taught in the following.

[0010] Document handling systems, databases and vault systems, as well as other transaction oriented processes, information transfers and data representations. For the purpose of this disclosure and illustration of multiple embodiments, the various possible configurations of an electronic document are focused upon for reasons of security, independence, flexibility in construction, and in support of other needs.

[0011] Tangible document content range from simple character text to full color text data, with external formatting information to image data of varying form, to audio and multimedia data, to metadata, to binary data, all of which can be included within.

[0012] All areas of industry require documents, many of which have security/requirements/needs. Specifically, insurance, mortgage, securities, as well as other financially based documents; many have highly regulated legal requirements. The required technology for their electronic handling was arguably unavailable for the most part prior to the turn of the Millennium. Considerable energy to create a “paperless world” has been expended, and these efforts are ongoing. Despite all of the world’s labors, highly valued documents still often remain in paper form. Where is an electronic container that will secure these assets digitally?

[0013] Viewing a graphic image may include the perception of dots, lines, characters, scripts, meshes, shades, arrangement, proportion, scale, and color. Content is presented reflecting true life and nature. Real life and nurture tells us information is here, whether it is an artistic representation of a data element or value or an intense artistic representation of the elements in life itself. A picture has been said to be worth a thousand words. Data in image form often possess substantial information content.

[0014] Similar, character text can be perceived visually. Character text in this same form can also be processed systematically. Character data is based on memory addressing units, having an array of different character representations available for the different character text data unit values. Character text includes the letters making up the words you read here. Information in its everyday basic simplest form is here, here, written with the letters of each and every one of these words that you read.

Patent Application of John Lewis Guymon Jr for  
“Securable Independent Electronic Document”  
Page 4

[0015] The usage of paper forms is a predominant method for producing documents, and these forms tend to have a fixed layout and some areas of variable content. The desire to electronically create and process the information contained within documents has existed for some time and will continue. With electronic processing means, documents can be better adapted for digital commerce, trade, and exchange of transactions. Providing a container to envelope these documents increases the electronic options available for their support.

[0016] Bonds, powers of attorney, titles, deeds, leases, judgments, motions, affidavits, and other paper documents have been in use for long periods of time. These document types, in either original paper only medium or in a digital graphic memory contain a visual image or picture of the actual information that is of a transaction. Electronic form allows information storage and handling up and beyond that of the visual image-handling interface. Within digital data memory capabilities lay the ability for raw character based data to be represented. Having the two different data representation types for the information, those that of graphical image and character text, a container is built to handle exchange and transaction. Either singly or in combination, character text and graphical image data components can be present for information conveyance. Only recently have these documents had the support in place needed to facilitate the document’s handling completely using electronic means. Now, with the ability in place to facilitate both character text and graphical image components, the harmony in its presentation, handling, independence and security relies on a few key issues, specifically what is needed and how can it be done?

[0017] Information handling has its required attention and resource requirements. Security issues mandate a majority of container development process. A system built upon a well working container that includes independency from outside system requirements extends the efficiency and control of internal resources. Such efficiency and control can be maximized, becoming a secure independent electronic document solution.

[0018] Monetary based transactions have been in existence before the printed money it represented was. Trade and commerce, along with exchange, barter, vendor or vender oriented agreements have had a need to be facilitated in some fashion, similar to the mineral exchange of gold, silver, platinum and others. Money, specifically paper money and coin, is a commonplace vehicle for resource

Patent Application of John Lewis Guymon Jr for  
“Securable Independent Electronic Document”  
Page 5

structured exchange and management. Monetary based items, assets, transactions and other commonplace vehicles structured on such systems all speak of the same desire and need, that being value and asset management and exchange.

[0019] Industries, such as those of the Surety, Insurance or Bail Bonding industries, have used tangible based financial supporting documents since the beginning of human based insurance back.

[0020] To represent this industry, a representation of both the ‘graphical image’ and ‘character text’ must be included for complete adapted functionality. Security is based on party involvement and need to know regulations. If independence from ‘third’ party is further supplied, security is only enhanced. Having your own way of packaging, distribution, processing, transacting, verifying, or authenticating document information with no internally placed outside based party is a must. Technology is available for such a system. Notarizations, or witness related verifications, have been around since times of Kings and Queens; however, for the digital equivalent, the technology has only been around since the years of the turn of the Millennium. What is needed is the independent container that supports the highest statutes backed electronic information handling possibilities defined today.

[0021] The options of markup type languages such as XML and others as the main structural component for document and sub-document handling needs has become a world wide accepted way of handling the inter-relational aspects of data files and their containment handling, grouping or other object or element structuring of relational data. The extreme ends of the data type spectrum are those of character text and graphical image. ‘Graphical image’ as the container for the character text becomes the solution more so than character text as the container for the graphical image.

[0022] Independent ‘graphic image’ containers further support handing, interface and integrity means required for enhancing security of electronic document contents. The need for digital signature signed data was necessary as well. The combination of the three increased the security measures in place. Again, security is further enhanced with the independence from other non-invited or desired parties. Further, with the ability to develop applications in house, easily, with world wide support allows a simpler manufacturing environment, reduces costs of such environments, and eases or completely releases restrictions for development, distribution, interaction, verification, authentication and achieve of the container, further developing its independence.

[0023] Many ways of handling information are reliant upon commercial or other vendor or vender interaction. Further, there are restrictions in how data is processed, or, even further, the previous art present only parts of the electronic document apparatus, having other parts and systems and other commercially interlaced information transmissions and exchanges. Original documents are sometimes made from scanned sources, virtually removing the dynamic allocation and build properties available in a real time document manufacturing process. Additionally, some information or other image data embedding arts actually go further than that, and forever alter or restrict the original image content.

[0024] This has made and is making digital information transfer complex; further, only parts of the solution exist. A mirage of devices, interfaces, methods, all exist, and these pieces and sub standard methods creates more problems. The issue is of interoperation of the document contents. With the people involved, methods of transfer, degree of security, and control of all entities and their parties involved, there is a dedicated portion of document handling and security that needs attention.

[0025] Feature rich vendor supplied solutions are sometimes richer in content than desired. Features that are not always necessary for commonplace transactions are become common all over the place hurdles always necessary that are not features. Further, a solution that answers to all needs are in fact sometimes too much.

[0026] Prior art shows examples of complete systems that present a way of electronic document control. None of the references would piece apart or combine together to create the electronic document, specifically with regard to standards.

[0027] Prior art handles electronic documents and its delivery in different ways, further having mechanisms or apparatus that are different and act differently.

[0028] Different prior art references teach handling of data in an electronic document differently. Some alter data of an image; some built a system that comprises the document.

[0029] What is needed is a securable independent electronic document that solves one or more problems described herein and/or one or more problems that may come to the attention of one skilled in the art upon becoming familiar with this specification.

[0030] Prior art consists of a variety of document container, their methods and their uses. The field presents several related prior art references that offer some improvements made in the field to resolve these issues. Examples include but are not limited to the references described below, which references are incorporated by reference herein:

[0031] U.S. Pat. No. 7,451,156 issued to Ornstein, et al. sets forth a METHOD AND APPARATUS FOR MAINTAINING RELATIONSHIPS BETWEEN PARTS IN A PACKAGE.

[0032] U.S. Pat. No. 7,441,185 issued to Coulson, et al. sets forth a METHOD AND SYSTEM FOR BINARY SERIALIZATION OF DOCUMENTS, teaches documents are considered main that of text XML, and this process reduces the XML's footprint as it is transferred.

[0033] U.S. Pat. No. 7,418,652 issued to Ornstein, et al. sets forth a METHOD AND APPARATUS FOR INTERLEAVING PARTS OF A DOCUMENT.

[0034] U.S. Pat. No. 7,383,502 issued to Shur, et al. sets forth PACKAGES THAT CONTAIN PRE-PAGINATED DOCUMENTS.

[0035] U.S. Pat. No. 7,383,500 issued to Shur, et al. sets forth METHODS AND SYSTEMS FOR BUILDING PACKAGES THAT CONTAIN PRE-PAGINATED DOCUMENTS.

[0036] U.S. Pat. No. 7,373,330 issued to Klebe sets forth a METHOD AND APPARATUS FOR TRACKING AND CONTROLLING E-MAIL FORWARDING OF ENCRYPTED DOCUMENTS, teaches multiple publisher type oriented apparatus to request, email, download program and data and decrypt data.

[0037] U.S. Pat. No. 7,366,982 issued to Shur, et al. sets forth PACKAGES THAT CONTAIN PRE-PAGINATED DOCUMENTS.

[0038] U.S. Pat. No. 7,359,902 issued to Ornstein, et al. sets forth a METHOD AND APPARATUS FOR MAINTAINING RELATIONSHIPS BETWEEN PARTS IN A PACKAGE, teaches a package system using XML.

Patent Application of John Lewis Guymon Jr for  
“Securable Independent Electronic Document”  
Page 8

[0039] U.S. Pat. No. 7,356,143 issued to Morten sets forth a SYSTEM, METHOD, AND APPARATUS FOR SECURELY PROVIDING CONTENT VIEWABLE ON A SECURE DEVICE, teaches Media player doing encrypt and decrypt steps.

[0040] U.S. Pat. No. 7,343,339 issued to Harrison Jr., et al. sets forth an ELECTRONIC BOND AND GUARANTY PROCESS AND BUSINESS METHOD.

[0041] U.S. Pat. No. 7,330,974 issued to Silverbrook, et al. sets forth a METHOD AND SYSTEM FOR DELIVERY OF A SECURE DOCUMENT, teaches altering images with message data.

[0042] U.S. Pat. No. 7,330,560 issued to Donescu sets forth an INSERTION AND EXTRACTION OF A MESSAGE IN AN IMAGE.

[0043] U.S. Pat. No. 7,299,408 issued to Daconta, et al. sets forth an ELECTRONIC DOCUMENT VALIDATION.

[0044] U.S. Pat. No. 7,296,217 issued to Earnshaw, et al. sets forth an ELECTRONIC TRANSACTION DOCUMENT SYSTEM.

[0045] U.S. Pat. No. 7,295,207 issued to Yoon, et al. sets forth a METHOD FOR MANAGING ANIMATION CHUNK DATA AND ITS ATTRIBUTE INFORMATION FOR USE IN AN INTERACTIVE DISC.

[0046] U.S. Pat. No. 7,251,832 issued to Venters, III, et al. sets forth a SECURE STREAMING CONTAINER, teaches open streaming channel of media from specific exe.

[0047] U.S. Pat. No. 7,251,644 issued to Viola, et al. sets forth PROCESSING AN ELECTRONIC DOCUMENT FOR INFORMATION EXTRACTION.

[0048] U.S. Pat. No. 7,199,804 issued to Bhattacharyay, et al. sets forth INK INFORMATION IN IMAGE FILES.

[0049] U.S. Pat. No. 7,191,392 issued to Coar sets forth a SYSTEM AND METHOD FOR THE CREATION OF VIRTUAL INFORMATION PACKAGES, teaches Combination of files into a package, with access rule.

[0050] U.S. Pat. No. 7,191,186 issued to Pullen sets for a METHOD AND COMPUTER-READABLE MEDIUM FOR IMPORTING AND EXPORTING HIERARCHICALLY STRUCTURED DATA.

[0051] U.S. Pat. No. 7,181,017 issued to Nagel, et al. sets forth a SYSTEM AND METHOD FOR SECURE THREE-PARTY COMMUNICATIONS.

[0052] U.S. Pat. No. 7,172,122 issued to Alleshouse sets forth an XML SYSTEM.

[0053] U.S. Pat. No. 7,089,248 issued to King, et al. sets forth a GROUP FILE DELIVERY INCLUDING USER-DEFINED METADATA.

[0054] U.S. Pat. No. 6,954,542 issued to Miyake, et al. sets forth an IMAGE PROCESSING APPARATUS AND METHOD, teaches an application to put information into pixel image.

[0055] U.S. Pat. No. 6,908,034 issued to Alleshouse sets forth an XML SYSTEM.

[0056] U.S. Pat. No. 6,862,599 issued to King sets forth a SOFTWARE-BASED METHODOLOGY FOR THE STORAGE AND RETRIEVAL OF DIVERSE INFORMATION, teaches Pointer management for hierarchy based data.

[0057] U.S. Pat. No. 6,643,383 issued to Dugelay sets forth a METHOD FOR HIDING BINARY DATA IN A DIGITAL IMAGE.

[0058] U.S. Pat. No. 6,616,702 issued to Tonkin sets forth PREVIEWING AN ASSEMBLED DOCUMENT.

[0059] U.S. Pat. No. 6,507,858 issued to Kanerva, et al. sets forth a SYSTEM AND METHOD FOR STORING ORDERED SECTIONS HAVING DIFFERENT FILE FORMATS.

[0060] U.S. Pat. No. 6,342,954 issued to Hisatomi, et al. sets forth an IMAGE INFORMATION PROCESSOR AND IMAGE INFORMATION TRANSMITTER.

[0061] U.S. Pat. No. 6,192,138 issued to Yamadaji sets forth an APPARATUS AND METHOD FOR EMBEDDING/UNEMBEDDING SUPPLEMENTAL INFORMATION, teaches Image and watermarking.

[0062] U.S. Pat. No. 6,138,119 issued to Hall, et al. sets forth TECHNIQUES FOR DEFINING, USING AND MANIPULATING RIGHTS MANAGEMENT DATA STRUCTURES, teaches techniques for defining, using and manipulating digital rights management data structures.

[0063] U.S. Pat. No. 6,055,321 issued to Numao, et al. sets forth a SYSTEM AND METHOD FOR HIDING AND EXTRACTING MESSAGE DATA IN MULTIMEDIA DATA, teaches hardware for examining media extracting message from transformed/scrambled data in media.

[0064] U.S. Pat. No. 5,894,558 issued to Falker sets forth a METHOD OF DISPATCHING DOCUMENTS BY CONVERTING THE DOCUMENTS FROM A CUSTOMER SPECIFIC DATA FORMAT TO A STANDARDIZED DATA FORMAT, AND THEN TRANSMITTING THE DOCUMENTS VIA MOST FAVORABLE WAY TO RECIPIENTS.

[0065] U.S. Pat. No. 5,778,372 issued to Cordell, et al. sets forth REMOTE RETRIEVAL AND DISPLAY MANAGEMENT OF ELECTRONIC DOCUMENT WITH INCORPORATED IMAGES.

[0066] U.S. Pat Application 20070106932, Coar, sets forth a SYSTEM AND METHOD FOR THE CREATION OF VIRTUAL INFORMATION PACKAGES, teaches a container of files with access rules.

[0067] U.S. Pat Application 20070011457, Dubinsky, et al. sets forth a METHOD FOR DISPLAYING AND PRINTING DIFFERENT SIZES OF SMART DOCS, teaches a visual display method for viewing a document, solving previous display issues.

[0068] U.S. Pat Application 20060150151, Dubinsky, sets forth a METHOD AND SYSTEM FOR EMBEDDING USER ASSISTANCE IN DOCUMENTS UTILIZING MARKUP LANGUAGES, teaches a system and method for providing user assistance directly in the document, where the document is of the XML type.

[0069] U.S. Pat Application 20060136477, Bishop, et al. sets forth a MANAGEMENT AND USE OF DATA IN A COMPUTER GENERATED DOCUMENT, teaches a multipart electronic document allowing sectional sub-document editing and control.

[0070] U.S. Pat Application 20060080599, Dubinsky, sets forth a METHOD AND SYSTEM FOR BUILDING AUDIT RULE SETS FOR ELECTRONIC AUDITING OF DOCUMENTS, teaches a system and method for creating documents, audit rule-sets and testing requirements. Included is application software for creation of rule sets and properties, having the software limit the documents full use and potential. The document is based exclusively on XML components with a reduced feature set capability.

[0071] U.S. Pat Application 20050138382, Hougaard, et al. sets forth a METHOD AND PROCESS FOR CREATING AN ELECTRONICALLY SIGNED DOCUMENT.

[0072] U.S. Pat Application 20040237040, Malkin, et al. sets forth a SYSTEM AND METHOD OF PROCESSING AN ELECTRONIC FORM USING LAYERED ASPECTS.

[0073] U.S. Pat Application 20040128513, Wu, Yen-Hsing, et al. sets forth a SECURED ELECTRONIC DOCUMENT AND METHOD OF VALIDATING THE SAME, teaches a secured electronic document and method for securing documents using printing means.

[0074] U.S. Pat Application 20030046274, Erickson, et al. sets forth a SOFTWARE MEDIA CONTAINER, teaches a secure media container and its handling apparatus for specifically limited digital rights management using a single container with external data and reference thereof.

[0075] U.S. Pat Application 20020066019, Amonou, et al. sets forth INSERTION OF MESSAGES IN DIGITAL DATA, teaches a method and device to make it possible to insert messages in a subset of digital data whilst ensuring the required robustness and invisibility.

[0076] U.S. Pat Application 20020059144, Meffert, et al. sets forth a SECURED CONTENT DELIVERY SYSTEM AND METHOD, teaches implemented PKI encryption between sender and recipient.

[0077] U.S. Pat Application 20010027459, Royal, sets forth a METHOD AND APPARATUS FOR ELECTRONIC DOCUMENT EXCHANGE, teaches a method for document exchange using standard protocols that's flexible and easy to use. Shown is a specific document exchange system using specific relationships. Combination containers are used and are not dedicated document containers.

[0078] While the foregoing described prior art have provided elements of operation, they lack ability to be secure, independent of additional party involvement, having original document authentication, automation, interface and handling functionality;

[0079] Other prior art using methods such as signature mapping on graphic representations, transportation of text based content allowing alteration, outside party interface dependant, commercialized and controlled, content duplicated, specific data format type excessed, content and cross-content support limited, altered or other missed security measured methods s required for today's digital exchange, commerce, and trade transactions for electronic information.

[0080] Environment in which the document is in is intense and requires enormous resource. The steps forward in processing the idea, the prototype and a working version that could sustain the market vitality are enormous, even though the distances traveled are small.

[0081] Thus, there remains a need in the art for a securable independent electronic document. An apparatus that is securable, easy to use, robust, alteration detectable and independent of other party's involvement, supportive of digital signatures and their witnesses, and supports complete closed party information exchange.

Patent Application of John Lewis Guymon Jr for  
“Securable Independent Electronic Document”  
Page 13

[0082] Prior art heretofore known suffer from a number of disadvantages, which include a number of information integrity processes.

[0083] Without a unique container, individual, simple, in-house defined ways of document processing is not allowed; it's not totally secure, for sure. Further, custom, private handling solutions cannot be used or included, nor can they be conducted, without having total control of this container. A securable independent electronic document container is defined having absolute handling means. Further, it is defined to have intentional dedication to the security within.

[0084] Security is of the utmost importance. Take a bail bond document, for example. The said document becomes a promise that good intentions are desired between all parties. It further shows the urgency and need to solve issues or problems at hand, if any. In this industry, there is a yielding to the way of the more critical needs of humanity. A simple document; a promise of resource or asset; A guarantee that information moves on, without delay. Legal processes and matters thereof are among the highest in need for common humanity based affairs. Each side depends on the document to help with issues of resource management, be-it time or money, or both. Resources close to 'home' influence and shape our lives more than the courts, fees, jails, bonds, sureties, insurances and risks. However, in the system, money has a way of saying something, and incorrect, inefficient and pretend solutions have a way of getting up and moving. The electronic document speaks its monetary and asset value having delay, inefficiency, resistance, or other influences left at the curb.

[0085] People should feel confident of their transactions. Interoperability is one main consideration. The 'binary visually graphic' container is operable among all systems and platform and computer systems. Simple cut and paste. That's all we want! It's possible. In the older DOS editors, the document can be edited, having its internal text contents simply cut and pasted into a new formed destination file, and the contents comes alive, executing, establishing, presenting, processing, transacting as needed. Any text, let alone any data, can be in there.

[0086] Cross platform creation for the reading, printing, and processing of the electronic document can occur. Further, as dates continue, as do version oriented software releases, base support will be built in already.

[0087] Developing standards or other normative based recommendations are available which describe many of the possible internal and external working components. Various utilities, tools and other applications are widely available for document creation, delivery, verification, automation, and other transaction processes. With the binary type container can be carried, such as via email or zip file or other box. Graphical applications can display visual images at the same time that text-editing applications can present character texts. The container is well supported. Tools to support are available and free.

[0088] Container could either support easy non-scripting simple graphic data decompression or character text processing interaction. With the simple graphical display being first, generic errors, such as buffer overflows or failed dictionary or image reconstructions. These generally would create internal errors and such would occur and trigger a simple closing, stoppage of processing response, which would cause little disruption. The Process of the character text could be done, generally in either area or 'interfacing' phase of the document. For instance an initial read could be done to the document, exposing its detailed content to the computer for routing and designation delivery, processing, operations and other integrated procedures or functions.

[0089] These sections can have the character data text languages that work within 7 or 8 bit formats. Remember, any data could be placed in a 6 Bit format using the Base64 MIME encoding, which, for example, could be done with international multiple character byte language formats. A use of an extensible markup language (XML), for example digital signatures and extensible hypertext markup language (XHTML), which are commonly used for creating electronic documents. Scripting code, protocol text, server page ASP, batch file process or other such text based formats are easily placed in the text sections.

[0090] Can represent and support a large variety of paper-based documents or electronic based documents.

[0091] Another feature with the electronic document is the ease of handling for document variation. Within any industry, individually dictated practices or other various conditions involved in processing an electronic document is completely supported. For example, in mortgage transactions, certain

lenders may have a common set of requirements for document validity, but might supplement these with their own particular requirements.

[0092] Impossible to Combine- The mix of the two environments, character text and graphic, is the combination of the two different environments that have evolved since the beginning of computer systems.

[0093] Rewrite The present invention can be embodied in various forms, including business processes, computer implemented methods, computer program products, computer systems and networks, user interfaces, application programming interfaces, and the like.

[0094] Prior art have differences in their presentation of the electronic document, and therefore are complete solutions that do not interact. Further, some references have technology reversed, showing combination can still be unobvious.

[0095] The World Wide Web Consortium (W3C) is the organization responsible for the XML standard, DTDs and related standards (<http://www.w3.org>). Notwithstanding the reference to DTDs to define the structure of XML documents, it should be understood that other specifications, methodologies, systems, protocols, or schemes could define the structure of markup languages.

[0096] Applications are not putting options in for a major embedded section of character text

[0097] There is no suggestion or teaching that references or presents a serried of combined ISO/IEC/W3C standards, specifically none placing digital signatures, notarizations, and self-containment inside digital graphic images.

[0098] Unobvious was the suggestion to combine the character text and graphic elements. There were prior suggestions for metadata or a comment, but the idea of internally supporting simple or rich text, markup or system command language or further other encoded random data has not come to light, let alone auto processed, digitally signed or digitally witnessed data.

## BRIEF SUMMARY OF THE INVENTION

[0099] Taught within is the development of an electronic document in response to the present state of the art, and in particular, in response to the problems and needs in the art that have not yet been fully solved. Accordingly, the embodiments presented within teach various possible solutions using an electronic document apparatus. Described herein, the apparatus shows to accompany variously different information handling requirements of exchange, commerce and trade. Offered with the electronic document apparatus is security and independence in its process, method, and manufacture, offering a system for the secure independent electronic document operation.

[0100] Providing an inert container for an electronic document having advanced security features, particularly those allowing complete system control of said container, doing so with a selected set of parties, and no more. Independence is further extended with verification abilities, allowing original vendors to verify the container and its contents.

[0101] Interrelated security with in document secures document further. Each interface could support characterization of the other, and interact to bind data of both format types.

[0102] Digital signatures, let alone XML has not been presented as something that should heavily populate a comment field, making an image container become a secure document.

[0103] The use of the electronic document using embedded enhanced XML protocols has not been discussed nor realized, and further, repeated missed signification realizations with focus diverted elsewhere shows lack of advantage realization.

[0104] The only link that best made sense was the text super imposed into the graphic format.

[0105] Any mention of items embedded are for descriptive or metadata purposes.

[0106] The main ‘things’ had come to frustration. It was that a mix of the two, preferably in the course of ‘into one document’. Due to its advantages, the building of the electronic document would have transpired by this time.

[0107] The problem with securities assets transfer required solid positive control of container for such assets. Not until now has there been a container with enhanced security containing both automated data and visual presentation.

[0108] Standards are designed for voluntary use and do not impose any regulations. However, laws and regulations may refer to certain standards and make compliance with them compulsory. For example, the physical characteristics and format of credit cards is set out in standard number BS EN ISO/IEC 7810:1996. Adhering to this standard means that the cards can be used worldwide. [0000] Any standard is a collective work. Committees of manufacturers, users, research organizations, government departments and consumers work together to draw up standards that evolve to meet the demands of society and technology. British Standards' staffs act as secretaries to these committees and project manage the production of standards. As the world's oldest National Standards Body, BSI British Standards has over 100 years' experience of bringing together these often very varied viewpoints and of facilitating consensus.

[0109] A person skilled in a variety of art areas will become aware of how these established channels of protocol can become a solution for a spectrum of generically accepted possibilities of digital electronic commerce processing.

[0110] For the every day person, a picture identifies an item, and with a simple character data-interfacing environment, becomes a document that works for many purposes.

[0111] Outer wrapper gets the security container award.

[0112] Further, inert, free of platform and vendor requirements, you could do it!

[0113] The enhanced security, auto processing, cut and paste, and principle human interaction is a unique combination of features related to the electronic document.

[0114] Several steps in regards to XML and digital signatures, as well as the incorporation of the finalized secured data section into the image container requires several stages of steps in order to generate an electronic document of its type.

Patent Application of John Lewis Guymon Jr for  
“Securable Independent Electronic Document”  
Page 18

[0115] The commercial value of the electronic power of attorney relates to many aspects of information, data or other valued managed asset relates to the value of the item itself. Having the capability to support security measures that, when in place, can ensure transactions are done correctly and in form that is verifiable and authenticable then ensures the asset is secure. With this, the value then becomes that of the monetary or other financial worth of the asset itself.

[0116] Included is optional ‘receipt’ possibilities, where the document’s contents and a show of service or directed process is created.

[0117] Multiple embodiments are presented within, and in their accordance, an electronic document apparatus, method, system and its manufacture is presented, teaching a solution for secure independent digital electronic commerce and trade.. Said embodiments allow ‘Electronic Commerce and Trade’ to be secure and vendor independent. Within each embodiment’s system, an apparatus can be manufactured using the method described therein. The electronic documents are proven in process, allowing immediate implementation and use, in similar to that of presented embodiments. An electronic document handling digital signatures, graphic representation, data automation all within an unalterable, verifiable, secure container is explained.

[0118] Use of what’s described allows freedom in the commerce world, removal of vendor dependencies, and compliance with standard structure. Therefore, in accordance with the inscribed description, objects, features, drawings and advantages, simple electronic commerce transactions can be executed with proven, well established standard information exchange specifications and recommendations, and can become an asset!?.

[0119] Emca International (Emca) is an international, private (membership=based) non-profit standards organization for information and communication systems. It acquired its name in 1994 European Computer Manufactures Association (EMCA) Geneva, 1961, To standardize systems.

[0120] Mentioned here are a few outstanding embodiments in their ‘functional form’ wording.

[0121] Document encryption can either be on character data, before any base 64, or on the image data, having image data encrypted/scrambled before image section creation.

[0122] The eXtensible Markup Language (XML) can be used to facilitate implementation of integrated programmable World Wide Web ("Web") based services. Through the exchange of XML-related messages, services can describe their capabilities and allow other services, applications or devices to easily invoke those capabilities. The Simple Object Access Protocol (SOAP) has been developed to further this goal. SOAP is an XML-based mechanism that bridges different object models over the Internet and provides an *open* mechanism for Web services to communicate with one another.

[0123] XML provides a format for describing structured data, and is a markup language that is similar in form to Hyper Text Markup Language (HTML) in that it is a tag-based language. Unlike HTML, however, XML tags are not predefined, permitting greater flexibility than possible with HTML. By providing a facility to define tags and the structural relationship between tags, XML supports the creation of richly structured Web documents.

[0124] The XML standard describes a class of data objects called XML documents and partially describes the behavior of computer programs which process them. XML documents are made up of storage units called entities, which contain either parsed or unparsed data. Parsed data is made up of characters, some of which form character data, and some of which form markup. Markup encodes a description of the document's storage layout and logical structure. XML provides a mechanism to impose constraints on the storage layout and logical structure.

[0125] XML "elements" are structural constructs that include a start tag, an end or close tag, and the information or content that is contained between the tags. A "start tag" is formatted as "<tagname>" and an "end tag" is formatted as "</tagname>".

[0126] In an XML document, start and end tags can be nested within other start and end tags. All elements that occur within a particular element have their start and end tags occur before the end tag of that particular element. This defines a tree-like structure. Each element forms a node in this tree, and potentially has "child" or "branch" nodes. The child nodes represent any XML elements that occur between the start and end tags of the "parent" node.

[0127] One exemplary usage of XML is the exchange of data between different entities, such as client and server computers, in the form of requests and responses. A client might generate a request for information or a request for a certain server action, and a server might generate a response to the client that contains the information or confirms whether the certain action has been performed. The contents of these requests and responses are in the form of XML documents, i.e., sequences of characters that comply with the specification of XML.

[0128] [TITLE] The XML Signature Recommendation (*XML-Signature Syntax and Processing*) defines standard means for specifying information content to be digitally signed, including the ability to select a portion of an XML document to be signed using an XPath transform. [w3c digsig abstract] A specification located at <http://www.w3.org/TR/xmlsig-core/> teaches the current version of the XML digital signature processing rules and syntax.

[0129] XML Signatures provide data *integrity*, message and/or signer authentication services for data of any type, whether located within the XML that includes the signature or elsewhere.

[0130] The SOAP specification defines a uniform way of passing XML-encoded data. It also defines a way to perform remote procedure calls (RPCs) using HTTP as the underlying communication protocol.

[0131] A SOAP message is an XML document that includes a mandatory SOAP envelope, an optional SOAP Header, and a mandatory SOAP Body. SOAP provides a protocol specification for invoking methods on servers, services, components and objects. SOAP codifies the existing practice of using XML and HTTP as a method invocation mechanism. The SOAP specification mandates a small number of HTTP headers that facilitate firewall/proxy filtering. The SOAP specification also mandates an XML vocabulary that is used for representing method parameters, return values, and exceptions.

[0132] SOAP provides an *open*, extensible way for applications to communicate using XML-based messages over the Web, regardless of what operating system, object model or language particular applications may use. SOAP facilitates universal communication by defining a simple, extensible message format in standard XML and thereby providing a way to send that XML message over HTTP.

phrases "one embodiment," "an embodiment," and similar language throughout this specification may, but do not necessarily, all refer to the same embodiment, different embodiments, or component parts of the same or different illustrated invention. Additionally, reference to the wording "an embodiment," or the like, for two or more features, elements, etc. does not mean that the features are related, dissimilar, the same, etc. The use of the term "an embodiment," or similar wording, is merely a convenient phrase to indicate optional features, which may or may not be part of the invention as claimed.

[0142] Each statement of an embodiment is to be considered independent of any other statement of an embodiment despite any use of similar or identical language characterizing each embodiment. Therefore, where one embodiment is identified as "another embodiment," the identified embodiment is independent of any other embodiments characterized by the language "another embodiment." The independent embodiments are considered to be able to be combined in whole or in part one with another as the claims and/or art may direct, either directly or indirectly, implicitly or explicitly.

[0143] Finally, the fact that the wording "an embodiment," or the like, does not appear at the beginning of every sentence in the specification, such as is the practice of some practitioners, is merely a convenience for the reader's clarity. However, it is the intention of this application to incorporate by reference the phrasing "an embodiment," and the like, at the beginning of every sentence herein where logically possible and appropriate.

[0144] As used herein, "comprising," "including," "containing," "is, are," "characterized by," and grammatical equivalents thereof are inclusive or open-ended terms that do not exclude additional unrecited elements or method steps. "Comprising" is to be interpreted as including the more restrictive terms "consisting of" and "consisting essentially of."

[0145] As used herein, "graphic file", "image file", "image", "graphical data", "graphical image", "WMP", "JPG", "BMP", "PNG", "JPG", "TIFF", "GIF", "JIF", "JNG", SVG, and RTF includes any type of a visually graphic humanly perceivable medium or image based data.

[0146] As used herein, "standards group", "ISO", "IEC", "W3C" includes any normative group or organization.

## BRIEF DESCRIPTION OF THE DRAWINGS

[0135] In order for the advantages of the invention to be readily understood, a more particular description of the invention briefly described above will be rendered by reference to specific embodiments that are illustrated in the appended drawings. Understanding that these drawings depict only typical embodiments of the invention and are not therefore to be considered to be limiting of its scope, the invention will be described and explained with additional specificity and detail through the use of the accompanying drawings, in which:

[0136] For a more complete understanding of the present invention, reference is now made to the following descriptions taken in conjunction with the accompanying drawings, in which:

[0137] Listed are drawings that in no way limit the possibilities of the apparatus.

[0138] FIGS. 1A through 1E are block diagrams illustrating an embodiment. FIG 1A is a block diagram of one embodiment in accordance with the present invention. FIGS 1B through 1E are block diagrams of sections within the embodiment.

[0139] FIG 2 is a schematic diagram illustrating some of the types of files, if any, that may be enveloped within an embodiment.

[0140] For the purposes of promoting an understanding of the principles of the invention, reference will now be made to the exemplary embodiments illustrated in the drawings, and specific language will be used to describe the same. It will nevertheless be understood that no limitation of the scope of the invention is thereby intended. Any alterations and further modifications of the inventive features illustrated herein, and any additional applications of the principles of the invention as illustrated herein, which would occur to one skilled in the relevant art and having possession of this disclosure, are to be considered within the scope of the invention.

[0141] Reference throughout this specification to "one embodiment," "an embodiment," or similar language means that a particular feature, structure, or characteristic described in connection with the embodiment is included in at least one embodiment of the present invention. Thus, appearances of the

[0133] Reference throughout this specification to features, advantages, or similar language does not imply that all of the features and advantages that may be realized with the present invention should be or are in any single embodiment of the invention. Rather, language referring to the features and advantages is understood to mean that a specific feature, advantage, or characteristic described in connection with an embodiment is included in at least one embodiment of the present invention. Thus, discussion of the features and advantages, and similar language, throughout this specification may, but do not necessarily, refer to the same embodiment.

[0134] Furthermore, the described features, advantages, and characteristics of the invention may be combined in any suitable manner in one or more embodiments. One skilled in the relevant art will recognize that the invention can be practiced without one or more of the specific features or advantages of a particular embodiment. In other instances, additional features and advantages may be recognized in certain embodiments that may not be present in all embodiments of the invention.

[0147] As used herein, "data", "binary data", "raw data" includes data of a generic binary type.

[0148] As used herein, "byte", "character" includes a sequence of 8 adjacent bits; which are operated on as a unit by a computer, and represents an integer from 0 to 255.

[0149] As used herein, "character text", "character data" includes single, double, or multiple byte characters.

[0150] As used herein, "base64", "shrunk", includes the character representation of data in a form any of the ISO W3C ect standards.

[0151] As used herein, "block" continuous, or set amount of continues raw, binary, character text, random byte or other type of data.

[0152] As used herein, "graphic data", "image data", "pixel data" includes any series of visually representative data.

[0153] "Digital signature", "Signtaure", "Notariization", "Digital Notarization", "Cosign", "Countersign", "XML DigSig", "XML Digital Signatures" includes any digital signature data.

[0154] "Envelope", "enveloping signature", "enveloped data" all reference the encompassment of a signature section or block of structured or non-structured data character(s).

[0155] "Raw", "raw data Block", "part of data", "data section", or "blob" means a section of data that is indiscriminant of its type, size, sign or other aspect or attribute of raw

[0156] As used herein, "standards" Standards - Put at its simplest, a standard is an agreed, repeatable way of doing something. It is a published document that contains a technical specification or other precise criteria designed to be used consistently as a rule, guideline, or definition. Standards help to make life simpler and to increase the reliability and the effectiveness of many goods and services we use. Bringing together the experience and expertise of all interested parties such as the producers, sellers, buyers, users and regulators of a particular material, product, process or service creates standards.

[0157] As used herein, “URL” is Universal Resource Locator.

DETAILED DESCRIPTION—FIRST EMBODIMENT—FIGS. 1

[0158] In the following description, for the purpose of explanation, numerous details are set forth, such as diagrams, file types, and arrangements, in order to provide an understanding of one or more embodiments of the present invention. However, it is and will be apparent to one skilled in the art that these specific details are not required in order to practice the present invention.

[0159] Certain embodiments of the securable independent electronic document may be constructed in the following fashion if desired. A text file and a graphics file may be opened simultaneously. Zero or more user files may be embedded into the text file. Security features such as checksums may then be computed on all and / or parts of the text file. The graphics file process may compute checksums or other security features on all and / or parts of the text file and / or all or parts of any embedded user files. The graphics file processing can be made to in essence to take one or more pictures of a visual representation of the text file and its embedded data and therefore these checksums and security features could vary from the security features computed by the text file process. The text file process and the graphics file process may then exchange and write the other process's security feature into its file. Both processes may then each engage in additional processing such as encryption and then compute and write another security feature perhaps by a different method than the prior checksum if desired. This procedure of security feature computation, security feature exchange and save of the other processes' security feature, and re-computation and save of a new security feature may then continue or both the text file and the graphics file may then close. Subsequent inspection of the security features, if allowed by the securable independent electronic document creator, could attest to tamper evidence in either or both of the text file or graphics file portions. Additionally, if allowed by the securable independent electronic document creator, visual validation may be available in either or both the text file and graphics file portions. A human and/or an OCR, or other type of pattern recognition software may make this visual check.

[0160] One embodiment as illustrated in **FIG 1A 100** has any User File **130** or none at all inside a [XML] markup file **120** and **140** enveloped by a [PNG] graphics file **110** and **150**. In **FIGS 1A** through **1E**, XML and PNG are shown as the markup and graphics files respectively, although in certain embodiments, other choices may exist for both. Either or both the [XML] markup file and the [PNG] graphics file may have intrinsic security features [CRC's]. As an example, **FIG 1F** shows a typical arrangement of a PNG data block or chunk with some data elements **191** through **195** and the security feature **196** at the end of the chunk. In the case of the PNG format, the data security feature takes the form of a cyclic redundancy check or CRC computed on the contents of that data chunk. In this and other file formats, other kinds, numbers, and placements of intrinsic and constructed security features may occur. Naturally, it is appreciated that variations are possible and considered within the scope of the example and embodiments.

[0161] In certain embodiments, either or both the [XML] markup file and the [PNG] graphics file may include zero or more Digital Signatures and / or Counter-Signatures of various forms. **FIGS 1B** and **1C** show as an example, typical PNG file header and file end sections respectively. In the case of the PNG file format, the structure of the file is quite flexible with regards to occurrence, number, and arrangement of data blocks or chunks after the IHDR chunk **FIG 1B.111** and before the IEND chunk **FIG 1C.159**. Continuation with an example of a use of the PNG file format in an embodiment, the markup language file and user file component, if any user files are included at all, may be inserted in zero or more Ztxt chunks **FIG 1B.113** and / or **FIG 1C.155**; and / or zero or more tEXT chunks **FIG 1B.114** and / or **FIG 1C.153**; and / or zero or more iTXT chunks **FIG 1B.115** and / or **FIG 1C.154**; and / or zero or more IDAT chunks **FIG 1B.117** and / or **FIG 1C.151**; and / or zero or more Other Sections **FIG 1B.116** and / or **FIG 1C.152**. In various embodiments, Digital Signatures **FIG 1B.112** may be added before the included data. In other embodiments, Digital Signatures **FIG 1C.156** may be added near the end of the graphics file. Still other embodiments may have Digital Signatures **FIG 1B.112** and **FIG 1C.156** both before and after the included file or no Digital Signatures at all in the graphics file portion.

[0162] Embodiments may also possess Digital Signatures in the markup file portion. As an example, in XML markup language, the World Wide Web Consortium (W3C) is just one organization that proposes and maintains standards and routines regarding Digital Signatures. Notarization elements and or files may also be included as appropriate.

[0163] The PNG file structure permits the inclusion **FIG 1B.113-116** and **FIG 1C.152-155** of several types of text data blocks or chunks and other optional types of data chunks in a file. Many of these kinds of data chunks are quite flexible as to what is precisely put into them. Various embodiments could place into these chunks information concerning advanced security features, encryption, digital rights, and / or other uses. In an example of a use of the PNG specification as the graphics file in an embodiment, the **FIG 1B.117** and **FIG 1C.151** IDAT chunks could also carry information concerning advanced security features, encryption, digital rights, and / or other uses as well. Furthermore, an embodiment that uses the PNG specification may also contain user created chunks fabricated within the rules of the specification for the purposes of advanced security, encryption, digital rights, and / or other uses as well as the pre-described chunk types.

[0164] Either or both the [XML] markup file and the [PNG] graphics file may include zero or more Optional Data Block[s] for any combination of the purposes of Advanced Security, Encryption[s], Rights, or other uses. Also, zero or more Notarizations and / or Counter-Signatures may be included. The file creator may retain, 3rd party archive, transmit, and or post the security feature[s], Digital Signatures, and Optional Data Block[s] as required. Notaries / Counter-Signers may retain, 3rd party archive, transmit, and or post as required. The embodiment receiver may check the security features [CRC's] and Digital Signatures, Notarizations, and Counter-Signatures as required. The embodiment receiver and intermediate handlers access the Optional Data Block[s] as required by the embodiment creator.

[0165] The markup file may also contain **FIG 1D.122** and **FIG 1E.141** optional sections and / or files. An embodiment could use these data to support any combination of advanced security, encryption, digital rights, non-repudiation (e.g., evidencing that a document was signed by a particular entity at a particular date and time), field validation (e.g., checking that information in a document complies with content category rules), and / or other uses as appropriate. In the case of the XML, the W3C maintains

routines to convert 8 bit data to 6 bit data and the inverse conversion 6 bit to 8 bit data with no losses of bits. These conversion routines may facilitate the inclusion of files within the markup portion of an embodiment although other conversion routines may be appropriate for certain applications.

[0166] When an originator has completed a securable independent electronic document, they may have access to several kinds of information they included and, perhaps, beyond what they put in. For their particular instance of an embodiment, there may exist zero or more files, CRCs', basic and / or advanced security features, encryption data, digital rights, digital signatures, notarizations, and other data.

[0167] FIG X and Xa show an electronic document using some of the combinations above. For instance, with the Power of Attorney electronic document shown in Fig X. the securable independent electronic document 100 has the graph 80, the text section 5, and data populating

[0168] In certain embodiments, it may appropriate for the originator to have access to none, some, or all of this information. They then may choose to retain, post, transmit to the receiver or third parties whatever portion of that information is reasonable or required. The receiver of a securable independent electronic document may have access to none, some, or all of the information about it or within it also. If reasonable or desired in certain embodiments, the receiver may verify information within and / or about a securable independent electronic document to check for evidence of tampering, validity, and other qualities. Embodiments may also permit one or more third parties to attest to the veracity of a securable independent electronic document.

[0169] Embodiments may be constructed that include an electronic representation of a legal document such as a bond, surety coupon, mortgage, or other legal document. The electronic document creator may then include one or more digital signatures in the markup language portion in accordance with guidelines set forth by the W3C XML digital signature recommendation of June 10, 2008 and / or other methods. It may be reasonably concluded that the markup language portion of a securable independent electronic document construction thus far conforms to often adopted standards and is within the scope of legal rules and regulation such as the UETA statute.

[0170] Intermediate participants such as witnesses, co-signers, counter-signers, notaries, authorizing / approving parties, and others may need only to conform to their requirements within rules and regulation to maintain the legal operability of the included legal document within a securable independent electronic document construct markup language file portion. In certain applications, when the outer graphics file portion of a securable independent electronic document construct readies to envelope the inner markup language file portion with its included document, additional steps may be taken.

[0171] It may be desirable to make any number of pictorial representations of the included document and / or its markup language component in part and / or in its entirety, which may be saved within the outer graphics file portion of a securable independent electronic document. Additional security features may also be computed on the whole or multiple parts of the inner markup language portion with the included document, which enhances the tamper evidence qualities of a securable independent electronic document.

[0172] Embodiments may be constructed having one or more securable independent electronic documents inside a securable independent electronic document. Other regular files may also be interspersed with securable independent electronic document's inside the outermost securable independent electronic document. Embedded securable independent electronic document's may also envelope further embedded securable independent electronic document's and other files. Embodiments may choose to work on the included document and its securable independent electronic document envelope in a easily readable plain-text form. An electronic document creator may construct a securable independent electronic document and then encrypt in its entirety. Information about the encryption may be stored in a second securable independent electronic document that may also contain the entire encrypted securable independent electronic document, some piece of it, or none at all. Encryption information, the encrypted whole or fragmented securable independent electronic document, which may also be inside other securable independent electronic document's, may then take separate routes to the electronic document receiver. The electronic document receiver may then decrypt and / or reconstruct all or part of the originally encrypted securable independent electronic document as appropriate.

## CONCLUSION, RAMIFICATIONS, AND SCOPE

[0173] Advantageously, the securable independent electronic document offers document creators, handlers, and recipients more opportunity and flexibility in selecting tools for data integrity, data security, data validation, data auditing, and support for other mission critical data processing needs.

[0174] The securable independent electronic document users are given the opportunity to create and / or acquire their own tools for document data processing operations. The above-mentioned tools are not necessarily limited in their scope of operation.

[0175] The document creators may be able to choose the level of interaction with outside third parties in document creation and handling.

[0176] The securable independent electronic document may be transmitted simply, such as an attachment to an email; and may be handled with tools common to the browser environment.

[0177] The signature block that contains a section for dynamic data, which is user data or other XML formatted type, including base64 MIME type of encoded data, which allows any random raw binary or character data to be inserted inside the signature block and therefore become candidate for digitally signing. Further, reference to an external object data block can be made, which therefore then includes the referenced material when the digital signature digest value is computed, even though the signed material may be outside the electronic document container.

[0178] Digital signatures can be presented in multiple forms. Adjacent, cosignatures or nested signatures enhance data integrity.

[0179] Digital signatures can be applied to both text and graphic image data sections. Multiple sections within a single text data section allow for digital signature operations to be done to both types of data sections.

[0180] Specific functionality on various types of graphic files allow for larger embedded sections. Further, additional types of data can be placed in the document, having other containment section compartments supporting other various data models. Further, these compartments can contain further

security measures, ensuring yet better containment validity, such as extended content digital signature capabilities.

[0181] The character portion of the container may contain a description of an image, in a graphic section. A graphic section can also contain an image of text, security features, encryption keys, access methods and rights, or other data. A graphic section can contain an interpreted key for a XML section. Example: A picture of a zebra could be coded image='ZEBRA', or other codeword, as well as 'embedded' values, such as a key chain. Either can be first to be created, having support by the other accordingly. In the case of creating the text first, the graphic can contain information (in graphic form), supporting original text information. Later, the text can then finish up with data supporting the graphical equivalent of the original text data to be protected.

[0182] Automated data, graphical data, and a host of other data types work to make the document securable. For example, a code word on the phone could go with a picture and be input to the automated processed text.

[0183] A wide variety of well-adopted applications already support the document.

[0184] Various encryption, security methods, or other technologies in existence, or possibly created in the future, may be implemented in the securable document container. This allows a flexible set of circumstances for enhanced document integrity.

[0185] Multiple page documents can be presented as a series of electronic documents, having the electronic document's contents independent of any header or ending container portions.

[0186] Image sections of the electronic document, its embedded documents or a combination of documents could be combined to present one totality picture. The data for these could be combined or otherwise accumulated accordingly to present a completed pictorial of the overall data environment.

[0187] Self type embedded documents support process flow and management.

[0188] Digital signatures use XML. The graphic image container PNG can support content digital signatures, which, with a specified data set, can present signatures further preserving data integrity.

[0189] Self type embedded documents support process flow and management.

[0190] Notarization or witnessing type of either acknowledgement or Juret based can be part of the document and would follow laws, statutes or other regulations in place to support commerce for a digital transaction. These laws have been in place since early 2000 for most states, having uniform acceptance to these laws commonly in place now.

[0191] Its copy is its original, having both the data and visual support included in a single container package.

[0192] Document is in its best archival state and requires no further processing for indefinite storage and retrieval needs.

[0193] Vendor verification allows for private ‘in house’ vendor specific trade secret secure, reliable confirmation. (Tumblers placed internally known only to internal processes, generating a result whose algorithmic generation is completely contained in vendors’ control.

[0194] With this single container, and the bounds of data limitless, the extra protection sought became more and more. Soon, security possibilities evolved. Usable features become to exist.

[0195] Although the description above contains many specificities, these should not be construed as limiting the scope of the embodiments but as merely providing illustrations of some of the presently preferred embodiments. For example, the document can have other purposes, such as , ect.

[0196] Thus, the scope of the embodiments should be determined by the appended claims and their legal equivalents, rather than by the examples given,

[0197] It is understood that the above-described embodiments are only illustrative of the application of the principles of the present ELECTRONIC DOCUMENT apparatus taught within. The electronic document may be embodied in other specific forms without departing from its spirit or essential characteristics. The described embodiments are to be considered in all respects only as illustrative and not restrictive. The scope of the document apparatus is, therefore, indicated by the appended claims

rather than by the foregoing descriptions. All changes, which come within the meaning and range of equivalency of the claims, are to be embraced within their scope.

[0198] Similarly, one skilled in the art would appreciate a postable resume complete with structured information concerning employment and other tangible data items that would be relative to an applicant’s qualifications.

[0199] As another example, it is envisioned that the electronic document could be that of an issued patent, or published application, having tangible data represented for automation means of cataloging or other reference. Alternately, correspondence could include control structure information supporting the office type actions and / or replies.

[0200] It is also envisioned a graphic image can present a picture that contains a required process or step. The character text could include validation or authentication text, which can include English type instructions, which describe the format of the data originally placed, or otherwise represented in the graphic form.

[0201] It is expected that there could be numerous variations of the design of this invention. For example, the graphic component may consist of colors, shapes, and other visual data. Further, the character text can incorporate multiple embedded documents, digital signature blocks, or other embedded and / or encoded data in any combination.

[0202] It is also expected that another design variation of the document would be an embodiment where there may be a receipt attached to the document, using self document type embedding, where an original order or other request is encompassed inside the receipt when the order or other request is fulfilled.

[0203] It is envisioned that the components of the electronic document and method may be constructed with a variety of information. For example, the character text component can included scripting, command language, or other digital represented formats. Further, its graphical component could include barcodes, object character recognition formatted data, as well as visually confirming data.

[0204] It is also to be realized that the components of the electronic document may be constructed of a variety of processes. In addition, component steps can be separated, each creating separate documents, and finally assembled together.

[0205] Finally, it is envisioned that the components of the electronic document may be constructed of a variety of procedures. For example, its creation could be in a controlled processing environment, with procedures creating individual sections of the document before final construction.

[0206] Thus, while the present invention has been fully described above, with particularity and detail in connection with what is presently deemed to be the most practical and preferred embodiment of the invention, it will be apparent to those of ordinary skill in the art that numerous modifications. Including, but not limited to, variations in size, materials, shape, form, function and manner of operation, assembly and use may be made, without departing from the principles and concepts of the invention as set forth in the claims.

That which is claimed is:

1. An information handling apparatus, said information handling apparatus consisting of:

a container, adapted for a plurality of data types of sectional components, said sectional components' comprising:

at least one data component,

wherein when said data component is comprised of a character text data type, said component comprises:

a character text data, said character text data coupled to:

a first interfacing means, wherein said character text data can be processed in an automated fashion in a computer system,

a second interfacing means, wherein said character text data comprises text characters, said characters are able to be interpreted and understood with human interaction,

a first referencing means, wherein said character text data can reference external file data using a uniform resource locator or identifier,

a first encoding means, wherein said character text data can be of an encoded type,

a first embedding means, wherein said character text data of said encoded type can contain filed data of any type, including that of said apparatus container, and

a first integrity means, wherein said character text data can be of an encrypted format; and

at least one additional sectional data component selected from a plurality of data types,

wherein when said data component is comprised of a graphical image data type, said component comprises:

a graphical image data, said graphical image data coupled to:

a third interfacing means, wherein said graphical image data can be digitally processed in an automated fashion in a computer graphic processing system,

a fourth interfacing means, wherein said graphical image data can be realized and perceived with human interaction, and

a second integrity means, wherein said graphical image data can be of an encrypted type;

said sectional component container coupled to:

a fifth interfacing means, wherein said container’s binary file format type allows direct, non-altered, single byte precision, original ‘incrementally-filed’ data handling and storage,

a first independence means, wherein said container’s sectional component’s creation, processing or storage can be independent of said container’s contents creation,

a third integrity means, wherein said container's sectional component's creation, processing or storage can be independent from intervention of said container's association,

a fourth integrity means, wherein said container's sectional component(s) coupled to other said container's sectional components(s) can include data integrity check information of said other container's sectional component(s),

a fifth integrity means, wherein said container's format of a normative standard type further allows said container's creation, processing and/or storage to be independent of intervention from additional party association,

a second independence means, wherein said container's format of a normative standard type further allows said container's creation, processing and/or storage to be independent of an additional required party or parties' interaction,

a third independence means, wherein said container's format of a normative standard type further allows said container's validation to be independent of an additional party or parties' interaction, and

a fourth independence means, wherein said container's format of a normative standard type further allows said container's creation, processing and/or storage to be independent of a computing platform type.

2. The information handling apparatus of Claim 1, having said character text data further comprising:

at least one character text digital signature data section(s), said character text digital signature data section(s) coupled to:

Patent Application of John Lewis Guymon Jr for  
“Securable Independent Electronic Document”  
Page 38

a digital signing means, wherein said character text digital signature data section type can be at least one of the following: (i) signature; (ii) co-signature; (iii) counter-signature.

3. The information handling apparatus of Claim 2, having said container further comprising:

at least one digital signature data component, said digital signature data component comprising:

at least one digital signature data section, said digital signature data coupled to:

a subsequent digital signing means, wherein said digital signature data type can be at least one of the following: (i) signature; (ii) co-signature; (iii) counter-signature.

4. The information handling apparatus of Claim 3, having said container's component sections' further comprising:

at least one hash check value, wherein said hash check value is computed for the said component section.

ABSTRACT:

In accordance with embodiments within, a securable independent electronic document apparatus is taught. With an authenticable and tamper detectable electronic container, elements and sections supporting platform, vendor and authentication independence, data sections and elements supporting, if user desired, digital signatures, data automation and nested embedding, graphical image data, and/or other types of data elements and sections supporting perceptual integrity and authenticity verification, and/or other free formatted data elements and sections supporting a plurality of types of data processing operations, and, if user desired, imaging representation comprised within a container using a securable and independent system. The securable independent electronic document apparatus presents solutions for the personal unique and interwoven creation and enhancement of user and document security and confidence in electronic data information's digital distribution, commerce, trade, publishing and/or exchange.

**Petition for Extension of Time To Reply**

June 5, 2012

Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

Sir/ Madam:

This applicant herewith petitions the Director of the United States Patent and Trademark Office to extend the time for reply to the Office Action dated (mailed) 3/6/2012 for 1 (One) month from June 6, 2012 to July 6, 2012.

Submitted and included herewith is a check (#1343) for \$75.00 (Seventy Five) to cover the cost of the extension.

(Small Entry)

Thank you for your time.

Very respectfully,

John Lewis Guymon Jr  
Tel: (801) 938-4833  
Msg: (801) 943-8461

**Certificate of Mailing**

I certify that this correspondence will be deposited with the United States Postal Service as Express Mail with proper postage affixed in an envelope addressed to: "Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450" on the 6<sup>th</sup> day of June 2012.

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

|                              |                                      |                                      |  |
|------------------------------|--------------------------------------|--------------------------------------|--|
| <b>Office Action Summary</b> | <b>Application No.</b><br>12/316,699 | <b>Applicant(s)</b><br>GUYMON ET AL. |  |
|                              | <b>Examiner</b><br>KAVEH ABRISHAMKAR | <b>Art Unit</b><br>2494              |  |

**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1)  Responsive to communication(s) filed on 15 December 2008.
- 2a)  This action is **FINAL**.
- 2b)  This action is non-final.
- 3)  An election was made by the applicant in response to a restriction requirement set forth during the interview on \_\_\_\_\_; the restriction requirement and election have been incorporated into this action.
- 4)  Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 5)  Claim(s) 1-4 is/are pending in the application.
- 5a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 6)  Claim(s) \_\_\_\_\_ is/are allowed.
- 7)  Claim(s) 1-4 is/are rejected.
- 8)  Claim(s) \_\_\_\_\_ is/are objected to.
- 9)  Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 10)  The specification is objected to by the Examiner.
- 11)  The drawing(s) filed on \_\_\_\_\_ is/are: a)  accepted or b)  objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 12)  The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 13)  Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).  
a)  All    b)  Some \*    c)  None of:  
1.  Certified copies of the priority documents have been received.  
2.  Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.  
3.  Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1)  Notice of References Cited (PTO-892)
- 2)  Notice of Draftperson's Patent Drawing Review (PTO-948)
- 3)  Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date 12/15/08, 4/03, 09, 8/20/10, 1/10/12, and 1/20/12.
- 4)  Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_.
- 5)  Notice of Informal Patent Application
- 6)  Other: \_\_\_\_\_.

### **DETAILED ACTION**

1. This action is in response to the communication filed on December 15, 2008. Claims 1-4 were originally received for consideration. No preliminary amendments for the claims have been received.
2. Claims 1-4 are currently pending consideration.

#### ***Information Disclosure Statement***

3. Initialed and dated copies of Applicant's IDS (form 1449), received on 12/15/08, 4/03, 09, 8/20/10, 1/10/12, and 1/20/12, have been attached to this Office Action.

#### ***Claim Objections***

Claims 1-14 objected to because of the following informalities: The Applicant employs the language "can be" in multiple instances. For example, in claim 1, the claims states that the container can be of normative standard format. The Examiner notes that this language can be construed as the container is capable of being of a normative standard. Further instances include, wherein the character text data can be of an encoded type, wherein the text data can be processed in an automated fashion, and wherein the graphical image data can be of an encrypted type. There are further instances which do not limit the particular limitations but just require that an element is capable of performing a certain function. Appropriate correction is recommended.

Art Unit: 2494

Claim 1 is objected to because of the following informalities: In the limitation containing “a fourth integrity means,” the limitation states “said container components can *included* data integrity check value information.” Examiner believes that this should read “said container components can *include* data integrity check value information.” Appropriate correction is required.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-4 rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01. The omitted structural cooperative relationships include interfacing means, referencing means, encoding means, embedding means, integrity means, independence means, and digital signing means. None of the aforementioned means have any structure defined in the specification.

Furthermore, Applicant is reminded that while features of an apparatus may be recited either structurally or functionally, claims directed to an apparatus must be distinguished from the prior art in terms of structure rather than function. >In re Schreiber, 128 F.3d 1473, 1477-78, 44 USPQ2d 1429,1431-32 (Fed. Cir. 1997) (The absence of a disclosure in a prior art reference relating to function did not defeat the Board’s finding of anticipation of claimed apparatus because the limitations at issue

Art Unit: 2494

were found to be inherent in the prior art reference); see also *In re Swinehart*, 439 F.2d 210, 212-13, 169 USPQ 226, 228-29 (CCPA 1971); < *In re Danly*, 263 F.2d 844, 847, 120 USPQ 528, 531 (CCPA 1959). “[A]pparatus claims cover what a device is, not what a device does.” *Hewlett-Packard Co. v. Bausch & Lomb Inc.*, 909 F.2d 1464, 1469, 15 USPQ2d 1525, 1528 (Fed. Cir. 1990) (emphasis in original).

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-14 are rejected under 35 U.S.C. 102(e) as being anticipated by Ginter et al. (U.S. Patent Pub. No. US 2003/0105721).

Regarding claim 1, Ginter discloses:

An information handling apparatus comprising:

a container, adapted for sectional components, said container can be of a normative standard format (paragraph 0084: *content container interoperability*);

at least one character data component, comprising:

Art Unit: 2494

a character text data, wherein said character text data can be of a normative standard format (paragraph 0138: *content*);

a first interfacing means, wherein said character text data can be processed in an automated fashion in a computer system (paragraph 0138: *content encryption*);

a second interfacing means, wherein said character text data can be interpreted and understood with human interaction (paragraph 0141: *content can include freely available information*);

a first referencing means, wherein said character text data can reference external file data a file using a uniform resource locator or identifier (paragraph 0900, 2241: *reference to where content is located with URL*);

a first encoding means, wherein said character text data can be of an encoded type (paragraph 0212, 0546: *encoding*);

a first embedding means, wherein said character text data can be of said encoded type format and can contain file data of any type (paragraph 0212: *embed data into container*); and

a first integrity means, wherein said character text data can be of an encrypted format (paragraph 0220: *encrypt content*);

at least one graphical image data component, comprising: a graphical image data component (paragraph 1540: *content can include image data*);

a third interfacing means, wherein said graphical image data can be digitally processed in an automated fashion in a computer graphic processing system (paragraph 1545);

Art Unit: 2494

a fourth interfacing means, wherein said graphical image data can be realized and perceived with human interaction (paragraph 1545); and

a second integrity means, wherein said graphical image data can be of an encrypted type (paragraph 1545);

at least one overall data integrity check value (paragraph 1783: *public key is used for integrity verification*);

a fifth interfacing means, wherein said containers default file data format is of a binary type (paragraph 0084);

a first independence means, wherein said containers sectional components creation, processing or storage can be independent of said containers contents creation (paragraph 0084);

a third integrity means, wherein said containers sectional components creation, processing or storage can be independent of an intervention from said containers association (paragraph 0084);

a fourth integrity means, wherein said containers sectional components can included data integrity check value information of other said container sectional components (paragraph 0084);

a fifth integrity means, wherein having said containers format be of a normative standard type further allows said containers creation, processing or storage to be independent of an intervention from additional party association (paragraph 0084);

Art Unit: 2494

a second independence means, wherein having said containers format be of a normative standard type further allows said containers creation, processing or storage to be independent of an additional required party interaction (paragraph 0084);

a third independence means, wherein having said containers format be of a normative standard type further allows said containers validation to be independent of an additional party interaction (paragraph 0084); and

a fourth independence means, wherein having said container have a format of a normative standard type further allows said container to be created, processed or stored independent of a computer system platform medium type (paragraph 0084).

Claim 2 is rejected as applied above in rejecting claim 1. Furthermore, Ginter discloses:

The apparatus of claim 1, having said character data component further comprising:

a first digital signing means, wherein said character text data can be digitally signed, cosigned and countersigned (paragraph 0173, 1742: *digital signature*).

Claim 3 is rejected as applied above in rejecting claim 2. Furthermore, Ginter discloses:

The apparatus of claim 2, having said container further comprising:

at least one or more digital signature data components (paragraph 0173, 1742);

digital signing means, wherein said digital signature component type can be one of a signature, cosignature and countersigner type (paragraph 0173, 1742).

Art Unit: 2494

Claim 4 is rejected as applied above in rejecting claim 3. Furthermore, Ginter discloses:

The apparatus of claim 3, having said container component sections further comprising:

at least one hash check value, wherein said hash check value is computed for the said component section (paragraph 0713, 1742).

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to KAVEH ABRISHAMKAR whose telephone number is (571)272-3786. The examiner can normally be reached on Monday thru Friday 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jung Kim can be reached on 571-272-3804. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
